Foreword

POCKET STATISTICS is published for the use of NASA managers and their staff. Included is Administrative and Organizational information, summaries of Space Flight Activity including the NASA Major Launch Record, and NASA Procurement, Financial and Manpower data.

The NASA Major Launch Record includes all launches of Scout class and larger vehicles. Vehicle and spacecraft development flights are also included in the Major Launch Record. Shuttle missions are counted as one launch and one payload, where free flying payloads are not involved. Satellites deployed from the cargo bay of the Shuttle and placed in a separate orbit or trajectory are counted as an additional payload.

POCKET STATISTICS is published for limited distribution. Requests for copies of this document should be sent to NASA Headquarters, Office of Management Systems and Facilities, NASA History Office (Code JCH). Changes or deletions to the distribution list may be made by phone to (202) 358-0384.

Excerpts From The National Aeronautics And Space Act Of 1958, As Amended

AN ACT To provide for research into problems of flight within and outside the Earth's atmosphere, and for other purposes.

Declaration Of Policy And Purpose

Sec. 102 (a) The Congress hereby declares that it is the policy of the United States that activities in space should be devoted to peaceful purposes for the benefit of all mankind.

(b) The Congress declares that the general welfare and security of the United States require that adequate provision be made for aeronautical and space activities. The Congress further declares that such activities shall be the responsibility of, and shall be directed by, a civilian agency exercising control over aeronautical and space activities sponsored by the United States, except that activities peculiar to or primarily associated with the development of weapons systems, military operations, or the defense of the United States (including the research and development necessary to make effective provision for the defense of the United States) shall be the responsibility of, and shall be directed by, the Department of Defense; and that determination as to which such agency has responsibility for and direction of any such activity shall be made by the President in conformity with section 201(e).

(c) The Congress declares that the general welfare of the United States requires that the National Aeronautics and Space Administration (as established by title 11 of this act) seek and encourage to the maximum extent possible the fullest commercial use of space.

(d) The aeronautical and space activities of the United States shall be conducted so as to contribute materially to one or more of the following objectives:

- (1) The expansion of human knowledge of phenomena in the atmosphere and space;
- (2) The improvement of the usefulness, performance, speed, safety, and efficiency of aeronautical and space vehicles;
- (3) The development and operation of vehicles capable of carrying instruments, equipment, supplies, and living organisms through space;
- (4) The establishment of long-range studies of the potential benefits to be gained from the opportunities for, and the problems involved in the utilization of aeronautical and space activities for peaceful and scientific purposes;
- (5) The preservation of the role of the United States as a leader in aeronautical and space science and technology and in the application thereof to the conduct of peaceful activities within and outside the atmosphere;
- (6) The making available to agencies directly concerned with national defense of discoveries that have military value or significance, and the furnishing by such agencies, to the civilian agency established to direct and control nonmilitary aeronautical and space activities, of information as to discoveries which have value or significance to that agency;

Excerpts From The National Aeronautics And Space Act Of 1958, As Amended

Declaration Of Policy And Purpose (Continued)	Functions Of The Administration
<p>(7) Cooperation by the United States with other nations and groups of nations in work done pursuant to this Act and in the peaceful application of the results thereof; and</p> <p>(8) The most effective utilization of the scientific and engineering resources of the United States, with close cooperation among all interested agencies of the United States in order to avoid unnecessary duplication of effort, facilities, and equipment.</p> <p>(9) The Congress declares that the general welfare of the United States requires that the unique competence in scientific and engineering systems of the National Aeronautics and Space Administration also be directed toward ground propulsion systems research and development.</p> <p>(10) The Congress declares that the general welfare of the United States requires that the unique competence in scientific and engineering systems of the National Aeronautics and Space Administration also be directed toward the development of advanced automobile propulsion systems.</p> <p>(11) The Congress declares that the general welfare of the United States requires that the unique competence in scientific and engineering systems of the National Aeronautics and Space Administration also be directed to assisting in bioengineering research, development, and demonstration programs designed to alleviate and minimize the effects of disability.</p>	<p>Sec. 203 (a) The Administration, in order to carry out the purpose of this Act, shall -</p> <p>(1) plan, direct, and conduct aeronautical and space activities;</p> <p>(2) arrange for participation by the scientific community in planning scientific measurements and observations to be made through use of aeronautical and space vehicles, and conduct or arrange for the conduct of such measurements and observations; and</p> <p>(3) provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof.</p> <p>(b) (1) The Administration shall, to the extent of appropriated funds, initiate, support, and carry out such research, development, demonstration, and other related activities in ground propulsion technologies.</p> <p>(2) The Administration shall initiate, support, and carry out such research, development, demonstration, and other related activities in solar heating and cooling technologies (to the extent that funds are appropriated therefor).</p>

National Space Policy

On November 2, 1989, the President approved a national space policy that updates and reaffirms U.S. goals and activities in space. The policy is the result of a review undertaken by the National Space Council. The revisions clarify, strengthen, and streamline selected aspects of the policy. Areas affected include civil and commercial remote sensing, space transportation, space debris, federal subsidies of commercial space activities, and Space Station Freedom.

Overall, the President's national space policy revalidates the ongoing direction of U.S. space efforts and provides a broad policy framework to guide future U.S. space activities.

The policy reaffirms the nation's commitment to the exploration and use of space in support of our national well being. United States leadership in space continues to be a fundamental objective guiding U.S. space activities. The policy recognizes that leadership requires United States preeminence in key areas of space activity critical to achieving our national security, scientific, technical, economic, and foreign policy goals. The policy also retains the long-term goal of expanding human presence and activity beyond Earth orbit into the Solar System. This goal provides the overall policy framework for the President's human space exploration initiative, announced July 20, 1989, in which the President called for completing Space Station Freedom, returning permanently to the Moon, and exploration of the planet Mars.

INTRODUCTION

United States space activities are conducted by three separate and distinct sectors: two strongly interacting governmental sectors (Civil and National Security) and a separate, non-governmental Commercial Sector. Close coordination, cooperation, and technology and information exchange will be maintained among these sectors to avoid unnecessary duplication and promote attainment of United States space goals.

GOALS AND PRINCIPLES

A fundamental objective guiding United States space activities has been, and continues to be, space leadership. Leadership in an increasingly competitive international environment, does not require United States preeminence in all areas and disciplines of space enterprise. It does require United States preeminence in the key areas of space activity critical to achieving our national security, scientific, technical, economic, and foreign policy goals.

- The overall goals of United States space activities are: (1) to strengthen the security of the United States; (2) to obtain scientific, technological and economic benefits for the general population and to improve the quality of life on Earth through space-related activities; (3) to encourage continuing United States private-sector investment in space and related activities; (4) to promote international cooperative activities taking into account United States national security, foreign policy, scientific, and economic interests; (5) to cooperate with other nations in maintaining the freedom of space for all activities that enhance the security and welfare of mankind; and, as a long-range goal, (6) to expand human presence and activity beyond Earth orbit into the solar system.

- The United States space activities shall be conducted in accordance with the following principles:

- The United States is committed to the exploration and use of outer space by all nations for peaceful purposes and for the benefit of all mankind. "Peaceful purposes" allow for activities in pursuit of national security goals.
- The United States will pursue activities in space in support of its inherent right of self-defense and its defense commitments to its allies.

National Space Policy

<ul style="list-style-type: none">• The United States rejects any claims to sovereignty by any nation over outer space or celestial bodies, or any portion thereof, and rejects any limitations on the fundamental right of sovereign nations to acquire data from space.• The United States considers the space systems of any nation to be national property with the right of passage through and operators in space without interference. Purposeful interference with space systems shall be viewed as an infringement on sovereign rights.• The United States shall encourage and not preclude the commercial use and exploitation of space technologies and systems for national economic benefit. These commercial activities must be consistent with national security interests, and international and domestic legal obligations.• The United States will, as a matter of policy, pursue its commercial space objectives without the use of direct Federal subsidies.• The United States shall encourage other countries to engage in free and fair trade in commercial space goods and services.• The United States will conduct international cooperative space-related activities that are expected to achieve sufficient scientific, political, economic, or national security benefits for the nation. The United States will seek mutually beneficial international participation in space and space-related programs.	<p>CIVIL SPACE POLICY</p> <ul style="list-style-type: none">• The United States civil space sector activities shall contribute significantly to enhancing the Nation's science, technology, economy, pride, sense of well-being and direction, as well as United States world prestige and leadership. Civil sector activities shall comprise a balanced strategy of research, development, operations, and technology for science, exploration, and appropriate applications.• The objectives of the United States civil space activities shall be (1) to expand knowledge of the Earth, its environment, the solar system, and the universe; (2) to create new opportunities for use of the space environment through the conduct of appropriate research and experimentation in advanced technology and systems; (3) to develop space technology for civil applications and, wherever appropriate, make such technology available to the commercial sector; (4) to preserve the United States preeminence in critical aspects of space science, applications, technology, and manned space flight; (5) to establish a permanently manned presence in space; and (6) to engage in international cooperative efforts that further United States overall space goals. <p>COMMERCIAL SPACE POLICY</p> <p>The United States government shall not preclude or deter the continuing development of a separate non-governmental Commercial Space Sector. Expanding private sector investment in space by the market-driven Commercial Sector generates economic benefits for the Nation and supports Governmental Space Sectors with an increasing range of space goods and services. Governmental Space Sectors shall purchase commercially available space goods and services to the fullest extent feasible and shall not conduct activities with potential commercial applications that preclude or deter Commercial Sector</p>
--	---

National Space Policy

space activities except for national security or public safety reasons. Commercial Sector space activities shall be supervised or regulated only to the extent required by law, national security, international obligations, and public safety.

NATIONAL SECURITY SPACE POLICY

The United States will conduct those activities in space that are necessary to national defense. Space activities will contribute to national security objectives by (1) deterring, or if necessary, detaching against enemy attack; (2) assuring that forces of hostile nations cannot prevent our own use of space; (3) negating, if necessary, hostile space systems; and (4) enhancing operations of United States and Allied forces. Consistent with treaty obligations, the national security space program shall support such functions as command and control, communications, navigation, environmental monitoring, warning, surveillance, and force application (including research and development programs which support these functions).

INTER-SECTOR POLICIES

This section contains policies applicable to, and binding on, the national security and civil space sectors.

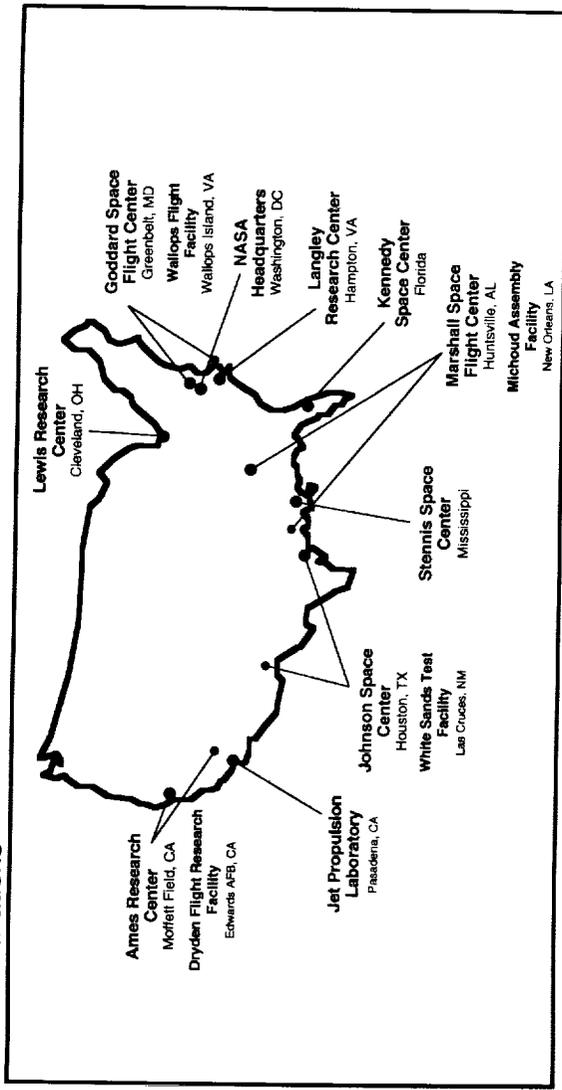

- The United States Government will maintain and coordinate separate national security and civil operational space systems where differing needs of the sectors dictate.
- Survivability and endurance of national security space systems, including all necessary system elements, will be pursued commensurate with the planned use in crisis and conflict, with the threat, and with the availability of other assets to perform the mission.

- Government sectors shall encourage to the maximum extent feasible, the development and use of United States private sector space capabilities.
- A continuing capability to remotely sense the Earth from space is important to the achievement of United States space goals. To ensure that the necessary capability exists, the United States government will: (a) ensure the continuity of LANDSAT-type remote sensing data; (b) discuss remote sensing issues and activities with foreign governments operating or regulating the private operation of remote sensing systems; (c) continue government research and development for future advanced remote sensing technologies or systems; and (d) encourage the development of commercial systems, which image the Earth from space, competitive with, or superior to, foreign-operated civil or commercial systems.
- Assured access to space, sufficient to achieve all United States space goals, is a key element of national space policy. United States space transportation systems must provide a balanced, robust, and flexible capability with sufficient resiliency to allow continued operations despite failures in any single system. The United States government will continue research and development on component technologies in support of future transportation systems. The goals of United States space transportation policy are: (1) to achieve and maintain safe and reliable access to, transportation in, and return from, space; (2) to exploit the unique attributes of manned and unmanned launch and recovery systems; (3) to encourage to the maximum extent feasible, the development and use of United States private sector space transportation capabilities; and (4) to reduce the costs of space transportation and related services.
- Communications advancements are critical to all United States space sectors. To ensure necessary capabilities exist, the United States

National Space Policy

<p>government will continue research and development efforts for future advanced space communications technologies.</p> <ul style="list-style-type: none"> • The United States will consider and, as appropriate, formulate policy positions on arms control measures governing activities in space, and will conclude agreements on such measures only if they are equitable, effectively verifiable, and enhance the security of the United States and our allies. • All space sectors will seek to minimize the creation of space debris. Design and operations of space tests, experiments, and systems will strive to minimize or reduce accumulation of space debris consistent with mission requirements and cost effectiveness. The United States government will encourage other space-faring nations to adopt policies and practices aimed at debris minimization. 	<p>Administrator of the National Aeronautics and Space Administration. The Chairman, from time to time, invites the Chairman of the Joint Chiefs of Staff, the heads of executive agencies, and other senior officials to participate in meetings of the Council.</p> <p>NATIONAL SPACE LAUNCH STRATEGY</p> <p>The National Space Launch Strategy is composed of four elements.</p> <ul style="list-style-type: none"> • Ensuring that existing space launch capabilities, including support facilities, are sufficient to meet U.S. Government manned and unmanned space launch needs. • Developing a new unmanned, but man-rateable, space launch system to greatly improve national launch capability with reductions in operating costs and improvements in launch system reliability, responsiveness, and mission performance. • Sustaining a vigorous space launch technology program to provide cost effective improvements to current launch systems, and to support development of advanced launch capabilities, complementary to the new launch system. • Actively considering commercial space launch needs and factoring them into decisions on improvements in launch facilities and launch vehicles. <p>These strategy elements will be implemented within the overall resource and policy guidance provided by the President.</p>
<p>IMPLEMENTING PROCEDURES</p> <p>Normal interagency procedures will be employed wherever possible to coordinate the policies enunciated in this directive.</p> <p>Executive Order No. 12675 established the National Space Council to provide a coordinated process for developing a national space policy and strategy and for monitoring its implementation.</p> <p>The Vice President serves as the Chairman of the Council, and as the President's principal advisor on national space policy and strategy. Other members of the Council are the Secretaries of State, Treasury, Defense, Commerce, and Transportation; the Chief of Staff to the President; the Director of the Office of Management and Budget; the Assistant to the President for Science and Technology; the Director of Central Intelligence; and the</p>	<p>These strategy elements will be implemented within the overall resource and policy guidance provided by the President.</p>

NASA Installations

NASA Installations

<p>NASA HEADQUARTERS Washington, DC 20546</p> <p>NASA Headquarters exercises management over the space flight centers, research centers, and other installations that constitute the National Aeronautics and Space Administration.</p> <p>Responsibilities of Headquarters cover the determination of programs and projects; establishment of management policies, procedures and performance criteria; evaluation of progress; and the review and analysis of all phases of the aerospace program.</p> <p>Planning, direction, and management of NASA's research and development programs are the responsibility of the program offices which report to and receive overall guidance and direction from an associate or assistant administrator.</p> <p>AMES RESEARCH CENTER Moffett Field, CA 94035</p> <p>Ames Research Center was founded in 1939 as an aircraft research laboratory by the National Advisory Committee for Aeronautics (NACA) and was named for Dr. Joseph S. Ames, Chairman of NACA from 1927 to 1939. In 1958, Ames became part of NASA, along with other NACA installations and certain Department of Defense facilities. In 1981, NASA merged Ames with the Dryden Flight Research Facility.</p> <p>Ames specializes in scientific research, exploration and applications aimed toward creating new technology for the nation.</p>	<p>The center's major program responsibilities are concentrated in computer science and applications, computational and experimental aerodynamics, flight simulation, flight research, hypersonic aircraft, rotorcraft and powered-lift technology, aeronautical and space human factors, life sciences, space sciences, solar system exploration, airborne science and applications, and infrared astronomy.</p> <p>HUGH L. DRYDEN FLIGHT RESEARCH FACILITY Edwards, CA 93523</p> <p>Since 1947, Ames-Dryden has developed a unique and highly specialized capability for conducting flight research programs. Its test organization, consisting of pilots, scientists, engineers, technicians and mechanics, is unmatched anywhere in the world. This versatile organization has demonstrated its capability, not only with high-speed research aircraft, but also with such unusual flight vehicles as the Lunar Landing Research Vehicle and the wingless lifting bodies.</p> <p>The facility's primary research tools are research aircraft, ranging from a B-52 carrier aircraft and high performance jet fighters to the X-29 forward swept wing aircraft. Ground-based facilities include a high temperature loads calibration laboratory that allows ground-based testing of complete aircraft and structural components under the combined effects of loads and heat; a highly developed aircraft flight instrumentation capability; a flight systems laboratory with a diversified capability for avionics system fabrication, development and operations; a flow visualization facility that allows basic flow mechanics to be seen of models or small components; a data analysis facility for processing of flight research data; a remotely piloted research vehicles facility and a test range communications and data transmission capability that links NASA's Western Aeronautical Test Range facilities at Ames-Moffett, Crows Landing and Ames-Dryden.</p>

NASA Installations

GODDARD SPACE FLIGHT CENTER Greenbelt, MD 20771

This NASA field center has put together a multitalented spacecraft team -- engineers, scientists, technicians, project managers and support personnel -- which is extending the horizons of human knowledge not only about the solar system and the universe but also about our Earth and its environment.

The Goddard mission is being accomplished through scientific research centered in six space and Earth science laboratories and in the management, development and operation of several near-Earth space systems.

After being launched into space, satellites fall under the 24-hour-a-day surveillance of a worldwide ground and spaceborne communications network, the nerve center of which is located at Goddard. One of the key elements of that network is the Tracking and Data Relay Satellite System (TDRSS) with its orbiting Tracking and Data Relay Satellite and associated ground tracking stations.

Goddard's tracking responsibility extends to its Wallops Flight Facility. Wallops prepares, assembles, launches, and tracks satellites and suborbital space vehicles and manages the National Scientific Balloon Facility in Palestine, Texas.

JET PROPULSION LABORATORY Pasadena, CA 91109

NASA's Jet Propulsion Laboratory (JPL) is a government-owned facility staffed by the California Institute of Technology. JPL operates under a NASA contract administered by the NASA Pasadena Office. In addition to the Pasadena site, JPL operates the Deep Space Communications Complex, a station of the worldwide Deep Space Network (DSN).

The laboratory is engaged in activities associated with deep space automated scientific missions -- engineering subsystem and instrument development, and data reduction and analysis required by deep space flight.

The laboratory also designs and tests flight systems, including complete spacecraft, and provides technical direction to contractor organizations.

LYNDON B. JOHNSON SPACE CENTER Houston, TX 77058

Johnson Space Center was established in September 1961 as NASA's primary center for design, development and testing of spacecraft and associated systems for manned flight; selection and training of astronauts; planning and conducting manned missions; and extensive participation in the medical engineering and scientific experiments carried aboard space flights.

Johnson has program management responsibility for the Space Shuttle program, the nation's current manned space flight program. Johnson also has a major responsibility for the development of the Space Station, a permanently manned, Earth-orbiting facility to be constructed in space and operable within a decade. The center will be responsible for the interfaces between the Space Station and the Space Shuttle.

JOHN F. KENNEDY SPACE CENTER Kennedy Space Center, FL 32899

Kennedy Space Center (KSC) was created in the early 1960's to serve as the launch site for the Apollo lunar landing missions. After the Apollo program ended in 1972, Kennedy's Complex 39 was used for the launch of the Skylab spacecraft, and later, the Apollo spacecraft for the Apollo Soyuz Test Project.

NASA Installations

Kennedy Space Center serves as the primary center within NASA for the test, checkout and launch of payloads and space vehicles. This presently includes launch of manned and unmanned vehicles at Kennedy, the adjacent Cape Canaveral Air Force Station, and at Vandenberg Air Force Base in California.

The center is responsible for the assembly, checkout and launch of Space Shuttle vehicles and their payloads, landing operators and the turn-around of Space Shuttle orbiters between missions, as well as preparation and launch of unmanned vehicles.

LANGLEY RESEARCH CENTER Hampton, VA 23665-5225

Langley's mission is basic research in aeronautics and space technology. Major research fields include aerodynamics, materials, structures, flight controls, information systems, acoustics, aerostatistics, atmospheric sciences, and nondestructive evaluation. Langley's goal is to develop technologies to enable aircraft to fly faster, farther, safer, and to be more maneuverable, quieter, less expensive to manufacture, and more energy efficient.

The majority of Langley's work is in aeronautics, working to improve today's aircraft and to develop concepts and technology for future aircraft. Over 40 wind tunnels, other unique research facilities, and testing techniques as well as computer modeling capabilities aid in the investigation of the full flight range, from general aviation and transport aircraft through hypersonic vehicles.

Researchers also study atmospheric and Earth sciences, develop technology for advanced space transportation systems, conduct research in laser energy conversion techniques for space applications and provide the focal point for design studies for large space systems technology and Space Station activities.

Langley also manages an extensive program in atmospheric sciences to better understand the origins, chemistry, and transport mechanisms that govern the Earth's atmospheric data using aircraft, balloon, and land- and space-based remote sensing instruments designed, developed, and fabricated at Langley.

LEWIS RESEARCH CENTER Cleveland, OH 44135

Lewis Research Center was established in 1941 by the National Advisory Committee for Aeronautics (NACA). Named for George W. Lewis, NACA's Director of Research from 1924 to 1947, the center developed an international reputation for its research on jet propulsion systems.

Lewis is NASA's lead center for research, technology and development in aircraft propulsion, space propulsion, space power and satellite communication.

The center has been advancing propulsion technology to enable aircraft to fly faster, farther and higher and also focused its research on fuel economy, noise abatement, reliability, and reduced pollution.

Lewis has responsibility for developing the largest space power system ever designed to provide the electrical power necessary to accommodate the life support systems and research experiments to be conducted aboard the Space Station. In addition, the center will support the Station in other major areas such as auxiliary propulsion systems and communications.

Lewis is the home of the Microgravity Materials Science Laboratory, a unique facility to qualify potential space experiments. Other facilities include a zero-gravity drop tower, wind tunnels, space tanks, chemical rocket thrust stands, and chambers for testing jet engine efficiency and noise.

NASA Installations

MARSHALL SPACE FLIGHT CENTER Marshall Space Flight Center, AL 35812

George C. Marshall Space Flight Center (MSFC) was formed on July 1, 1960, by the transfer to NASA of buildings and personnel comprising part of the U.S. Army Ballistic Missile Agency. Named for the famous soldier and statesman, General of the Army George C. Marshall, it was officially dedicated by President Dwight D. Eisenhower on September 8, 1960.

Marshall is a multiproject management, scientific and engineering establishment with much emphasis on projects involving scientific investigation and application of space technology to the solution of problems on Earth.

In helping to reach the nation's goals in space, the center is working on many projects. Marshall had a significant role in the development of the Space Shuttle. It provides the orbiter's engines, the external tank that carries liquid hydrogen and liquid oxygen for those engines, and the solid rocket boosters that assist in lifting the Shuttle orbiter from the launch pad.

The center also plays a key role in the development of payloads to be flown aboard the Shuttle. One such payload is Spacelab, a reusable, modular scientific research facility carried in the Shuttle's cargo bay.

Marshall also is committed to the investigation of materials processing in space, which, in a gravity-free environment, promises to provide opportunities for understanding and improving Earth-based processes and for the formulation of space-unique materials. Exciting new techniques in materials processing have already been demonstrated in past Spacelab missions, such as the formation of alloys from normally immiscible products, and the growth of near-perfect large crystals impossible to grow on Earth.

MICHOUD ASSEMBLY FACILITY New Orleans, LA 70189

The primary mission of the Michoud Assembly Facility is the systems engineering, engineering design, manufacture, fabrication, assembly, and related work for the Space Shuttle external tank. Marshall Space Flight Center exercises overall management control of the facility.

JOHN C. STENNIS SPACE CENTER Stennis Space Center, MS 39529

The John C. Stennis Space Center (SSC) has grown into NASA's premier center for testing large rocket propulsion systems for the Space Shuttle and future generation space vehicles. Additionally, the center has developed into a scientific community actively engaged in research and development programs involving space, oceans, and the Earth.

The main mission of SSC is support the development testing of large propulsion systems for the Space Shuttle, Advanced Launch System, and the Advanced Solid Rocket Motor programs.

WALLOPS FLIGHT FACILITY Wallops Island, VA 23337

Established in 1945, Wallops Flight Facility, a part of the Goddard Space Flight Center, is one of the oldest launch sites in the world. Wallops manages and implements NASA's sounding rocket program and the Scientific Balloon Program. The facility operates and maintains the Wallops launch range and data acquisition facilities. Approximately 100 rocket launches are conducted each year from the Wallops Island site.

The Year in Review

NASA Management

Daniel S. Goldin became the ninth Administrator of NASA on April 1, 1992, appointed by President Bush to succeed Richard H. Truly. Prior to joining the agency, Goldin was Vice President and General Manager of the TRW Space & Technology Group.

Goldin assumed command at a time of shrinking financial resources caused by the recession, the deficit reduction effort and growing demands in other areas such as education, medical care and housing. Forecasts indicated that NASA would not receive appropriations sufficient to support on-year development of projects initiated prior to the recession.

Goldin initiated a series of efforts to respond to the situation with the goal of preserving essential space exploration and aeronautics research programs despite cost reductions, while permitting the nation to undertake new projects in both areas. Simultaneously, he launched campaigns to reform the agency's procurement process, introduce greater cultural diversity into the workforce and, contractually, renew NASA's commitment to quality and stimulate public support for the programs.

'Cheaper, Faster, Better'

Constantly urging NASA employees and contractors alike to do things "cheaper, faster and better," Goldin created blue and red teams to review NASA projects and their organizational settings. The blue teams consisted of persons who would examine their own programs for creative ways to reduce costs without compromising safety or science. The red teams were composed of people unconnected with the programs who might bring fresh insights or insure that none were stifled. The review began in May and has led to significant changes in a number of major projects, with a 17 percent reduction in costs thus far. The process is intended to be ongoing. In a closely related effort, Goldin stressed the adoption of the approaches and tools of Total Quality Management (TQM) which calls for a continuous effort to improve quality, reduce costs and speed production.

A 'Shared Vision' of the Future

Soon after the formation of the blue and red teams, Goldin called on NASA employees to submit their ideas for a NASA "Shared Vision of what we, as a nation, should strive to accomplish in space."

Closely coupled with this was a series of well-attended "town meetings" held in cities throughout the country to give the general public the opportunity to state its view about the future of the space program. The goal of these activities was to produce a vision of America's future in space that would be shared and supported by NASA, Congress, the President and executive branch, academia, the space community and the general public.

Another major effort aimed at insuring quality and controlling costs was a series of procurement reforms. Awards would be made on the basis of well-demonstrated adherence to quality, cost control and schedule maintenance. Award fees would be determined on the same basis, with opportunity for greater gain by staying on schedule and within estimates. The reforms emphasized opportunities for small and disadvantaged businesses, including culturally diverse businesses.

The Administrator also underscored the need for greater cultural diversity in the agency's workforce, requiring the head of each NASA facility to submit a plan to increase minority hiring. Goldin said he wanted NASA to reflect the nation's wonderful mosaic of diverse people, and to signal opportunity to young people of all races.

In October, Goldin announced structural changes in the agency's organization to focus greater attention on certain projects critical to the nation's future. Plans to send a mission to Planet Earth to aid the environment would become an individual office as would planetary science and astrophysics, or Mission From Planet Earth, to explore the solar system and look beyond into the universe.

Concern About America's Aeronautics Industry

Aeronautics and space technology development, which were combined in a single office, went to be separated. Goldin stated that the nation's aeronautics industry was losing ground to aggressive foreign competitors to such a degree that it was in a crisis. He declared that NASA would place a substantially greater emphasis on aeronautics and that the sole responsibility of the Aeronautics Office. Technology was joined to the commercial development function in a "co-research stopper" concept to serve both NASA and private industry. The goal is to speed the introduction of new technology throughout the space program and to enhance the process of export to American industry which, in the past, has led to thousands of new commercial products and processes.

The Year in Review

Golden maintained an aggressive schedule of speaking throughout the country on a large variety of subjects. Of particular prominence was the effort to explain and win support for a return to the moon and exploration of Mars; to win new congressional funding for Space Station Freedom; to explain the value of the space program as a national investment in robust technological leadership and hence a competitive edge; and to proclaim the need for far greater international cooperation in space to continue the exploration of the universe beyond planet Earth.

In the latter regard, the Administrator represented the nation in signing historic new agreements with the Soviet Union that will expand considerably space cooperation between the two nations. The agreements provide for the exchange of astronauts and cosmonauts on space flights, study of a Russian vehicle for possible emergency crew return from Space Station Freedom, a Shuttle-Mir Space Station link-up, and life sciences and robotic exploration activities.

Space Science

Exploring the Universe

Highlights of 1992 discoveries made by the Hubble Space Telescope (HST), Compton Observatory, Cosmic Background Explorer (COBE), Roentgen Satellite (ROSAT), and Extreme Ultraviolet Explorer (EUVE) are listed below, by astronomical object.

Planets

- Conducting long-term observations of global weather changes on Mars (HST).
- Measured the extent of the atmosphere of the Jovian moon Io and looked for surface changes (HST).

Stellar Evolution

- Provided the first clear view of one of the hottest known stars (360,000 degrees Fahrenheit), which lies at the center of the Butterfly Nebula, NGC 2440 (HST).

Star Clusters

- Discovered a cataclysmic variable star in the core of globular cluster 47 Tucanae, the first known optical counterpart to an x-ray source in a globular cluster (HST).

Stars

- Detected several sources of extreme ultraviolet light through interstellar gas and dust, including the corona of a star, a white dwarf companion star and red dwarf stars (EUVE).
- Discovered unexpected "gamma ray afterglow" on the sun. A strong emission of high-energy gamma rays persisted for more than 5 hours after a solar flare explosion (Compton).

Pulsars

- Solved 20-year old mystery about the power source of Geminga, a gamma ray pulsar, which was found to be a 300,000 year-old rotating neutron star (ROSAT, Compton).

Galaxies

- Uncovered circumstantial evidence for the presence of a massive black hole in the core of the neighboring galaxy M32 as well as the giant elliptical galaxy M87 (HST).
- Provided the first direct view of an immense ring of dust which may lie a massive black hole at the heart of the giant elliptical galaxy NGC 4281 and the spiral galaxy M51 (HST).
- Detected for the first time high-energy gamma rays from a class of active galaxy similar to quasars and possibly powered by a black hole (Compton).
- Found three new gamma-ray quasars, detected more than 200 cosmic gamma ray bursts and captured the best ever observation of the glow of gamma radiation from the disk of the Milky Way galaxy (Compton).

Cosmology

- Detected the long-sought variations within the glow from the Big Bang -- the primordial explosion that began the universe 15 billion years ago. This detection is a major milestone in a 25-year search and supports theories explaining how the initial expansion happened (COBE).

The Year in Review

<ul style="list-style-type: none"> Determined more accurately the expansion rate of the universe. Detected 27 "cepheid variable" (used to estimate distances to galaxies) stars in a faint spiral galaxy called IC 4182 (HST). <p>Exploring the Solar System</p> <p>Mars Observer - Launched Sep 25 aboard a Titan III ELV to examine Mars much like Earth satellites now map our weather and resources. On Aug 23, 1993, the spacecraft will begin orbiting the planet Mars and will provide scientists with an orbital platform from which the entire Martian surface and atmosphere will be examined and mapped by the seven science instruments on board.</p> <p>High Resolution Microwave Survey (HERMES) - Initiated on Columbus day, 500 years after the explorer landed in America, the HERMES project began searching for signals transmitted by other civilizations. The search will be conducted in two modes -- a sky survey to sweep the celestial sphere for signals and a targeted search to look at nearby stars. NASA's Deep Space Network in Goldstone, CA, and the Arecibo Observatory in Puerto Rico will conduct most of the survey.</p> <p>Cassini - A comprehensive examination of the Cassini spacecraft and mission was successfully completed Dec. 11. Cassini is scheduled for launch in Oct. 1997 and arrive at Saturn in Jun 2004. Cassini will fly by Venus and twice by Earth and Jupiter before arriving at Saturn to begin a 4-year orbital tour of the ringed planet and its 18 moons. In addition to the 12 instruments aboard the orbiter, the Huygens probe, built by the European Space Agency, will penetrate the thick atmosphere of Titan (the largest of Saturn's moons) in Nov 2004.</p> <p>Ulysses - The Ulysses spacecraft received a gravity assist as it flew by Jupiter on Feb. 9 at 280,000 miles from the planet's center. Designed to study the sun's magnetic field and solar wind, Ulysses's gravity assist to gain the momentum needed to break out of the plane of the ecliptic and into a solar polar orbit. During the maraudous Jupiter fly-by, scientists investigated the interaction of the giant planet's magnetic field and the solar wind.</p> <p>Pioneer Venus - After the Pioneer Venus orbiter's maneuvering fuel ran out, it entered Venus' upper atmosphere on Oct 8. Pioneer Venus had been exploring the planet since 1978 and has returned numerous data about Venus' atmosphere and surface topography. The first topographic maps of the cloud-shrouded surface of the planet were made using the radar instruments on Pioneer Venus.</p>	
<p>Magellan - The Magellan spacecraft, mapping the surface of Venus with radar since Aug. 1990, lowered its altitude to Venus on Sep. 14 when it began a full 243-day cycle of gravity mapping. Magellan has completed three cycles of mapping with its radar, covering 98 percent of the surface of Venus. The objective of cycle 4, which extends to May 15, 1993, is to obtain a global map of the Venus gravity field from the elliptical orbit.</p> <p>Galileo - The Galileo spacecraft flew by the Earth on Dec. 8 at an altitude of 189 miles above the South Atlantic Ocean, completing a 3-year gravity-assist trajectory. This third gravity assist added about 8,300 miles per hour to the spacecraft's speed in its solar orbit and changed its direction slightly, to put it on an elliptical trajectory directly to the orbit of Jupiter. The spacecraft will arrive at Jupiter on Dec. 7, 1995. At Jupiter, Galileo will relay data from a probe that penetrates the planet's atmosphere to obtain direct measurements of that environment for the first time. The spacecraft will fly 10 different elliptical orbits of Jupiter, making at least two close passes by its four major satellites and carrying out extended observations of the planets' atmosphere and magnetosphere.</p> <p>Understanding the Earth-Sun Environment</p> <p>Saturn - The Solar Anode and Magnetospheric Particle Explorer, launched Jul. 2, is the first of a new series of Small Explorer missions to enable scientists to develop less costly astronomy and space science experiments in a shorter period of time. The spacecraft's peculiar elliptical orbit will spend the most time near Saturn, where instruments will use the Earth as a giant magnetic shield. By doing this, the four instruments can determine if particles are coming from the sun, from the Milky Way galaxy, or whether they are the anomalous cosmic rays. SAMP-X is expected to contribute new knowledge and improve understanding of the evolution of the sun, solar system and galaxies.</p> <p>Geotail - Launched Jul. 24, Geotail is investigating the interactions of the solar wind and the Earth's magnetosphere, providing scientists with new information on the flow of energy and its transformation in the region called the magnetotail. A joint U.S./Japanese project, Geotail is the first in a series of satellites in an international program to better understand the interaction of the sun, the Earth's magnetic field and the Van Allen radiation belts. The solar wind, interacting with the Earth's magnetic field, can cause disruptions in short-wave radio communications and power surges in long transmission lines.</p>	

The Year in Review

Living and Working in Space

Microgravity Science - Three Spacelab missions were flown to explore the effects of space on protein crystals, electronic materials, fluids, glasses and ceramics and metals and alloys. Missions flown aboard the Space Shuttle this year include the International Microgravity Laboratory, flown in January; United States Microgravity Laboratory-1, June, and United States Microgravity Platform-1, October. The September flight of Spacelab-J, the Japanese Spacelab, also included NASA-sponsored microgravity experiments. A total of 45 NASA-sponsored microgravity experiments flew on these missions. These flights represented more peer-reviewed, hands-on microgravity research than had been conducted by the United States since Skylab in 1974-75.

Life Sciences - The International Microgravity Laboratory-1 carried 28 life sciences experiments and Spacelab-J carried 7. The United States Microgravity Laboratory-1 (USML-1) mission, although dedicated to microgravity science, supported a series of medical investigations as part of the Extended Duration Orbiter Medical Project. The longest Space Shuttle mission to date, USML-1 proved to be an excellent laboratory for these investigations.

During the winter of 1992, life sciences experiments were conducted in Antarctica. NASA and the National Science Foundation sponsored several unique science and technology projects developed under a joint effort called the Antarctic Space Analog Program. NASA also is participating in a cooperative life sciences mission with Russia. Late in December, Russia will launch Cosmos '92 "biosatellite," a recoverable, unpowered spacecraft that carries plant and animal experiments.

Earth Systems - In March, the Atlas-1 mission used two Spacelab pallets to conduct investigations into the sun's energy output, the chemistry of the Earth's atmosphere, space plasma physics and astronomy. A core set of six instruments will fly repeatedly to study the interaction of the Sun and the Earth's atmosphere.

The Offices of Aeronautics and Space Technology and Space Sciences managed NASA's contribution to the national High-Speed Computing and Communications program. In October, 29 supercomputing proposals were selected to study problems ranging from the environment to the evolution of the universe. These projects will use "parallel processing" computers, using thousands of processors to work simultaneously on a problem.

In January, the NASA Science Internet (NSI) helped implement the world's first high-speed computer network link to Antarctica, providing voice and data links between the continental United States and the U.S. base at McMurdo Sound. In November, NSI staff set up the first video link between Antarctica and the United States to transmit images between the Ames Research Center and a remotely operated vehicle maneuvering under ice-covered lakes.

In January, the National Space Science Data Center's Data Archive and Dissemination System became operational. User interest in these electronically available astrophysics and space physics data sets has been high, with recent access rates running at 700 remote user sessions per month.

Understanding the Earth

Topex/Poseidon - The Topex/Poseidon, launched in August, will measure the sea surface height, providing scientists with global maps of ocean circulation. Coasters transport heat from the Earth's equator toward the poles and the data will provide a better understanding of how this mechanism works. Topex/Poseidon is a joint mission between NASA and CNES, the French space agency.

Labios II - A passive satellite, the Italian Labios II is covered with reflectors that send laser beams back to the ground stations that sent the beams. Measurements over the years and over various geographic areas show how the tectonic plates that make up the Earth's crust are moving. Since most earthquakes and volcanoes occur where these plates meet, Labios II will help geologists understand how these cataclysmic events occur and where they are likely to happen.

Earth Observing System - The Earth Observing System (EOS) continued to progress to the launch of its first satellite in June 1998. Internal teams reviewed the program with the goal of reducing funding requirements through FY 2000 by approximately 30 percent while retaining the essence of the instrument complement and science plan.

Ozone Research - NASA cooperated with NOAA and other organizations on the second Arctic Arctic Stratospheric Expedition (November 1991 - March 1992). The campaign discovered record-high levels of chlorine monoxide, a key chemical in the ozone depletion cycle, over Eastern Canada and New England. This finding was complemented by data from the Upper Atmosphere Research Satellite (UARS), which observed high concentrations of chlorine monoxide over Europe and Asia.

The Year in Review

<p>In the Atlantic, the Total Ozone Mapping Spectrometer, which has been observing global ozone levels for 14 years, indicated the 1992 ozone hole was 15 percent larger in area than any previously seen. Earlier, UARS had observed chemicals involved in ozone depletion in the Antarctic atmosphere as early as June, 3 months before significant ozone depletion begins.</p>	<p>January, STS-50 in June and STS-47 in September, carried the pressurized Spacelab module. Experiments conducted on those flights previewed the activities that will be undertaken on Space Station Freedom.</p>
<p>NASA's ozone research expanded with the first of a new series of Space Shuttle missions in April. The Atlas program missions study the sun's energy output and the atmosphere's chemical makeup, and how these factors affect ozone levels. Atlas instruments are precisely calibrated before and after flight, providing a check on data gathered by similar instruments on free-flying satellites.</p>	<p>The Shuttle system showed its versatility throughout the year. In March it served as an orbiting observatory for the STS-43/Atlas mission. The STS-46 mission in July demonstrated new technology in space with the Tethered Satellite System payload. On September 28 and the STS-52 crew in October showed the orbiter's ability to fly a combination mission as they deployed the Langley satellite and then conducted microgravity research with the United States Microgravity Payload. The year also saw the last dedicated Department of Defense mission flown by the Shuttle during the STS-53 flight in early December.</p>
<p>Search and Rescue: NASA was involved in a technology test that already has significant down-to-Earth dividends. A hand-held transmitter, used in conjunction with Search and Rescue equipment flying aboard NASA-developed weather satellites, allowed rescuers to locate an Alaska hunter immobilized by abdominal cramps on Alaska's largely untraveled North Slope.</p>	<p>Safety remained the Shuttle program's top priority. Space Shuttles Columbia and Discovery completed major structural inspections and modifications of Space Shuttle Atlantis, including work to shore it to deck with the Mir Space Station began in October. When Atlantis returns to flight status in 1993, all of NASA's orbiters will have incorporated modifications to the bracing system and wing struts.</p>
<p>Expendable Launch Vehicles</p> <p>Five expendable vehicles were launched this year. On Jun 7, a Delta 2 placed the Extreme Ultraviolet Explorer, an astrophysics satellite, into low-Earth orbit. On Jul 3, a Scout placed Ultraviolet Explorer, an astrophysics satellite, into low-Earth orbit. On Jul 3, a Scout placed the Japanese Geospatial class space Physics satellite, into low-Earth orbit. A Delta 2 earned the Japanese Geospatial satellite into space on Jul 24. On Sep 25, a Titan II lifted the Mars Observer into Earth orbit where the Transfer Orbit Stage (TOS) ignited, sending the spacecraft on to Mars. This was the maiden flight of the TOS. The final launch of the year was on Nov 21 when a Scout placed a Strategic Defense Initiative Orion payload into orbit.</p>	<p>During the year, a detailed budget review resulted in significant cost reductions. The total reduction for FY 1992 was \$368 million or 9 percent of the FY 1992 baseline budget. A budget reduction plan is in place that will result in over a billion dollars in cost savings in FY 1996, again, as compared to the FY 1992 baseline budget.</p>
<p>Office of Space Flight</p>	<p>A new class of 19 astronaut candidates was named in March. During the year astronauts Vance D. Burt, Bruce E. Melnick, John D. Creighton, Kathryn D. Sullivan, David C. Hilmers, James C. Adamson, James F. Buchli and Daniel M. Bunkersten left the agency.</p>
<p>Space Shuttle</p>	<p>Office of Space Systems Development</p>
<p>Highlighting the missions conducted was Endeavour's maiden voyage in May on the STS-49 mission. The crew rescued a wayward satellite and in the process set three new records for a space flight - 4 spacewalks on a single mission, the longest spacewalk ever conducted (8 hours, 29 minutes) and the first 3-person spacewalk ever performed. Three Shuttle missions, STS-42 in</p>	<p>Space Station Freedom</p> <p>Making ever-closer to the first element launch of Space Station Freedom, 1992 was the year of the critical design review (CDR). CDRs for each individual work package, leading to a design review</p>

The Year in Review

for the entire human-tended configuration, are on schedule to be completed by June 1983. Completion of the CDR marks the point at which the design is 80 percent completed and the contractor is given authority to proceed with development of the flight hardware.

At the Marshall Space Flight Center, Huntsville, AL, prime contractor Boeing Defense and Space Group began a series of hardware tests demonstrating how space station components will be joined in orbit. At the Johnson Space Center, Houston, TX, responsible for major space station systems, several milestones were achieved in the Work Package 2 program.

More than 400 pieces of development hardware now exist and 50 percent of prime contractor McDonnell Douglas' development test program is complete. In the Data Management System, DMS kits, an integrated set of electronic units, functionally equivalent to the station's data management system, were delivered to the Johnson Space Center, and to the Kennedy Space Center. Releases of DMS software were delivered to NASA on or ahead of schedule.

At the Lewis Research Center, Cleveland, OH, responsible for the system that supplies Freedom's electrical power, nearly one-half of the critical design reviews for the various components of the Photovoltaic Module and the Power Management and Distribution System were completed.

In the power management and distribution area, Work Package-4 engineers have completed the first three phases of system tests in the Solar Power Electronics Laboratory at prime contractor Rocketdyne's facility in Canoga Park, CA.

In October, Administrator Goldin announced changes to Space Station Freedom management that would ensure NASA's top talent is working on the program. Marly Kress, previously the Assistant Administrator for Legislative Affairs, was named Deputy Program Manager for Policy and Management. Tom Campbell was named Chief Financial Officer for Freedom. Campbell had been serving as the NASA Comptroller. In December, NASA announced plans to consolidate management of the Space Station Freedom program in Reston, VA.

The Space Shuttle continued to play a critical role in paving the way for space station assembly, utilization and operations. Four Space Shuttle missions carried Spacelab hardware, demonstrating human interaction in the conduct of science in space and bridging the gap between the first steps

taken in microgravity research in space started in Apollo to its full-blown maturity on Freedom. A number of space station precursor research facilities were flown on STS-50, the first United States Microgravity Laboratory, such as a glovebox and a crystal growth furnace. On STS-49, astronauts performed a space walk to evaluate construction techniques and the ability of astronauts to move large, heavy objects around in space.

The first major conference devoted to Freedom's capabilities and services to the user community was held in Huntsville, AL in August. Goldin, in his keynote address, called Freedom "NASA's 10th research facility as well as a national and international program." He challenged NASA to increase participation by the user community to 200-300 real researchers at the next conference.

In Congress, Freedom's future was debated in three separate measures over a 13-month period. In each case, Congress voted to maintain America's commitment to build the space station and preserve U.S. leadership in space. A final conference bill resulted in NASA's securing \$2.1 billion for space station in FY 1983, \$150 million less than the President's request.

ASRM

Congress determined that the Advanced Solid Rocket Motor (ASRM) program should proceed but at a reduced level of funding for FY 1983. Consequently, the program was restructured resulting in a 22-month delay for the first launch, not scheduled for December 1988. ASRM facilities design reached 100 percent and construction of facilities passed the 50 percent mark. Construction of case production facilities in Southern Indiana was completed; two of a total of four large ASRM segment transporters were delivered to NASA by the German contractor in December.

NLS

Congress voted to terminate the joint NASA/Air Force New Launch System (NLS) which was to have been a new family of vehicles designed to meet both civil and military launch requirements after the turn of the century. The Air Force was appropriated \$10 million to accomplish the termination; NASA was appropriated \$10 million for continuation of development work begun under NLS, for a new Space Transportation Main Engine.

The Year in Review

<p>Aeronautics</p> <p>NASA's aeronautics research took on a higher profile, with major advances in high-speed research, subsonic transports, high-performance aircraft and the creation of a separate Office of Aeronautics.</p> <p>NASA's Lewis Research Center, General Electric Co. and Pratt & Whitney teamed up in a unique government-industry partnership to develop advanced materials for a next-generation, U.S. supersonic transport. In July, construction began on a high-flying, lightweight, unpowered research aircraft, called Pegasus that NASA will use to measure ozone levels and gather other atmospheric data for the High-Speed Research Program.</p> <p>The highlight of NASA's subsonic research was a dramatic series of flights to evaluate airborne windshield sensors under actual severe weather conditions. NASA and the Army began a 5-year program to increase helicopter agility and maneuverability. A NASA F-15 based at Ames Dryden Flight Research Facility, Edwards, CA, started supersonic flight tests of a Performance Seeking Control System that may make future high-speed aircraft more fuel-efficient and reliable.</p> <p>Dryden also became home to less than the X-31 Enhanced Fighter Maneuverability aircraft. NASA is part of an international group flying the X-31 to show the value of coupling thrust vectoring (directing engine exhaust flow) with advanced flight control systems to increase maneuverability in nose-high forward flight.</p> <p>National Aero Space Plane (NASP)</p> <p>The nation got a preview of tomorrow's space transportation in June when a mockup of the NASP rolled out of its hangar at Mississippi State University, Starkville, MS. Senior engineering students at the school won the chance to build the mockup in a nationwide competition sponsored by NASA and the Department of Defense (DOD).</p> <p>NASP is a joint NASA/DOD effort to develop advanced technologies for future vehicles that could take off like an airplane, fly into Earth orbit using supersonic combustion engines (scramjets) and thermal rocket propulsion, then return through the atmosphere to land on a runway.</p>	<p>Space Technology</p> <p>NASA's research on space technology stressed new methods that robots and humans eventually may use to explore the moon and Mars. Experiments evaluated telepresence technology that lets a person, wearing a video headset, see remote locations through cameras mounted on a robot.</p> <p>Beginning in October, NASA scientists employed telepresence to direct the mid-size during explorations of ice-covered Lake Hoare on Antarctica's Ross Island. In June, NASA's Jet Propulsion Laboratory, Pasadena, CA, unveiled Rocky IV, the latest in a series of planetary micro-rovers. Around the same time, NASA-Langley engineers assembled a large-scale parabolic (double-curve) antenna in a huge water tank at NASA's Marshall Space Flight Center, Huntsville, AL, to simulate the microgravity environment that astronauts must work in while putting together large objects in space.</p> <p>Advanced Concepts and Technology</p> <p>In October, Goddard announced that the agency's space technology work would be combined with commercial space activities to improve the way in which NASA approaches the development and transfer of advanced technology, as well as the commercialization of space and space technologies.</p> <p>Commercial Flight Activities</p> <p>Throughout 1992, more than 20 commercial payloads flew aboard the Space Shuttle. Five commercial payloads, consisting of more than 30 investigations in materials, fluids and biological processes, were flown on the STS-502 week mission.</p> <p>In October, four commercial payloads, comprising more than 30 investigations, were flown aboard STS-52 to evaluate a compound being developed to treat osteoporosis; to further study protein crystal growth for drug research and development; to learn more about how microgravity can aid larger and more uniform mineral crystals; and to learn more about how microgravity can aid research in drug development and delivery; basic cell biology; protein and inorganic crystal growth; bone and keratinocyte development; immune deficiencies; manufacturing processes and fluid sciences.</p>
--	---

The Year in Review

Other commercial experiments were flown aboard the Space Shuttle to study the influence of microgravity on the processing of gelled sols, to investigate the physical and chemical processes that occur during the formation of polymer membranes in microgravity, to further investigate and develop the bases for materials processing in space, to study the effects of the low-Earth orbit environment on space structure materials, and to assess the utility of an Electronic Still Camera.

Technology Transfer

1982 marked the 30th anniversary of NASA's Technology Transfer Program, established under congressional mandate to promote the transfer of aerospace technology to other sectors of the U.S. economy.

In January, as part of a major initiative to upgrade its technology transfer program, NASA established six Regional Technology Transfer Centers (RTTC) to directly serve the commercial sector through the transfer and commercial use of NASA and other federal technologies. The RTTCs, closely aligned with state-level programs, operate as industry-driven catalysts for federal technology transfer throughout their regions.

The National Technology Transfer Center (NTTC), sponsored by NASA in cooperation with other federal agencies, initiated operations in conjunction with the RTTCs and other technology transfer programs. The RTTCs and NTTC, along with affiliated federal and state programs, now form the basis of the Innovative National Technology Transfer Network.

In February, the National Technology Initiative (NTI) was launched by NASA and the Departments of Commerce, Energy and Transportation to spur U.S. economic competitiveness by promoting a better understanding of the opportunities for industry to commercialize new technology advances.

The third national technology transfer conference and exposition, Technology 2000, took place Dec 1-3 at the Baltimore Convention Center, Baltimore, MD. Sponsored by NASA, "NASA Tech Briefs" magazine and the Technology Utilization Foundation, the conference featured exhibits from NASA's nine field centers, other government agencies, universities, government research centers and a diverse array of high-tech companies.

Communications and Remote Sensing

In July, NASA selected 30 experiments proposed for inclusion in the Advanced Communications Technology Satellite (ACTS) program. The experiments represent the work of an impressive cross section of industry and academic investigators. Ten experiments also were selected to conduct propagation research at Ka-band. During the year, the ACTS Experiment Program signed memoranda of understanding with three agencies:

- The National Telecommunications and Information Administration/institute for Telecommunications Sciences will test and evaluate the ACTS unique capabilities and technology to gain knowledge of advanced communication satellite system performance.
- The Defense Advanced Research Project Agency is developing a high data rate satellite research testbed network.
- The U.S. Army Space Command will use the ACTS to conduct demonstrations of technology and applications which involve interoperability between ACTS and the Army communications facilities.

Small Business Innovation Research

From December through March, the Small Business Innovation Research (SBIR) Division selected 138 research proposals for negotiation of Phase II contract awards in NASA's SBIR program. Included were 120 small, high technology firms located in 28 states. The selection of 348 research proposals for negotiation of Phase I contracts in the 1982 SBIR program was announced in November. Proposals selected were submitted by 256 small, high technology firms in 34 states.

Exploration

Early in the year the Office of Exploration conducted a workshop with the Lunar and Planetary Institute in Houston to define the scientific requirements for the first lunar, orbital precursor missions. Instruments to fly on these missions were selected based on recommendations and input from the workshop.

The Year in Review

In addition, Exploration program officials conducted an in-depth technical study of a First Lunar Outpost concept intended to be the baseline architecture to return humans to the Moon. The program is evaluating trade-offs and options for the baseline, which is expected to evolve and be modified before it is flown. Also initiated were conceptual studies of possible mission scenarios for human exploration of Mars.

International

Highlights of international space cooperation included increased cooperation with the Russian Space Agency, the launch of international spacecraft/ payloads, flight of foreign payload specialists and an ESA mission specialist on the Space Shuttle and the culmination of the Space Agency Forum on International Space Year activities. Other highlights of 1992 include:

- Scientists from NASA, the European Space Agency (ESA), the Canadian Space Agency (CSA), the French National Center for Space Studies (CNES), the German Space Agency (DFG) and the National Space Development Agency of Japan (NASDA) cooperated in the International Microgravity Laboratory-1 (IML-1) Space Shuttle ST-S-42 mission launched on Jan 22. More than 200 scientists from 15 countries participated in the investigations.
- President George Bush and Russian President Boris Yeltsin signed a U.S./Russian space agreement in June which expanded bilateral cooperation in space science, space exploration, space applications and the use of space technology.
- In July, NASA signed a contract with the Russian firm NPO Energia, focusing on possible use of the Russian Soyuz-TM vehicle as an interim assured crew return vehicle.
- Genaki, a Japanese built spacecraft, was launched on Jul 24. This joint U.S./Japanese project is the first in a series of five satellites with significant participation from NASA, ESA and Japan to better understand the interaction of the sun, the Earth's magnetic field and the Van Allen radiation belts.
- The Topex/Poseidon satellite was launched on an Ariane IV launch vehicle from the Guiana Space Center in Kourou, French Guiana on Aug 10. Topex/Poseidon is a joint NASA/CNES program to study ocean circulation and its role in regulating global climate.
- The July/August ST-S-46 Space Shuttle mission included the flight of the NASA/Italian Space Agency (ASI) Enhanced Satellite System and deployment of the European Transferable Carrier platform.

- The 50th Space Shuttle (ST-S-47) mission launched in September was a joint U.S./Japanese Shuttle mission. 34 Japanese experiments, collectively called Forward 302, were flown on a remountable test and stowage (SST) module with 7 U.S. and 2 payload experts.
- In October, NASA and the Russian Space Agency signed an agreement for the Russian Mir Russian cosmonaut on the U.S. Space Shuttle, the flight of a U.S. astronaut on the Russian Mir Space Station and a joint mission including the rendezvous and docking of the Space Shuttle with the Mir Space Station.
- The ST-S-32 mission in October included the ASI's Laser Geodynamics Satellite (LAGEOS II) launched on an Italian INS upper stage, CSA's Canad 2 payload and the CNES/French Atomic Energy Commission's Impasto instrument on the U.S. Microgravity Payload.

Space Communications

The on-orbit Tracking and Data Relay Satellite System (TDRSS) provided continuous communications coverage to NASA's Space Shuttle orbiter for up to 85 percent of each orbit, performing at a proficiency in excess of 99.8 percent. A 33 percent increase in Space Shuttle flights, the addition of the Ebersole User-Rescue Endeavor (EURE) and Ocean Topography Experiment satellites, and continued heavy support for the Conquest Gamma Ray Observatory and Hubble Space Telescope continue to be TDSS's added workload. In addition, commercial use of the TDSS Cedar II resource started, via a lease of those capabilities, to a small business private sector firm. Space becoming operational in late 1983, TDSS has relayed a 3.5 million minutes of data to the ground, and its resources have been required by every subsequent Space Shuttle mission.

The TDSS Contribution Program moved closer to the completion of the ground terminal modifications required to maintain Space Network user services and meet the evolving needs for satellite tracking and communications through the first decade of the 21st Century. Construction of the Second TDSS Ground Terminal at the White Sands Complex, NM, was completed and hardware/software integration testing is underway.

Ground Data Systems

The data processing program received and processed over 8 billion bits of scientific data containing

The Year in Review

space acquired images and measurements from both free-flyer and Earth-orbiting spacecraft and Shuttle payloads. The captured data was converted to form the science community could interpret and distributed to world-wide science facilities. With the advent of EUMS and Smapex data, a new all-time record of 1 million bits of data a month was processed.

Safety and Mission Quality

Frederick D. Gregory, NASA Astronaut and Colonel, USAF, was named to the position of Associate Administrator. Gregory is responsible for the safety and mission quality for all NASA programs and activities and for the direction of reporting and documentation of problem identification, problem resolution and trend analysis.

The Office of Safety and Mission Quality (SMO) made significant contributions to the successful operation of this year's Space Shuttle and expendable launch vehicle missions. SMO provided independent safety oversight, technical assessments, safety assurance engineering, policy development, risk assessment and mishap investigations.

A NASA Mechanical Parts Control Program Implementation Plan was initiated to assure the integrity of NASA spaceflight hardware components critical to protect human lives and programs. A Safety, Reliability and Quality Assurance Working Group was established to assure that both NASA's and the USSR's space plans for joint missions and operations will meet all safety, reliability and quality assurance needs.

Over 2,500 safety professionals, program personnel, and managers throughout NASA were trained at the newly implemented NASA Safety Training Center.

Education

During the International Space Year (ISY) kick-off celebration, NASA and the Young Astronaut Council announced an ISY student space art contest, called Outer Sight. Over 1,800 school children in grades K-9 entered the competition to capture ISY's spirit of world-wide celebration of space cooperation and discovery by expressing their vision of future space exploration and discovery.

July 22 marked a major milestone for aerospace education by expanding the National Space Grant College and Fellowship Program to include all 50 states, the District of Columbia and Puerto Rico. The addition of Kentucky, Nebraska, Puerto Rico, Vermont and Wyoming, with their 26 colleges and universities, brings the total number of participating institutions to more than 320 nationwide.

The first student managed and built payload flew on a NASA sounding rocket was launched on Sep 21 from the Wallops Flight Facility, Wallops Island, VA. Coinciding with the historic first flight of an African American female astronaut in September, NASA Administrator Goldin, Congressman Louis Stokes (D-OH), and NAACP Chairman Dr. William Gibson participated in a symposium to expand education and career opportunities for minorities in science, engineering and technology.

During STS-51, the crew of Space Shuttle Columbia talked with the sea-voyaging crew of the historic Hawaiian canoe Hououlika on Oct 28. At the same time, students throughout Hawaii, plotting the course of the canoe's historic voyage, watched the televised conversation.

Tens of thousands of students in more than 20 nations interacted with scientists, engineers and astronauts to learn about activities in Space exploration and Mission to Planet Earth through a series of satellite-linked videoconferences. NASA conducted the first of two live, interactive satellite videoconferences. The first broadcast on Oct 21 featured Space Exploration.

FY 1983 NASA Appropriations

Under the constraints facing all domestic discretionary programs in 1982, congressional action on NASA's FY 1983 budget request produced a budget for the civil space program lower than FY 1982, marking the first decrease in NASA appropriations (not counting inflation) since 1971. However, given earlier indications that congressional budget cuts in NASA programs would be much deeper, possible including the deletion of funding for Space Shuttle Freedom, the final congressional outcome for FY 1983 was significantly better than expected.

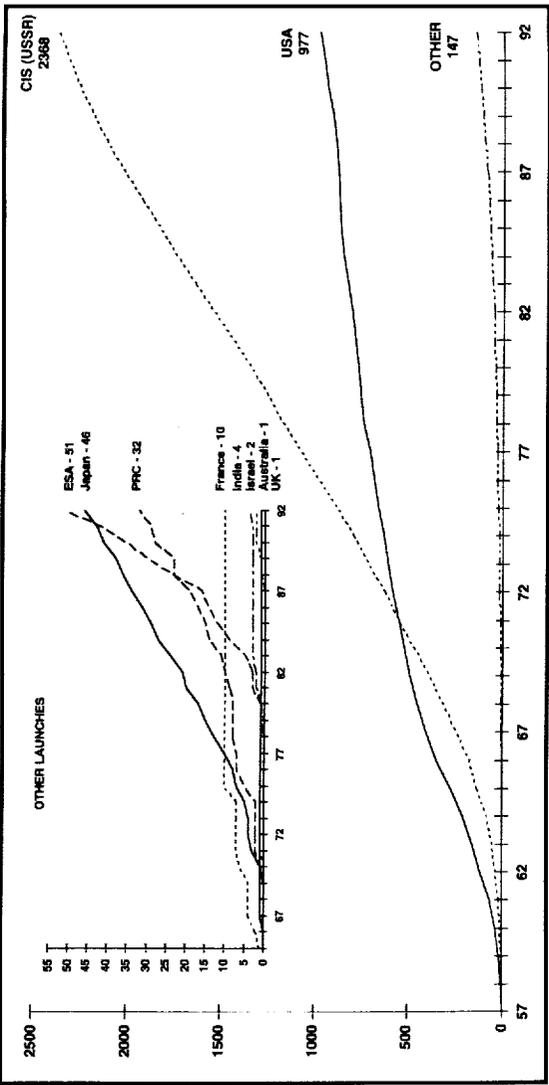

The FY 1983 VA-HUD-Independent Agencies Appropriations Bill cleared Congress on Sep 25 and was signed by President Bush on Oct 5. NASA's funding was set at \$14,330 million, \$663 million less than the President's FY 1983 request and a \$4 million decrease from FY 1982.

Shuttle Approach and Landing Tests

Flight	Flight Date	Weight (kg)	Description of Flight
Captive Inert Flight 1	Feb 18, 1977	64,717.0	Unmanned inert Orbiter (Enterprise) mated to Shuttle Carrier Aircraft (SCA) to evaluate low speed performance and handling qualities of Orbiter/SCA combination. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurry, Vic Horton, and Skip Gудdy. Flight Time: 2 hours 10 minutes.
Captive Inert Flight 2	Feb 22, 1977	64,717.0	Unmanned inert Orbiter (Enterprise) mated to SCA to demonstrate flutter free envelope. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurry, Vic Horton, and Skip Gудdy. Flight Time: 3 hours 15 minutes.
Captive Inert Flight 3	Feb 25, 1977	64,717.0	Unmanned inert Orbiter (Enterprise) mated to SCA to complete flutter and stability testing. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurry, Vic Horton, and Skip Gудdy. Flight Time: 2 hours 30 minutes.
Captive Inert Flight 4	Feb 28, 1977	64,717.0	Unmanned inert Orbiter (Enterprise) mated to SCA to evaluate configuration variables. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurry, Vic Horton, and Skip Gудdy. Flight Time: 2 hours 11 minutes.
Captive Inert Flight 5	Mar 2, 1977	65,142.0	Unmanned inert Orbiter (Enterprise) mated to SCA to evaluate maneuver performance and procedures. SCA Crew: Fitzhugh L. Fulton, Jr., A. J. Roy, Vic Horton, and Skip Gудdy. Flight Time: 1 hour 40 minutes.
Captive Active Flight 1A	Jun 18, 1977	68,462.3	First manned captive active flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned active Orbiter (Enterprise) mated to SCA for initial performance checks of Orbiter Flight Control System. SCA Crew: Fitzhugh L. Fulton, Jr., Thomas C. McMurry, Vic Horton, and Skip Gудdy. Flight Time: 56 minutes.
Captive Active Flight 1	Jun 28, 1977	68,462.3	Manned captive active flight with Joe H. Engle and Richard H. Truly. Manned active Orbiter (Enterprise) mated to SCA to verify conditions in preparation for free flight. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurry. Flight Time: 1 hour 3 minutes.
Captive Active Flight 3	Jul 26, 1977	68,462.3	Manned captive active flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned active Orbiter (Enterprise) mated to SCA to verify conditions in preparation for free flight. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurry. Flight Time: 59 minutes.
Free Flight 1	Aug 12, 1977	66,039.6	First manned free flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned Orbiter (Enterprise) with talloone on, released from SCA to verify handling qualities of Orbiter. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurry. Flight Time: 53 minutes 51 seconds.
Free Flight 2	Sep 13, 1977	66,039.6	Manned free flight with Joe H. Engle and Richard H. Truly. Manned Orbiter (Enterprise) released from SCA to verify characteristics of Orbiter. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurry. Flight Time: 54 minutes 55 seconds.
Free Flight 3	Sep 23, 1977	66,402.4	Manned free flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned Orbiter (Enterprise) released from SCA to evaluate Orbiter handling characteristics. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurry. Flight Time: 51 minutes 12 seconds.
Free Flight 4	Oct 12, 1977	66,817.5	Manned free flight with Joe H. Engle and Richard H. Truly. Manned Orbiter (Enterprise) with talloone off and three simulated engine bells installed, released from SCA to evaluate Orbiter handling characteristics. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurry. Flight Time: 1 hour 7 minutes 48 seconds.
Free Flight 5	Oct 26, 1977	66,825.2	Manned free flight with Fred W. Haise, Jr. and C. Gordon Fullerton, Jr. Manned Orbiter (Enterprise) with talloone off, released from SCA to evaluate performance of landing gear on paved runway. SCA Crew: Fitzhugh L. Fulton, Jr. and Thomas C. McMurry. Flight Time: 54 minutes 42 seconds.

CIS (USSR) Spacecraft Designations

The Union of Soviet Socialist Republics (USSR) became the Confederation of Independent States (CIS) on December 25, 1991.

<p>ALMAZ: Study geology, cartography, oceanography, ecology, and agriculture.</p> <p>BURAN (Snowstorm): Reusable orbital space shuttle.</p> <p>COSMOS: Designation given to many different activities in space.</p> <p>EKRAN (Screen): Geosynchronous comsat for TV services.</p> <p>ELEKTION: Dual satellites to study the radiation belts.</p> <p>FOTON: Scientific satellite to continue space materials studies.</p> <p>GAMMA: Radiation detection satellite.</p> <p>GORizont (Horizon): Geosynchronous comsat for international relay.</p> <p>GRANAT: Astrophysical orbital observatory.</p> <p>INFORMATOR: Collect and transmit information for the Ministry of Geology.</p> <p>INTERCOSMOS: International scientific satellite.</p> <p>ISRA: Amateur radio satellite.</p> <p>KRISTALL: Module carrying technical and biomedical instruments to MIR.</p> <p>KVANT: MIR space station astrophysics module.</p> <p>LUNA: Lunar exploration spacecraft.</p> <p>MARS: Spacecraft to explore the planet Mars.</p> <p>METEOR: Polar orbiting meteorological satellite.</p> <p>MIR (Peace): Advanced manned scientific space station in Earth orbit.</p> <p>MOLNIYA (Lightning): Part of the domestic communications satellite system.</p> <p>NADEZHDA: Navigation satellite.</p>	<p>OKEAN: Oceanographic satellite to monitor ice conditions.</p> <p>PHOBOS: International project to study Mars and its moon Phobos.</p> <p>PION: Scientific satellite for research of the upper atmosphere.</p> <p>POLYOT: Maneuverable satellite capable of changing orbits.</p> <p>PROGNOZ (Forecast): Scientific interplanetary satellite.</p> <p>PROGRESS: Unmanned cargo flight to resupply manned space stations.</p> <p>PROTON: Scientific satellite to investigate the nature of Cosmic Rays.</p> <p>RADIO: Small radio relay satellite for use by amateurs.</p> <p>RADUGA (Rainbow): Geosynchronous comsat for telephone, telegraph, and domestic TV.</p> <p>RESURS: Earth resources satellite.</p> <p>SALYUT: Manned scientific space station in Earth orbit.</p> <p>SOYUZ (Union): Manned spacecraft for flight in Earth orbit.</p> <p>SPUTNIK: Early series of satellites to develop manned spaceflight.</p> <p>VEGA: Two spacecraft international project to develop manned spaceflight.</p> <p>VENERA: Spacecraft to explore the planet Venus.</p> <p>VOSKHOD: Modified Vostok capsule for two and three Cosmonauts.</p> <p>VOSTOK (East): First manned capsule; placed six Cosmonauts in orbit.</p> <p>ZOND: Automatic spacecraft development tests; Zond 5 was the first spacecraft to make a circumlunar flight and return safely to Earth.</p>

Payloads and Experiments			
<p>Deployable Payloads: None</p> <p>Attached PLB Payloads: ATLAS-1 (2 Spacelab Pallet and Igloo) - Objective: Study the composition of the middle atmosphere and its variations over an 11 year solar cycle. This is the first of 10 planned ATLAS missions over the next 11 years.</p> <p>Atmosphere Physics: 1. Atmosphere Trace Molecule Spectroscopy (ATMCS) - Previously flown on Spacelab 1. Reflight from Spacelab 3 2. Millimeter Wave Atmospheric Sounder (MAS) - First flight 3. Atmospheric Lyman Alpha Emissions (ALAE) - Previously flown on Spacelab 1 4. Grille Spectrometer (GRILLE) - Previously flown on Spacelab 1 5. Imaging Spectrometric Observatory (ISO) - Previously flown on Spacelab 1</p> <p>Solar Science: 1. Active Cavity Radiometer Irradiance Monitor (ACRIM) - ACRIM 1 flow on the solar maximum satellite 2. Measurement of the Solar Constant (SOLCON) - Previously flown on Spacelab 1 3. Solar Spectrum Measurement from 180 to 3200 Nanometers (SOLSPEC) - Previously flown on Spacelab 1 4. Solar Ultraviolet Spectral Irradiance Monitor (SUSIM) - Previously flown on Spacelab 2 and on the Upper Atmosphere Research Satellite (UARS)</p> <p>Space Plasma Physics: 1. Atmospheric Emissions Photometric Imaging (AEPI) - Previously flown on Spacelab 1 2. Space Experiments with Particle Accelerators (SEPAAC) - Previously flown on Spacelab 1 3. Energetic Neutral Atom Precipitation</p>			
<p>Ultraviolet Astronomy: 1. Far Ultraviolet Space Telescope (FAUST) - Previously flown on Spacelab 1 2. Shuttle Solar Backscatter Ultraviolet (SSBU/SA) - Objective: To provide more accurate and reliable readings of global ozone to aid in the calibration of backscatter ultraviolet instruments being flown on free-flying satellites.</p> <p>GAS (Gateway Special): 1. Gateway Special 229 (GAS-229) - Objective: To melt and regrow gallium arsenide crystals with convective effects absent</p> <p>Crew Compartment Payload: 1. Investigation into Polymer Membranes Processing (PMP) - Objective: To flash evaporate mixed solvent systems in the absence of convection to control the porosity of the polymer membrane in microgravity 2. Space Tissue Loss-01 (STL-01) - Objective: To monitor the activities of tissue samples at the cellular level under the influence of microgravity 3. Radiation Monitoring Equipment-III (RME-III) - Objective: To measure ionizing radiation over repeated time intervals and digitally store the resulting data 4. Visual Function Tester-2 (VFT-2) - Objective: To measure basic vision performance parameters in an orbital space flight environment 5. Cloud Logic to Optimize Use of Defense System - Objective: To obtain photographic sequences of cloud fields of interest as targets of opportunity 6. Shuttle Amateur Radio Experiment (SAREX II) - Objective: To demonstrate voice, slow-scan television (SSTV), and pocket radio. All transmitted on 2 meter capabilities and fast scan television (FSTV) transmitted on 70 cm capability</p>

The Solar System

Our automated spacecraft have traveled to the Moon and to all the planets beyond our world except Pluto; they have observed moons as large as small planets, flown by comets, and sampled the solar environment. The knowledge gained from our journeys through the solar system has redefined traditional Earth sciences like geology and meteorology and spawned an entirely new discipline called comparative planetology. By studying the geology of planets, moons, asteroids, and comets, and comparing differences and similarities, we are learning more about the origin and history of these bodies and the solar system as a whole. We are also gaining insight into Earth's complex weather systems. By seeing how weather is shaped on other worlds and by investigating the Sun's activity and its influence through the solar system, we can better understand climatic conditions and processes on Earth.

The Sun

Many spacecraft have explored the Sun's environment, but none have gotten any closer to its surface than approximately two-thirds of the distance from Earth to the Sun. Pioneers 5-11, the Pioneer Venus, Voyager 1 and 2, and other spacecraft have all sampled the solar environment. The Ulysses spacecraft, launched Oct. 6, 1990, is a joint solar mission of NASA and the European Space Agency. After Jupiter's gravity to change its trajectory, Ulysses will fly over the Sun's polar regions during 1994 and 1995 and will perform a wide range of studies using nine onboard scientific instruments.

The Sun dwarfs the other bodies in the solar system, representing approximately 99.86 percent of all the mass in the solar system. All of the planets, moons, asteroids, comets, dust, and gas add up to only about 0.14 percent. This 0.14 percent represents the material left over from the Sun's formation. One hundred and nine Earths would be required to fit across the Sun's disk, and its interior could hold over 1.3 million Earths.

As a star, the Sun generates energy by the process of fusion. The temperature at the Sun's core is 15 million degrees Celsius (27 million degrees Fahrenheit), and the pressure there is 340 billion times Earth's air pressure at sea level. The Sun's surface temperature of 4,500 degrees Celsius (10,000 degrees Fahrenheit) seems almost chilly compared to its core temperature. At the solar core, hydrogen can fuse into helium, producing energy. The Sun produces a strong magnetic field and streams of charged particles, extending far beyond the planets.

The Sun appears to have been active for 4.6 billion years and has enough fuel for another 5 billion years or so. At the end of its life, the Sun will start to fuse helium into heavier elements and begin to swell up, ultimately growing so large that it will swallow Earth. After a billion years as a "red giant", it will suddenly collapse into a "white dwarf" -- the final end product of a star like ours. It may take a trillion years to cool off completely.

Mercury

Obtaining the first close-up views of Mercury was the primary objective of the Mariner 10 spacecraft, launched Nov. 3, 1973. After a journey of nearly 5 months, including a flyby of Venus, the spacecraft passed within 703 km (437 mi) of the solar system's innermost planet on Mar. 29, 1974. Until Mariner 10, little was known about Mercury. Even the best telescopic views from Earth showed Mercury as an indistinct object lacking any surface detail. The planet is so close to the Sun that it is usually lost in solar glare. When the planet is visible on Earth's horizon just after sunset or before dawn, it is obscured by the haze and dust in our atmosphere. Only radar telescopes gave any hint of Mercury's surface conditions prior to the voyage of Mariner 10.

Mariner 10 photographs revealed an ancient, heavily cratered surface, closely resembling our Moon. The pictures also showed high cliffs crisscrossing the planet, apparently created when Mercury's interior cooled and shrank, buckling the planet's crust. The cliffs are as high as 3 km (2 mi) and as long as 500 km (310 mi).

Instruments on Mariner 10 discovered that Mercury has a weak magnetic field and a trace of atmosphere -- a trillionth the density of Earth's atmosphere and composed chiefly of argon, neon, and helium. When the planet's orbit takes it closest to the Sun, surface temperatures range from 467 degrees Celsius (872 degrees Fahrenheit) on Mercury's sunlit side to -183 degrees Celsius (-288 degrees Fahrenheit) on the dark side. This range in surface temperature is the largest for a single body in the solar system. Mercury literally bakes and freezes at the same time.

Days and nights are long on Mercury. The combination of a slow rotation relative to the stars (89 Earth days) and a rapid revolution around the Sun (88 Earth days) means that one Mercury solar day (about 176 Earth days or two Mercury years, the time it takes Mercury to complete two orbits around the Sun).

The Solar System

<p>Mercury appears to have a crust of light silicate rock like that of Earth. Scientists believe Mercury has a heavy iron-rich core making up slightly less than half of its volume. That would make Mercury's core larger, proportionally, than the Moon's core or those of any of the planets.</p> <p>After the initial Mercury encounter, Mariner 10 made two additional flybys -- on Sep 21, 1974, and Mar. 16, 1975 -- before control gas used to orient the spacecraft was exhausted and the mission was concluded. Each flyby took place at the same local Mercury time when the identical half of the planet was illuminated, as a result, we still have not seen one-half of the planet's surface.</p> <p>Venus</p>	<p>Veiled by dense cloud cover, Venus -- our nearest planetary neighbor -- was the first planet to be explored. The Mariner 2 spacecraft, launched Aug. 27, 1962, was the first of more than a dozen successful American and Soviet missions to study the mysterious planet. On December 14, 1962, Mariner 2 passed within 34,839 kilometers (21,646 miles) of Venus and became the first spacecraft to scan another planet; onboard instruments measured Venus for 42 minutes. Mariner 5, launched in June 1967, flew much closer to the planet. Passing within 4,094 kilometers (2,544 miles) of Venus on the second American flyby, Mariner 5's instruments measured the planet's magnetic field, ionosphere, radiation belts, and temperatures. On its way to Mercury, Mariner 10 flew by Venus and transmitted ultraviolet pictures to Earth showing cloud circulation patterns in the Venusian atmosphere.</p> <p>On Dec. 4, 1978, the Pioneer Venus Orbiter became the first spacecraft to orbit the planet. Five days later, the five separate components making up a second spacecraft, the Pioneer Venus Multiprobe, entered the Venusian atmosphere at different locations above the planet. The four small probes and the main body reduced atmospheric data back to Earth during their descent toward the surface. Although designed to examine the atmosphere, one of the probes survived its impact with the surface and continued to transmit data for another hour.</p> <p>Venus resembles Earth in size, physical composition, and density more closely than any other known planet. However, significant differences have been discovered. For example, Venus' rotation (west to east) is retrograde (backward) compared to the east-to-west spin of Earth and most of the other planets.</p>
<p>Approximately 96.5 percent of Venus' atmosphere (95 times as dense as Earth's) is carbon dioxide. The principal constituent of Earth's atmosphere is nitrogen. Venus' atmosphere acts like a greenhouse, permitting solar radiation to reach the surface but trapping the heat that would ordinarily be radiated back into space. As a result, the planet's average surface temperature is 482 degrees Celsius (900 degrees Fahrenheit), hot enough to melt lead.</p> <p>A radio altimeter on the Pioneer Venus Orbiter provided the first means of seeing through the planet's dense cloud cover and determining surface features over almost the entire planet. VASs's Magellan spacecraft, launched on May 5, 1989, has orbited Venus since August 10, 1990. The spacecraft uses radar-mapping techniques to provide ultra-high-resolution images of the surface.</p> <p>Magellan has revealed a landscape dominated by volcanic features, faults, and impact craters. High areas of the surface show evidence of multiple periods of lava flooding with flows lying on top of previous ones. The Solar System

Earth

As viewed from space, Earth's distinguishing characteristics are its blue waters, brown and green land masses, and white clouds. We are enveloped by an ocean of air consisting of 78 percent nitrogen, 21 percent oxygen, and 1 percent other constituents. The only planet in the solar system known to harbor life, Earth orbits the Sun at an average distance of 150 million km (93 million mi). Earth is the third planet from the Sun and the fifth largest in the solar system, with a diameter a few hundred kilometers larger than that of Venus.

Our planet's rapid spin and molten nickel-iron core give rise to an extensive magnetic field, which, along with the atmosphere, shields us from nearly all of the harmful radiation coming from the Sun and other stars. Earth's atmosphere protects us from meteors as well, most of which burn up before they can strike the surface. Active geological processes have left no evidence of the peeling Earth almost certainly received soon after it formed -- about 4.6 billion years ago.

From our journeys into space, we have learned much about our home planet. The first American satellite -- Explorer 1 -- launched Jan 31, 1958, discovered an intense radiation zone, called the Van Allen radiation belts, surrounding Earth. Other research satellites revealed that our planet's magnetic field is distorted into a tear-drop shape by the solar wind. We've learned that the magnetic field does not fade off into space but has definite boundaries. And we now know that our wispy upper atmosphere, once believed calm and uneventful, seethes with activity -- swelling by day and contracting by night. Affected by changes in solar activity, the upper atmosphere contributes to weather and climate on Earth.

Besides affecting Earth's weather, solar activity gives rise to a dramatic visual phenomenon in our atmosphere. When charged particles from the solar wind become trapped in Earth's magnetic field, they collide with air molecules above our planet's magnetic poles. These air molecules then begin to glow and are known as the auroras or the northern and southern lights.

Satellites about 35,786 km (22,236 mi) out in space play a major role in daily local weather forecasting. These watchful electronic eyes warn us of dangerous storms. Continuous global monitoring provides a vast amount of useful data and contributes to a better understanding of Earth's complex weather systems.

From their unique vantage points, satellites can survey Earth's oceans, land use and resources, and monitor the planet's health. These eyes in space have saved countless lives, provided tremendous conveniences, and shown us that we may be altering our planet in dangerous ways.

The Moon

The Moon is Earth's single natural satellite. The first human footsteps on an alien world were made by American astronauts on the dusty surface of our airless, lifeless companion. In preparation for the Apollo expeditions, NASA dispatched the automated Ranger, Surveyor, and Lunar Orbiter spacecraft to study the Moon between 1964 and 1968.

NASA's Apollo program left a large legacy of lunar materials and data. Six 2-astronaut crews landed on and explored the lunar surface between 1969 and 1972, carrying back a collection of rocks and soil weighing a total of 382 km (942 lb) and consisting of more than 2,000 separate samples. From this material and other studies, scientists have constructed a history of the Moon that includes its infancy.

Rocks collected from the lunar highlands date to about 4.0-4.3 billion years old. The first few million years of the Moon's existence were so violent that few traces of this period remain. As a molten outer layer gradually cooled and solidified into different kinds of rock, the Moon was bombarded by large rocks and smaller objects. Some of the asteroids were as large as Rhode Island or Delaware, and their collisions with the Moon created basins hundreds of kilometers across.

This catastrophic bombardment tapered off approximately 4 billion years ago, leaving the lunar highlands covered with huge, overlapping craters and a deep layer of shattered and broken rock. Heat produced by the decay of radioisotopes began to melt the interior at depths of about 200 km (125 mi) below the surface. For the next 700 million years, lava rose from inside the Moon and gradually spread out over the surface, flooding the large impact basins to form the dark areas that Galileo Galilei, an astronomer of the Italian Renaissance, called "maria," meaning seas. As far as we can tell, there has been no significant volcanic activity on the Moon for more than 3 billion years. Since then, the lunar surface has been altered only by micrometeorites, atomic particles from the Sun and stars, rare impacts of large meteorites, and spacecraft and astronauts.

The Solar System

The origin of the Moon is still a mystery. Four theories attempt an explanation. The Moon formed near Earth as a separate body; it was torn from Earth; it formed somewhere else and was captured by our planet's gravity; or it was the result of a collision between Earth and an asteroid about the size of Mars. The last theory has some good support but is far from certain.

Mars

Mars has long been considered the solar system's prime candidate for harboring extraterrestrial life. Astronomers studying the red planet through telescopes saw what appeared to be straight-line criss-crossing its surface. These observations, later determined to be optical illusions, led to the popular notion that intelligent beings had constructed a system of irrigation canals. Another reason for scientists to expect life on Mars was the apparent seasonal color changes on the planet's surface. This phenomenon led to speculation that conditions might support vegetation during the warmer months and cause plant life to become dormant during colder periods.

Six American missions to Mars have been carried out. Four Mariner spacecraft, three flying by the planet and one placed into Martian orbit, surveyed the planet extensively before the Viking Orbiters and Landers arrived. Mariner 4, launched in late 1964, flew past Mars on July 14, 1965, within 9,846 km (6,118 mi) of the surface. Transmitting to Earth 22 close-up pictures of the planet, the spacecraft found many craters and naturally occurring channels but no evidence of artificial canals or flowing water. The Mariners 6 and 7 flybys, during the summer of 1969, returned 207 pictures. Mariners 4, 6, and 7 showed a diversity of surface conditions as well as a thin, cold, dry atmosphere of carbon dioxide.

On May 30, 1971, the Mariner 9 Orbiter was launched to make a year-long study of the Martian surface. The spacecraft aimed 5-1/2 months after liftoff, only to find Mars in the midst of a planet-wide dust storm that made surface photography impossible for several weeks. After the storm cleared, Mariner 9 began returning the first of 7,329 pictures that revealed previously unknown Martian features, including evidence that large amounts of water once flowed across the surface, etching river valleys and flood plains.

In Aug and Sep 1975, the Viking 1 and 2 spacecraft, each consisting of an orbiter and a lander, were launched. The mission was designed to answer several questions about the red planet,

including, is there life there? Nobody expected the spacecraft to spot Martian cities, but it was hoped that the biology experiments would at least find evidence of primitive life, past or present.

Viking Lander 1 became the first spacecraft to successfully touch down on another planet when it landed on Jul 20, 1976. Photographs sent back from Chryse Planitia ("Plains of Gold") showed a bleak, rusty-red landscape. Panoramic images revealed a rolling plain, littered with rocks and marked by rippled sand dunes. Fine red dust from the Martian soil gives the sky a salmon hue. When Viking Lander 2 touched down on Utopia Planitia on Sep 3, 1976, it viewed a more rolling landscape, one without visible dunes.

The results sent back by the laboratory on each Viking Lander were inconclusive. Small samples of the red Martian soil were tested in three different experiments designed to detect biological processes. While some of the test results seemed to indicate biological activity, later analysis confirmed that this activity was inorganic in nature and related to the planet's soil chemistry. Is there life on Mars? No one knows for sure, but the Viking mission found no evidence that organic molecules exist there.

The Viking Landers became weather stations, recording wind velocity and direction as well as atmospheric temperature and pressure. Few weather changes were observed. The highest temperature recorded by either spacecraft was -14 degrees Celsius (7 degrees Fahrenheit) at the Viking Lander 1 site in midsummer. The lowest temperature, -120 degrees Celsius (-184 degrees Fahrenheit), was recorded at the more northerly Viking Lander 2 site during winter. Near-hurricane wind speeds were measured at the two Martian weather stations during global dust storms, but because the atmosphere is so thin, wind force is minimal. Viking Lander 2 photographed light patches of frost, probably water-ice, during its second winter on the planet.

The Martian atmosphere, like that of Venus, is primarily carbon dioxide. Nitrogen and oxygen are present only in small percentages. Martian air contains only about 1/1,000 as much water as our air, but this small amount can condense out, forming clouds that ride high in the atmosphere or swirl around the slopes of towering volcanoes. Patches of early morning fog can form in valleys. There is evidence that in the past a denser Martian atmosphere may have allowed water to flow on the planet. Physical features closely resembling shorelines, gorges, meanders, and islands suggest that great rivers once marked the planet.

The Solar System

Mars has two moons, Phobos and Deimos. They are small and irregularly shaped and possess ancient, cratered surfaces. It is possible the moons were originally asteroids that ventured too close to Mars and were captured by its gravity.

The Viking Orbiters and Landers exceeded their design lifetimes of 120 and 90 days, respectively. The first to fail was Viking Orbiter 2, which stopped operating on July 12, 1976, when a leak depleted its attitude-control gas. Viking Lander 2 operated until April 12, 1980, when it was shut down due to battery depletion. Viking Orbiter 1 quit on Aug. 7, 1980, when the last of its attitude-control gas was used up. Viking Lander 1 ceased functioning on Nov. 13, 1983. Despite the inconclusive results of the Viking biology experiments, we know more about Mars than any other planet except Earth.

Asteroids

The solar system has a large number of rocky and metallic objects in orbit around the Sun but are too small to be considered full-fledged planets. These objects are known as asteroids or minor planets. Most, but not all, are found in a band or belt between the orbits of Mars and Jupiter. Some have orbits that cross Earth's path, and there is evidence that Earth has been hit by asteroids in the past. One of the best studied, best preserved examples is the Barringer Meteor Crater near Winslow, AZ.

Asteroids are material left over from the formation of the solar system. One theory suggests that they are the remains of a planet that was destroyed in a massive collision long ago. More likely, asteroids are material that never coalesced into a planet. In fact, if the estimated total mass of all asteroids was gathered into a single object, the object would be about 1,500 km (932 mi) across, less than half the diameter of our Moon. Thousands of asteroids have been identified from Earth and 100,000 may be bright enough to be photographed through Earth-based telescopes.

Much of our understanding about asteroids comes from examining pieces of space debris that fall to the surface of Earth. Asteroids that are on a collision course with Earth are called meteoroids. When a meteoroid strikes our atmosphere at high velocity, friction causes the chunk of space matter to incandesce in a streak of light known as a meteor. If the meteoroid does not burn up completely, what's left strikes Earth's surface and is called a meteorite. One of the best places to look for meteorites is the ice cap of Antarctica.

Of all the meteorites examined, 92.6 percent are composed of silicate (stone) and 5.7 percent are composed of iron and nickel; the rest are a mixture of the three materials. Stony meteorites are the hardest to identify since they look very much like terrestrial rocks. Since asteroids are material from the very early solar system, scientists are interested in their composition. Spacecraft that have flown through the asteroid belt have found that the belt is really quite empty and that asteroids are separated by very large distances.

Jupiter

Beyond Mars and the asteroid belt, in the outer regions of our solar system, lie the giant planets of Jupiter, Saturn, Uranus and Neptune. In 1972, NASA sent the first of four spacecraft to conduct the initial surveys of these colossal worlds of gas and their moons of ice and rock.

Pioneer 10, launched in March 1972, was the first spacecraft to penetrate the asteroid belt and travel to the outer regions of the solar system. In December 1973, it returned the first close-up images of Jupiter, flying within 132,252 km (82,178 mi) of the planet's banded cloud tops. Pioneer 11 followed a year later. Voyagers 1 and 2, launched in the summer of 1977, returned spectacular photographs of Jupiter and its family of satellites during flybys in 1979. These travelers found Jupiter to be a swirling ball of liquid hydrogen and helium, topped with a colorful atmosphere composed primarily of gaseous hydrogen and helium. Ammonia ice crystals form white Jovian clouds. Sulfur compounds (and perhaps phosphorus) may produce the brown and orange hues that characterize Jupiter's atmosphere.

It is likely that methane, ammonia, water and other gases react to form organic molecules in the regions between the planet's frigid cloud tops and the warmer hydrogen ocean lying below. Because of Jupiter's atmospheric dynamics, however, these organic compounds, if they exist, are probably short-lived.

The Great Red Spot has been observed for centuries through telescopes on Earth. This hurricane-like storm in Jupiter's atmosphere is more than twice the size of our planet. As a high-pressure region, the Great Red Spot spins in a direction opposite to that of low-pressure storms on Jupiter; it is surrounded by swirling currents that rotate around the spot and are sometimes consumed by it. The Great Red Spot might be a million years old.

The Solar System

<p>Our spacecraft detected lightning in Jupiter's upper atmosphere and observed auroral emissions similar to Earth's northern lights at the Jovian polar regions. Voyager 1 returned the first images of a faint, narrow ring encircling Jupiter. Largest of the solar system's planets, Jupiter rotates at a dizzying pace, once every 9 hours 55 minutes 30 seconds. The massive planet takes almost 12 Earth years to complete a journey around the Sun. With 16 known moons, Jupiter is something of a miniature solar system.</p>	<p>producing a liquid-water ocean. The ocean is covered by an ice crust that has formed where water is exposed to the cold of space. Europa's core is made of rock that sank to its center. Like Europa, the other two Galilean moons - Ganymede and Callisto - are worlds of ice and rock. Ganymede is the largest satellite in the solar system, larger than the planets Mercury and Pluto. The satellite is composed of about 50 percent water or ice and the rest rock. Ganymede's surface has areas of different brightness, indicating that, in the past, material oozed out of the moon's interior and was deposited at various locations on the surface.</p>
<p>A new mission to Jupiter, the Galileo Project, is underway. After a 6-year cruise that will take the Galileo Orbiter once past Venus, twice past Earth and the Moon, and once past two asteroids, the spacecraft will drop an atmospheric probe into Jupiter's cloud layers and relay data back to Earth. The Galileo Orbiter will spend 2 years circling the planet and lying close to Jupiter's large moons, exploring in detail what the two Voyagers and two Voyagers revealed.</p>	<p>Callisto, only slightly smaller than Ganymede, has the lowest density of any Galilean satellite, suggesting that large amounts of water are part of its composition. Callisto is the most heavily cratered object in the solar system; no activity during its history has erased old craters except more impacts.</p>
<p>Galilean Satellites</p> <p>In 1610, Galileo Galilei aimed his telescope at Jupiter and spotted four points of light orbiting the planet. For the first time, humans had seen the moons of another world. In honor of their discoverer, these four bodies would become known as the Galilean satellites or moons. But Galileo might have happily traded his honor for one look at the dazzling photographs returned by the Voyager spacecraft as they flew past these planet-sized satellites.</p>	<p>Saturn</p> <p>No planet in the solar system is adorned like Saturn. Its exquisite ring system is unrivaled. Like Jupiter, Saturn is composed mostly of hydrogen. But in contrast to the vivid colors and wild lightning seen found in Jovian clouds, Saturn's atmosphere has a more subtle, butterscotch hue, and its markings are ruled by high-altitude haze. Green Saturn's somewhat placid-looking appearance, scientists were surprised at the high-velocity equatorial jet stream that blows some 1,770 km (1,100 mi) per hour.</p>
<p>One of the most remarkable findings of the Voyager mission was the presence of active volcanoes on the Galilean moon Io. Volcanic eruptions had never before been observed on a world other than Earth. The Voyager cameras identified at least nine active volcanoes on Io, with plumes of ejected material extending as far as 280 km (175 mi) above the moon's surface. Io's pizza-colored terrain, marked by orange and yellow hues, is probably the result of sulfur-rich materials brought to the surface by volcanic activity. Volcanic activity on Io is satellite of the result of tidal heating caused by the gravitational tug-of-war between Io, Jupiter, and the other three Galilean moons.</p>	<p>Three American spacecraft have visited Saturn. Pioneer 11 sped by the planet and its moon Titan in September 1979, returning the first close-up images. Voyager 1 followed in November 1980, sending back breathtaking photographs that revealed for the first time the complexities of Saturn's ring system and moons. Voyager 2 flew by the planet and its moons in August 1981.</p>
<p>Europa, approximately the same size as our Moon, is the brightest Galilean satellite. The moon's surface displays an array of streams, indicating the crust has been fractured. Caught in a gravitational tug-of-war like Io, Europa has been heated enough to cause its interior to melt.</p>	<p>The rings are composed of countless low-density particles orbiting individually around Saturn's equator at progressive distances from the cloud tops. Analysis of spacecraft radio waves passing through the rings showed that the particles vary widely in size, ranging from dust to house-sized boulders. The rings are bright because they are mostly ice and frosted rock.</p>

The Solar System

Pluto

Pluto is the most distant of the planets, yet the eccentricity of its orbit periodically carries it inside Neptune's orbit, where it has been since 1979 and where it will remain until March 1999. Pluto's orbit is also highly inclined – tilted 17 degrees to the orbital plane of the other planets.

Discovered in 1930, Pluto appears to be little more than a celestial snowball. The planet's diameter is calculated to be approximately 2,300 km (1,400 mi), only 2/3 the size of our Moon. Geoclassical observations indicate that Pluto's surface is covered with methane ice and that there is a thin atmosphere of air that may freeze and fall to the surface as the planet moves away from the Sun. Observations also show that Pluto's spin axis is tipped by 122 degrees.

The planet has one known satellite, Charon, discovered in 1978. Charon's surface composition is different from Pluto's: the moon appears to be covered with water-ice rather than methane ice. Its orbit is gravitationally locked with Pluto, so both bodies always keep the same hemisphere facing each other. Pluto's and Charon's rotational period and Charon's period of revolution are all 6.4 Earth days.

No spacecraft have ever visited Pluto.

Comets

The outermost members of the solar system occasionally pay a visit to the inner planets. As asteroids are the rocky and metallic remnants of the formation of the solar system, comets are the icy debris from that dim beginning and can survive only far from the Sun. Most comet nuclei reside in the Oort Cloud, a loose swarm of objects in a halo beyond the planets and reaching perhaps halfway to the nearest star.

Comet nuclei orbit in this frozen abyss until they are gravitationally perturbed into new orbits that carry them close to the Sun. As a nucleus falls inside the orbits of the outer planets, the volatile elements of which it is made gradually warm; by the time the nucleus enters the region of the inner planets, these volatile elements are boiling. The nucleus itself is irregular and only a few miles across, and is made principally of water-ice with methane and ammonia.

As these materials boil off the nucleus, they form a coma or cloud-like "head" that can measure tens of thousands of kilometers across. The coma grows as the comet gets closer to the Sun. The stream of charged particles coming from the Sun pushes on this cloud, blowing it back and giving rise to the comet's "tails." Gases and ions are blown directly back from the nucleus, but dust particles are pushed more slowly. As the nucleus continues in its orbit, the dust particles are left behind in a curved arc.

Both the gas and dust tails point away from the Sun; in effect, the comet chases its tails as it recedes from the Sun. The tails can reach 150 million km (95 million mi) in length, but the total amount of material contained in this dramatic display would fit in an ordinary suitcase. Comets – from the Latin comets, meaning "long-haired" – are essentially dramatic light shows.

Some comets pass through the solar system only once, but others have their orbits gravitationally modified by a close encounter with one of the giant outer planets. These latter visitors can enter closed elliptical orbits and repeatedly return to the inner solar system.

Halley's Comet is the most famous example of a relatively short-period comet, returning on an average of once every 75 years and orbiting from beyond Neptune to within Venus' orbit. Cometary sightings of the comet go back to 240 B.C. This regular visitor to our solar system is named for Sir Edmund Halley, because he plotted the comet's orbit and predicted its return, based on earlier sightings and Newtonian laws of motion. His name became part of astronomical lore when, in 1759, the comet returned on schedule. Unfortunately, Sir Edmund did not live to see it.

A comet can be very prominent in the sky if it passes comparatively close to Earth. Unfortunately, on its most recent appearance, Halley's Comet passed no closer than 62.4 million km (28.8 million mi) from our planet. The comet was visible to the naked eye, especially for viewers in the southern hemisphere, but it was not spectacular. Comets have been so bright, on rare occasions, that they were visible during daytime. Historically, comet sightings have been interpreted as bad omens and have been artistically rendered as daggers in the sky.

Several spacecraft have flown by comets at high speed; the first was NASA's International Cometary Explorer in 1985. An armada of five spacecraft (two Japanese, two Soviet, and the Giotto spacecraft from the European Space Agency) flew by Halley's Comet in 1986.

USA Planetary Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Martiner 1	Venus Flyby	Jul 22, 1962		Destroyed shortly after launch when vehicle veered off course.
Martiner 2	Venus Flyby	Aug 27, 1962	Dec 14, 1962	First successful planetary flyby. Provided instrument scanning data. Entered solar orbit.
Martiner 3	Mars Flyby	Nov 5, 1964		Shroud failed to jettison properly; Sun and Cuprous not acquired; spacecraft did not encounter Mars. Transmissions ceased 9 hours after launch. Entered solar orbit.
Martiner 4	Mars Flyby	Nov 28, 1964	Jul 14, 1965	Provided first close-range images of Mars, confirming the existence of surface craters. Entered solar orbit.
Martiner 5	Venus Flyby	Jun 14, 1967	Oct 19, 1967	Advanced instruments returned data on Venus' surface temperature, atmosphere, and magnetic field environment. Entered solar orbit.
Martiner 6	Mars Flyby	Feb 24, 1969	Jul 31, 1969	Provided high-resolution photos of Martian surface, concentrating on equatorial region. Entered solar orbit.
Martiner 7	Mars Flyby	Mar 27, 1969	Aug 5, 1969	Provided high-resolution photos of Martian surface, concentrating on southern hemisphere. Entered solar orbit.
Martiner 8	Mars Orbiter	May 8, 1971		Centaur stage malfunctioned shortly after launch.
Martiner 9	Mars Orbiter	May 30, 1971	Nov 13, 1971	First interplanetary probe to orbit another planet. During nearly a year of operations, obtained detailed photographs of the Martian moons, Phobos and Deimos, and mapped 100 percent of the Martian surface. Spacecraft is inoperable in Mars orbit.
Pioneer 10	Jupiter Flyby	Mar 2, 1972	Dec 3, 1973	First spacecraft to penetrate the Asteroid Belt. Obtained first close-up images of Jupiter, investigated its magnetosphere, atmosphere and internal structure. Still operating in the outer Solar System.

USA Planetary Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Pioneer 11	Jupiter/Saturn Flyby	Apr 5, 1973	Dec 2, 1974 (Jupiter) Sep 1, 1979 (Saturn)	The successful encounter of Jupiter by Pioneer 10 permitted Pioneer 11 to be re-targeted in flight to fly by Jupiter and encounter Saturn. Still operating in the outer Solar System.
Messenger	Venus/Mercury Flyby	Nov 3, 1973	Feb 5, 1974 (Venus) Mar 29, 1974 (Mercury) Sep 21, 1974 (Mercury) Mar 16, 1975 (Mercury)	First dual-planet mission. Used gravity of Venus to attain Mercury encounter. Provided first ultraviolet photographs of Venus; returned close-up photographs and detailed data of Mercury. Transmitter was turned off March 24, 1975, when attitude control gas was depleted. Spacecraft is inoperable in solar orbit.
Viking 1	Mars Orbiter and Lander	Aug 20, 1975	Jul 19, 1976 (in orbit) Jul 20, 1976 (landed)	First U.S. attempt to soft land a spacecraft on another planet. Landed on the Plain of Chryse. Photographs showed an orange-red plain strewn with rocks and sand dunes. Both Orbiters took a total of 52,000 images during their mission; approximately 87% percent of the surface was imaged. Orbiter 1 operated until August 7, 1980, when it used the last of its attitude control gas. Lander 1 ceased operating on Nov 13, 1983.
Viking 2	Mars Orbiter and Lander	Sep 9, 1975	Aug 7, 1976 (in orbit) Sep 3, 1976 (landed)	Landed on the Plain of Utopia. Discovered water frost on the surface at the end of the Martian winter. The two Landers took 4,500 images of the surface and provided over 3 million weather reports. Orbiter 2 stopped operating on July 24, 1978, when its attitude control gas was depleted because of a leak. Lander 2 operated until April 12, 1980, when it was shut down due to battery degeneration.
Voyager 1	Tour of Jupiter and Saturn	Sep 5, 1977	Mar 5, 1979 (Jupiter) Nov 12, 1980 (Saturn)	Investigated the Jupiter and Saturn planetary systems. Returned spectacular photographs and provided evidence of a ring encircling Jupiter. Continues to return data enroute toward interstellar space.
Voyager 2	Tour of the Outer Planets	Aug 20, 1977	Jul 9, 1979 (Jupiter) Aug 25, 1981 (Saturn) Jan 24, 1986 (Uranus) Aug 25, 1988 (Neptune)	Investigated the Jupiter, Saturn and Uranus planetary systems. Provided first close-up photographs of Uranus and its moons. Used gravity-assist at Uranus to continue on to Neptune. Swept within 1280 km of Neptune on August 25, 1989. The spacecraft will continue into interstellar space.

B-62

USA Planetary Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Pioneer	Venus 1 Venus Orbiter	May 20, 1978	Dec 4, 1978	Mapped Venus' surface by radar, imaged its cloud systems, explored its magnetic environment and observed interactions of the solar wind with a planet that has no intrinsic magnetic field. Provided radar altimetry maps for nearly all of the surface of Venus, resolving features down to about 50 miles across. Still operating in orbit around Venus.
Pioneer	Venus 2 Venus Probe	Aug 8, 1978	Dec 9, 1978	Dispatched heat-resisting probes to penetrate the atmosphere at widely separated locations and measured temperature, pressure, and density down to the planet's surface. Probes impacted on the surface.
Magellan	Venus Radar Mapping	May 4, 1989	Aug 1990	Returned radar images that showed geological features unlike anything seen on Earth. One area scientists called crater farms; another area was covered by a checkered pattern of closely spaced fault lines running at right angles. Most intriguing were indications that Venus still may be geologically active. Will continue to map the entire surface and observe evidence of volcanic eruption into 1991.
Galileo	Jupiter Orbiter and Probe	Oct 18, 1989	Dec 8, 1990 (Earth) Feb 1991 (Venus)	A sophisticated two-part spacecraft, an Orbiter will be inserted into orbit around Jupiter to thoroughly sense the planet, its satellites and the Jovian magnetosphere and a Probe will descend into the atmosphere of Jupiter to make in situ measurements of its nature. Galileo flew by Venus, conducting the first infrared imagery and spectroscopy below the planet's cloud deck and used the Earth's gravity to speed it on its way to Jupiter.
Mars Observer	Mars Orbiter	Sep 25, 1992	Nov 1993 (expected)	A single spacecraft in orbit around Mars to examine the surface and atmosphere of Mars for 1 Martian year (687 Earth days). The objectives of the mission are to determine the elemental and mineralogical composition of the surface, global surface topography, and gravity and magnetic field. It will use the Mars Balloon Relay (MBR) to send communications back to Earth from Russian landers in 1995.

CIS (USSR) Planetary Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Venera 5	Venus Probe	Jan 5, 1969	Mar 16, 1969	Entry velocity reduced by atmospheric braking before main parachute was deployed. Capsule entered atmosphere on planet's dark side; transmitted data for 53 minutes while traveling into the atmosphere before being crushed.
Venera 6	Venus Probe	Jan 10, 1969	Mar 17, 1969	Descent capsule entered the atmosphere on the planet's dark side; transmitted data for 51 minutes while traveling into the atmosphere before being crushed.
Venera 7	Venus Lander	Aug 17, 1970	Dec 15, 1970	Entry velocity was reduced aerodynamically before parachute deployed. After fast descent through upper layers, the parachute canopy opened fully, slowing descent to allow fuller study of lower layers. Gradually increasing temperatures were transmitted. Returned data for 23 minutes after landing.
Cosmos 359	Venus Lander	Aug 22, 1970		Unsuccessful Venus attempt; failed to achieve escape velocity.
Cosmos 419	Mars Probe	May 10, 1971		First use of Proton launcher for a planetary mission. Placed in Earth orbit but failed to separate from fourth stage.
Mars 2	Mars Orbiter and Lander	May 19, 1971	Nov 27, 1971	Landing capsule separated from spacecraft and made first, unsuccessful attempt to soft land. Lander carried USSR pennant. Orbiter continued to transmit data.
Mars 3	Mars Orbiter and Lander	May 28, 1971	Dec 2, 1971	Landing capsule separated from spacecraft and landed in the southern hemisphere. Onboard camera operated for only 20 seconds, transmitting a small panoramic view. Orbiter transmitted for 3 months.
Venera B	Venus Lander	Mar 27, 1972	Jul 22, 1972	As the spacecraft entered the upper atmosphere, the descent module separated while the service module burned up in the atmosphere. Entry speed was reduced by aerodynamic braking before parachute deployment. During descent, a refrigeration system was used to offset high temperatures. Returned data on temperature, pressure, light levels, and descent rates. Transmitted from surface for about 1 hour.

CIS (USSR) Planetary Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Cosmos 482	Venus Lander	Mar 31, 1972		Unsuccessful Venus probe; escape stage misfired leaving craft in Earth orbit.
Mars 4 & 5	Mars Orbiters and Landers	Jul 21, 1973 Jul 25, 1973	Feb 10, 1974 Feb 12, 1974	Pair of spacecraft launched to Mars. Mars 4 retro rockets failed to fire, preventing orbit insertion. As it passed the planet, Mars 4 returned one swath of pictures and some radio occultation data. Mars 5 was successfully placed in orbit, but operated only a few days, returning photographs of a small portion of southern hemisphere of Mars.
Mars 6 & 7	Mars Orbiters and Landers	Aug 5, 1973 Aug 9, 1973	Mar 12, 1974 Mar 9, 1974	Second pair of spacecraft launched to Mars. Mars 6 lander module transmitted data during descent, but transmissions abruptly ceased when the landing rockets were fired. Mars 7 descent module was separated from the main spacecraft due to a problem in the operation of one of the onboard systems, and passed by the planet.
Venera 9	Venus Orbiter and Lander	Jun 8, 1975	Oct 22, 1975	First spacecraft to transmit a picture from the surface of another planet. The lander's signals were transmitted to Earth via the orbiter. Utilized a new parachute system, consisting of six chutes. Signals continued from the surface for nearly 2 hrs 53 mins.
Venera 10	Venus Orbiter and Lander	Jun 14, 1975	Oct 25, 1975	During descent, atmospheric measurements and details of physical and chemical contents were transmitted via the orbiter. Transmitted pictures from the surface of Venus.
Venera 11	Venus Orbiter and Lander	Sep 9, 1978	Dec 25, 1978	Arrived at Venus 4 days after Venera 12. The two landers took nine samples of the atmosphere at varying heights and confirmed the basic components. Imaging system failed; did not return photos. Operated for 95 minutes.
Venera 12	Venus Orbiter and Lander	Sep 14, 1978	Dec 21, 1978	A transit module was positioned to relay the lander's data from behind the planet. Returned data on atmospheric pressure and components. Did not return photos; imaging system failed. Operated for 110 minutes.

CIS (USSR) Planetary Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Venera 13	Venus Orbiter and Lander	Oct 31, 1961	Mar 1, 1962	Provided first soil analysis from Venusian surface. Transmitted eight color pictures via orbiter. Measured atmospheric chemical and isotopic composition, electric discharges, and cloud structure. Operated for 57 minutes.
Venera 14	Venus Orbiter and Lander	Nov 4, 1961	Mar 3, 1962	Transmitted details of the atmosphere and clouds during descent; soil sample taken. Operated for 57 minutes.
Venera 15	Venus Orbiter	Jun 2, 1963	Oct 10, 1963	Obtained first high-resolution pictures of polar area. Compiled thermal map of almost entire northern hemisphere.
Venera 16	Venus Orbiter	Jun 7, 1963	Oct 16, 1963	Provided computer mosaic images of a strip of the northern continent. Soviet and U.S. geologists cooperated in studying and interpreting these images.
Vega 1 & 2	Venus/Halley	Dec 15, 1984 Dec 21, 1984	Jun 11, 1986 (Venus) Mar 6, 1986 (Halley) Jun 15, 1985 (Venus) Mar 9, 1986 (Halley)	International two-spacecraft project using Venusian gravity to send them on to Halley's Comet after dropping the Venusian probes. The Venus landers studied the atmosphere and acquired a surface soil sample for analysis. Each lander released a helium-filled instrumented balloon to measure cloud properties. The other half of the Vega payloads, carrying cameras and instruments, continued on to encounter Comet Halley.
Phobos 1 & 2	Mars/Phobos	Jul 7, 1988 Jul 12, 1988	Jan 1989 (Mars) Jan 1989 (Mars)	International two-spacecraft project to study Mars and its moon, Phobos. Phobos 1 was disabled by a ground control error. Phobos 2 was successfully inserted into Martian orbit in January 1989 to study the Martian surface, atmosphere, and magnetic field. On March 27, 1989, communications with Phobos 2 were lost and efforts to contact the spacecraft were unsuccessful.

USA Lunar Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Pioneer 1	Lunar Orbit	Oct 11, 1958		Did not achieve lunar trajectory; launch vehicle second and third stages did not separate evenly. Returned data on Van Allen Belt and other phenomena before reentering on October 12, 1958.
Pioneer 2	Lunar Orbit	Nov 8, 1958		Third stage of launch vehicle failed to ignite. Returned data that indicated the Earth's equatorial region has higher flux and energy levels than previously believed. Did not achieve orbit.
Pioneer 3	Lunar Probe	Dec 6, 1958		First stage of launch vehicle cut off prematurely; transmitted data on dual bands of radiation around Earth. Reentered December 7, 1958.
Pioneer 4	Lunar Probe	Mar 3, 1959	Mar 4, 1959	Passed within 37,300 miles from the Moon; returned excellent data on radiation. Entered solar orbit.
Pioneer P-3	Lunar Orbit	Nov 26, 1959		Payload stroud broke away 45 seconds after liftoff. Did not achieve orbit.
Ranger 1	Lunar Probe	Aug 23, 1961		Flight test of lunar spacecraft carrying experiments to collect data on solar plasma, particles, magnetic fields, and cosmic rays. Launch vehicle failed to restart resulting in low Earth Orbit. Reentered August 30, 1961.
Ranger 2	Lunar Probe	Nov 18, 1961		Flight test of spacecraft systems for future lunar and interplanetary missions. Launch vehicle altitude control system failed, resulting in low Earth orbit. Reentered November 20, 1961.
Ranger 3	Lunar Landing	Jan 26, 1962		Launch vehicle malfunction resulted in spacecraft missing the Moon by 22,862 miles. Spectrometer data on radiation were received. Entered solar orbit.
Ranger 4	Lunar Landing	Apr 23, 1962	Apr 26, 1962	Failure of central computer and sequencer system rendered experiments useless. No telemetry received. Impacted on far side of the Moon.

B-68

USA Lunar Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Ranger 5	Lunar Landing	Oct 18, 1962		Power failure rendered all systems and experiments useless; 4 hours of data received from gamma ray experiment before battery depletion. Passed within 450 miles of the Moon. Entered solar orbit.
Ranger 6	Lunar Photo	Jan 30, 1964	Feb 2, 1964	TV cameras failed; no data returned. Impacted in the Sea of Tranquility area.
Ranger 7	Lunar Photo	Jul 28, 1964	Jul 31, 1964	Transmitted high quality photographs, man's first close-up lunar views, before impacting in the Sea of Clouds area.
Ranger 8	Lunar Photo	Feb 17, 1965	Feb 20, 1965	Transmitted high quality photographs before impacting in the Sea of Tranquility area.
Ranger 9	Lunar Photo	Mar 21, 1965	Mar 24, 1965	Transmitted high quality photographs before impacting in the Crater of Alphonsus. Almost 200 pictures were shown live via commercial television in the first TV spectacular from the Moon.
Surveyor 1	Lunar Lander	May 30, 1966	Jun 2, 1966	First U.S. spacecraft to make a fully controlled soft landing on the Moon; landed in the Ocean of Storms area. Returned high quality images, from horizon views of mountains to close-ups of its own mirrors, and selenological data.
Lunar Orbiter 1	Lunar Orbiter	Aug 10, 1966	Aug 14, 1966	Photographed over 2 million square miles of the Moon's surface. Took first photo of Earth from lunar distance. Impacted on the far side of the Moon on October 29, 1966.
Surveyor 2	Lunar Lander	Sep 20, 1966	Sep 22, 1966	Spacecraft crashed onto the lunar surface southeast of the crater Copernicus when one of its three vernier engines failed to ignite during a mid-course maneuver.
Lunar Orbiter 2	Lunar Orbiter	Nov 6, 1966	Nov 10, 1966	Photographed landing sites, including the Ranger 8 landing point, and surface debris tossed out at impact. Impacted the Moon on October 11, 1967.

USA Lunar Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Lunar Orbiter 3	Lunar Orbiter	Feb 4, 1967	Feb 8, 1967	Photographed lunar landing sites; provided gravitational field and lunar environment data. Impacted the Moon on October 9, 1967.
Surveyor 3	Lunar Lander	Apr 17, 1967	Apr 19, 1967	Vernier engines failed to cut off as planned and the spacecraft bounced twice before landing in the Ocean of Storms. Returned images, including a picture of the Earth during lunar eclipse, and used a scoop to make the first excavation and bearing test on an extraterrestrial body. Returned data on a soil sample. Visual range of TV cameras was extended by using two flat mirrors.
Lunar Orbiter 4	Lunar Orbiter	May 4, 1967	May 8, 1967	Provided the first pictures of the lunar south pole. Impacted the Moon on Oct 6, 1967.
Surveyor 4	Lunar Lander	Jul 14, 1967	Jul 17, 1967	Radio contact was lost 2-1/2 minutes before touchdown when the signal was abruptly lost. Impacted in Sinus Medii.
Lunar Orbiter 5	Lunar Orbiter	Aug 1, 1967	Aug 5, 1967	Increased lunar photographic coverage to better than 99%. Used in orbit as a tracking target. Impacted the Moon on January 31, 1968.
Surveyor 5	Lunar Lander	Sep 8, 1967	Sep 10, 1967	Technical problems were successfully solved by tests and maneuvers during flight. Soft-landed in the Sea of Tranquility. Returned images and obtained data on lunar surface radar and thermal reflectivity. Performed first on-site chemical soil analysis.
Surveyor 6	Lunar Lander	Nov 7, 1967	Nov 9, 1967	Soft-landed in the Sinus Medii area. Returned images of the lunar surface, Earth, Jupiter, and several stars. Spacecraft engines were restarted; lifting the spacecraft about 10 feet from the surface and landing it 8 feet from the original site.
Surveyor 7	Lunar Lander	Jan 7, 1968	Jan 9, 1968	Landed near the crater Tycho. Returned stereo pictures of the surface and of rocks that were of special interest. Provided first observation of artificial light from Earth.

B-70

CIS (USSR) Lunar Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Luna 1	Lunar Impact	Jan 2, 1959		Intended to impact the Moon; carried instruments to measure radiation. Passed the Moon and went into solar orbit.
Luna 2	Lunar Impact	Sep 12, 1959	Sep 15, 1959	First spacecraft to reach another celestial body. Impacted east of the Sea of Serenity; carried USSR pennants.
Luna 3	Lunar Probe	Oct 4, 1959		First spacecraft to pass behind Moon and send back pictures of far side. Equipped with a TV processing and transmission system; returned pictures of far side including composite full view of far side. Reentered Apr 29, 1960.
Sputnik 25	Lunar Probe	Jan 4, 1963		Unsuccessful lunar attempt.
Luna 4	Lunar Orbiter	Apr 2, 1963		Attempt to solve problems of landing instrument containers. Contact lost as it passed the Moon. Barycentric orbit.
Luna 5	Lunar Lander	May 9, 1965	May 12, 1965	First soft landing attempt. Retrorocket malfunctioned; spacecraft impacted in the Sea of Clouds.
Luna 6	Lunar Lander	Jun 8, 1965		During midcourse correction maneuver, engine failed to switch off. Spacecraft missed Moon and entered solar orbit.
Zond 3	Lunar Probe	Jul 18, 1965		Photographed lunar far side and transmitted photos to Earth 9 days later. Entered solar orbit.
Luna 7	Lunar Lander	Oct 4, 1965	Oct 7, 1965	Retrockets fired early; crashed in Ocean of Storms.
Luna 8	Lunar Lander	Dec 3, 1965	Dec 6, 1965	Retrockets fired late; crashed in Ocean of Storms.

B-71

CIS (USSR) Lunar Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Luna 9	Lunar Lander	Jan 31, 1966	Feb 3, 1966	First successful soft landing; first TV transmission from lunar surface. Three panoramas of the lunar landscape were transmitted from the eastern edge of the Ocean of Storms.
Cosmos 111	Lunar Probe	Mar 11, 1966		Unsuccessful lunar attempt. Reentered March 16, 1966.
Luna 10	Lunar Orbiter	Mar 31, 1966		First lunar satellite. Studied lunar surface radiation and magnetic field intensity; monitored strength and variation of lunar gravitation. Selenocentric orbit.
Luna 11	Lunar Orbiter	Aug 24, 1966		Second lunar satellite. Data received during 277 orbits. Selenocentric orbit.
Luna 12	Lunar Orbiter	Oct 22, 1966		TV system transmitted large-scale pictures of Sea of Rains and Crater Aristarchus areas. Tested electric motor for Lunokhod's wheels. Selenocentric orbit.
Luna 13	Lunar Lander	Dec 21, 1966	Dec 24, 1966	Soft landed in Ocean of Storms and sent back panoramic views. Two arms were extended to measure soil density and surface radioactivity.
Luna 14	Lunar Orbiter	Apr 7, 1968		Studied gravitational field and "stability of radio signals sent to spacecraft at different locations in respect to the Moon." Made further tests of geared electric motor for Lunokhod's wheels. Selenocentric orbit.
Zond 5	Circumlunar	Sep 15, 1968		First spacecraft to circumnavigate the Moon and return to Earth. Took photographs of the Earth. Capsule was recovered from the Indian Ocean on September 21, 1968. Russia's first sea recovery.
Zond 6	Circumlunar	Nov 10, 1968		Second spacecraft to circumnavigate the Moon and return to Earth "to perfect the automatic functioning of a manned spaceship that will be sent to the Moon." Photographed lunar far side. Reentry made by skip-glide technique; capsule was recovered on land inside the Soviet Union on November 17, 1968.

CIS (USSR) Lunar Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Luna 15	Lunar Sample Return	Jul 13, 1969	Jul 21, 1969	First lunar sample return attempt. Began descent maneuvers on its 52nd revolution. Spacecraft crashed at the end of a 4 minute descent in the Sea of Crises.
Zond 7	Circumlunar	Aug 7, 1969		Third circumlunar flight. Far side of Moon photographed. Color pictures of Earth and Moon brought back. Reentry by skip-glide technique on August 14, 1969.
Cosmos 300	Lunar Probe	Sep 23, 1969		Unsuccessful lunar attempt. Reentered September 27, 1969.
Cosmos 305	Lunar Probe	Oct 22, 1969		Unsuccessful lunar attempt. Reentered October 24, 1969.
Luna 16	Lunar Sample Return	Sep 12, 1970	Sep 20, 1970	First recovery of lunar soil by an automatic spacecraft. Controlled landing achieved in Sea of Fertility; automatic drilling rig deployed; samples collected from lunar surface and returned to Earth on September 24, 1970.
Zond 8	Circumlunar	Oct 20, 1970		Fourth circumlunar flight. Color pictures taken of Earth and Moon. Russia's second sea recovery occurred on October 27, 1970, in the Indian Ocean.
Luna 17	Lunar Rover	Nov 10, 1970	Nov 17, 1970	Carrying the first Moon robot, soil landed in Sea of Raines. Lunokhod 1, driven by 5-man team on Earth, traveled over the lunar surface for 11 days; transmitted photos and analyzed soil samples.
Luna 18	Lunar Lander	Sep 2, 1971		Attempted to land in Sea of Fertility on September 11, 1971. Communications ceased shortly after command was given to start descent engine.
Luna 19	Lunar Orbiter	Sep 28, 1971		From lunar orbit, studied Moon's gravitational field; transmitted TV pictures of the surface. Selenocentric orbit.

B-73

CIS (USSR) Lunar Space Flights

SPACECRAFT	MISSION	LAUNCH DATE	ARRIVAL DATE	REMARKS
Luna 20	Lunar Sample Return	Feb 14, 1972		Soft landed in Sea of Crises. Used "photo-telemetric device" to relay pictures of surface. A rotary-percussion drill was used to drill into rock; samples were lifted into a capsule on ascent stage and returned to Earth on Feb 25, 1972.
Luna 21	Lunar Rover	Jan 8, 1973	Jan 15, 1973	Carried improved equipment and additional instruments; second Lunokhod rover soft landed near the Sea of Serenity. Lunar surface pictures were transmitted and experiments were performed. Ceased operating on the 5th lunar day.
Luna 22	Lunar Orbiter	May 29, 1974	Jun 2, 1974	Placed in circular lunar orbit then lowered to obtain TV panoramas of high quality and good resolution. Altimeter readings were taken and chemical rock composition was determined by gamma radiation. Selenocentric orbit.
Luna 23	Lunar Sample Return	Oct 28, 1974		Landed on the southern part of the Sea of Crises on November 6, 1974. Device for taking samples was damaged; no drilling or sample collection possible.
Luna 24	Lunar Sample Return	Aug 9, 1976	Aug 14, 1976	Landed in Sea of Crises on August 18, 1976. Carried larger soil carrier. Core samples were drilled and returned. U.S. and British scientists were given samples for analyses.

B-74

NASA Major Launch Record

1958

MISSION/ Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mths.)	CURRENT ORBITAL PARAMETERS	WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)		
1958 Pioneer I (U) Eta I	Thor-Able I 190 (U)	Oct 11		DOWN OCT 12, 1958	34.2	Measures magnetic fields around Earth or Moon. Error in burnout velocity and angle; did not reach Moon. Returned 43 hours of data on extent of radiation belt, hydromagnetic oscillations of magnetic field, density of micrometeorites in interplanetary space, and interplanetary magnetic field.		
Beacon I (U)	Jupiter C (U)	Oct 23		DID NOT ACHIEVE ORBIT	4.2	Thin plastic spheres (12 feet in diameter after inflation) to study atmosphere before reentry.		
Pioneer II (U)	Thor-Able I 129 (U)	Nov 8		DID NOT ACHIEVE ORBIT	39.1	Measurement of magnetic fields around Earth or Moon. Third stage failed to ignite. Its brief data provided evidence that equatorial region about Earth has higher flux and higher energy radiation than previously considered.		
Pioneer III (U)	Juno II (U)	Dec 6		DOWN DEC 7, 1958	5.9	Measurement of radiation in space. Error in burnout velocity and angle; did not reach Moon. During its flight, discovered second radiation belt around Earth.		
1959 Vanguard II (U) Alpha I	Vanguard (SLV-4) (U)	Feb 17	122.8	3054	557	32.9	9.4	Sphere (20 inches in diameter) to measure cloud cover. First Earth probe from satellite. Interpretation of data difficult because satellite destroyed by reentry.
Pioneer IV (S) Nu 1	Juno II (S)	Mar 3		HELIOCENTRIC ORBIT	6.1	Measurement of radiation in space. Achieved Earth-Moon trajectory; returned excellent radiation data. Passed within 37,300 miles of the Moon on March 4, 1959.		
Vanguard (U)	Vanguard (SLV-6) (U)	Apr 13		DID NOT ACHIEVE ORBIT	10.6	Payload consisted of two independent spheres. Sphere A contained a precise magnetometer to map Earth's magnetic field. Sphere B was a 30-inch inflatable sphere for optical tracking. Second stage failed because of damage at stage separation.		
Vanguard (U)	Vanguard (SLV-6) (U)	Jun 22		DID NOT ACHIEVE ORBIT	9.8	Magnesium alloy sphere (20 inches in diameter), to measure solar-Earth heating process which generates weather. First second-stage pressure valve failed before launch.		
Explorer (S-1) (U)	Juno II (U)	Jul 16		DID NOT ACHIEVE ORBIT	41.5	To measure Earth's radiation belt. Destroyed by Range Safety Officer 5-1/2 seconds after launch; failure of power supply to guidance system.		

B-75

NASA Major Launch Record

1959

MISSION/ Orbit Design	LAUNCH VEHICLE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS Apogee (km) Perigee (km) Incl (deg)	WEIGHT (kg)	REMARKS
Explorer 6 (S-2) (S) Delta	Thor-Able III 104 (S)	Aug 7	DOWN PRIOR TO JULY 1961	64.4	(All Launches from ESMC, unless otherwise noted) Carried instruments to study particles and meteorology. Helped in the discovery of three radiation levels, a ring of electric current circling the Earth, and obtained crude cloud cover images.
Beacon II (U)	June II (U)	Aug 14	DID NOT ACHIEVE ORBIT	4.5	Thin plastic inflatable sphere (12-feet in diameter) to study atmosphere density at various levels. Premature fuel depletion in first stage caused abort.
Big Joe (Mercury) (S)	Atlas 10 (S)	Sep 9	SUBORBITAL FLIGHT		Suborbital test of Mercury Capsule. Capsule recovered successfully after reentry test.
Vanguard III (S) Eta 1	Vanguard (SLV-7) (S)	Sep 18	512 341.7 33.4	45.4	Solar-powered magnetometer sphere with magnetometer boom, provided a comprehensive survey of the Earth's magnetic field, surveyed location of lower edge of radiation belts, and provided an accurate count of micrometeorite impacts. Last transmission December 8, 1959.
Little Joe 1 (S)	Little Joe (LV #8) (S)	Oct 4	SUBORBITAL FLIGHT		Suborbital test of the Mercury Capsule to qualify the booster for use with the Mercury Test Program.
Explorer 7 (S-1a) (S) Eta 1	June II (S)	Oct 13	DOWN JULY 16, 1969	41.5	Provided data on energetic particles, radiation, and magnetic storms. Also recorded the first micrometeorite penetration of a sensor.
Little Joe 2 (S)	Little Joe (LV #1A) (S)	Nov 4	SUBORBITAL FLIGHT		Suborbital test of Mercury Capsule to test the escape system. Vehicle functioned perfectly, but escape rocket ignited several seconds too late.
Pioneer P-3 (U)	Atlas-Able 20 (U)	Nov 26	DID NOT ACHIEVE ORBIT	168.7	Lunar Orbiter Probe, payload shroud broke away after 45 seconds.
Little Joe 3 (S)	Little Joe (LV #2) (S)	Dec 4	SUBORBITAL FLIGHT		Suborbital test of the Mercury Capsule, included escape system and biomedical tests with monkey (Sam) aboard, to demonstrate high altitude abort at max g.
1960					1960 (WFF)
Little Joe 4 (S)	Little Joe (LV #1B) (S)	Jan 21	SUBORBITAL FLIGHT		Suborbital test of Mercury Capsule included escape system and biomedical test with monkey (Miss Sam) aboard.
Pioneer V (P-2) (S)	Thor-Able IV 219 (S)	Mar 11	HELIOCENTRIC ORBIT	43.0	Sphere, 26 inches in diameter, to investigate interplanetary space between orbits of Earth and Venus; test long-range communications; analyze strength of magnetic fields.
Alpha 1 Explorer (S-46) (U)	June II (U)	Mar 23	DID NOT ACHIEVE ORBIT	16.0	Analysis of radiation energies in a highly elliptical orbit. Telemetry test shortly after first stage burnout; one of five upper stages failed to fire.

				(All Launches from ESMC, unless otherwise noted)
Mercury (S) Thor-Able II	Apr 1	98.3	695 658 48.4	122.5 First successful weather-study satellite. Demonstrated that satellites could be used to survey global weather and study other surface features from space. Transmitted 22,862 good-quality cloud-coverage pictures.
Mercury (S) Thor-Able II	Apr 1	98.3	695 658 48.4	122.5 First successful weather-study satellite. Demonstrated that satellites could be used to survey global weather and study other surface features from space. Transmitted 22,862 good-quality cloud-coverage pictures.
Mercury (MA-1) (U) Atlas 50 (U)	Jul 29			Suborbital launch Vehicle Development Test with two first and third stage. Vehicle broke up after first-stage burnout.
Mercury (A-11) (S) Thor-Delta	Aug 12			Suborbital launch Vehicle Development Test with two first and third stage. Vehicle broke up after first-stage burnout.
Pioneer (P-30) (U) Atlas-Able 80	Sep 25			175.5 DID NOT ACHIEVE ORBIT to malfunction in oxidizer system.
Scout X (U) Thor-Delta	May 13			75.3 100-foot passive reflector sphere to be used in a series of communications experiments. During coast period, attitude control jets on second stage failed.
Scout X (U) Thor-Delta	May 13			75.3 100-foot passive reflector sphere to be used in a series of communications experiments. During coast period, attitude control jets on second stage failed.
Scout II (S) Scout 1 (S)	Jul 1			Launch Vehicle Development Test, first complete Scout vehicle. (WFF)
Mercury (MA-1) (U) Atlas 50 (U)	Jul 29			Suborbital test of Mercury Capsule Recovery. The Atlas exploded 65 seconds after launch.
Echo (A-11) (S) Thor-Delta	Aug 12			75.3 First passive communications satellite (100-foot sphere). Reflected a pre-lap message from the United States to the Soviet Union.
Pioneer (P-30) (U) Atlas-Able 80	Sep 25			175.5 DID NOT ACHIEVE ORBIT to malfunction in oxidizer system.
Scout II (S) Scout 2 (S)	Oct 4			Launch Vehicle Development Test, second complete Scout vehicle. (WFF)
Explorer 6 (S-30) (S) Atlas 50 (U)	Nov 3	102.5	1361 395 49.9	40.8 Confirmed instrumentation for detailed measurements of the ionosphere. Confirmed the existence of a helium layer in the upper atmosphere. Suborbital test of Mercury Capsule to qualify capsule system. (WFF)
Atlas (A-11) (U) Thor-Delta	Nov 8			Suborbital test of Mercury Capsule to qualify capsule system. (WFF)
Thor (S) Thor-Delta	Nov 23	96.3	614 549 48.5	127.0 Test of separable trim booster. Instruments and infrared equipment for test of separable trim booster. Instruments and infrared equipment for test of separable trim booster. (WFF)
Explorer (S-56) (U) Atlas-Able 91	Dec 4			6.4 123-foot sphere to determine the density of the Earth's atmosphere. Second stage failed to ignite.
Pioneer (P-31) (U) Atlas-Able 91	Dec 15			175.9 Highly instrumented probe in lunar orbit, to investigate the environment between the Earth and the Moon. Vehicle exploded about 70 seconds after launch due to malfunction in first stage.
Mercury (MR-1A) (S) Redstone (S)	Dec 19			Unmanned Mercury spacecraft, in suborbital trajectory, impacted 235 miles down range after reaching an altitude of 135 miles and a speed of near 4,200 mph. Capsule recovered about 50 minutes after launch.

B-77

NASA Major Launch Record

1961

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS		WEIGHT (kg)	REMARKS
				Apogee (km)	Perigee (km)		
1961							(All Launches from ESMEC, unless otherwise noted)
Mercury (MR-2)	Redstone (S)	Jan 31		SUBORBITAL FLIGHT		1315.0	Suborbital test of Mercury Capsule; 16-minute flight included biomedical test with chimpanzee (Ham) aboard.
Explorer 8 (S)	Scout 4 (S)	Feb 16		DOWN APR 9, 1964		6.8	12-foot sphere to determine the density of the Earth's Atmosphere.
Mercury (MA-2)	Atlas 67 (S)	Feb 21		SUBORBITAL FLIGHT		1315.0	First spacecraft orbited by an all-solid rocket.
Explorer (S-46)	Juno II (U)	Feb 24		DID NOT ACHIEVE ORBIT		33.8	Suborbital test of Mercury Capsule; upper part of Atlas strengthened by an 8-inch wide stainless steel band. Capsule recovered less than 1 hour after launch.
Little Joe 5A (U)	Little Joe (LV #5A) (U)	Mar 18		SUBORBITAL FLIGHT		1315.0	Investigate the shape of the ionosphere. A malfunction following booster separation resulted in loss of payload telemetry, third and fourth stages failed to ignite.
Mercury (MR-BD)	Redstone (S)	Mar 24		SUBORBITAL FLIGHT		1315.0	Suborbital test of Mercury Capsule. Escape rocket motor fired prematurely and prior to capsule release.
Explorer 10 (S)	Thor-Delta (4) (S)	Mar 25		DOWN JUN 1968		35.8	Suborbital test of launch vehicle for Mercury flight to acquire further experience with booster before manned flight was attempted.
Mercury (MA-3)	Atlas 100 (U)	Apr 25		DID NOT ACHIEVE ORBIT		907.2	Injected into highly elliptical orbit. Provided information on solar winds, hydromagnetic shock waves, and reaction of the Earth's magnetic field to solar winds.
Explorer 11 (S)	Juno II (S) (4) (S)	Apr 27	14.5	1465	479	28.8	Orbital flight of Mercury capsule. Destroyed after 40 seconds by Range Safety Officer when the dual guidance system failed to pitch the vehicle over toward the horizon.
Little Joe 5B (S)	Little Joe (LV #5B) (S)	Apr 28		SUBORBITAL FLIGHT		1315.0	Placed in elliptical orbit to detect high energy gamma rays from cosmic sources and map their distribution in the sky.
Mercury (Freedom 7)	Redstone-3 (S)	May 5		SUBORBITAL FLIGHT		1315.0	Suborbital flight test to demonstrate the ability of the escape and sequence systems to function properly at max g.
Explorer (S-45a)	Juno II (U)	May 24		LANDED MAY 5, 1961		33.6	First manned suborbital flight with Alan B. Shepard, Jr. Pilot and spacecraft recovered after 15 minute, 22 second flight.
Mercury (S-5)	Scout 5 (U)	Jun 30		DID NOT ACHIEVE ORBIT		84.8	Investigate the shape of the ionosphere. Second stage ignition sequence failed.
Explorer (S-55)	Thor-Delta (5) (S)	Jul 12	100.0	791	723	47.9	Evolve launch vehicle, investigate micrometeoroid impact and penetration. Third stage failed to ignite.
Explorer 13 (S)	Thor-Delta (5) (S)	Jul 12	100.0	791	723	47.9	Development of meteorological satellite system. Provided excellent photos and infrared data. Photographed many tropical storms during 1961 hurricane season; credited with discovering Hurricane Esther.

NASA Major Launch Record

1961

MISSION/ INITIAL DESIGNATION	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS	WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km) Perigee (km) Incl (deg)		
Mercury (S) (Liberty Bell 7)	Mercury-Redstone-4 (S)	Jul 21		SUBORBITAL FLIGHT LAUNDED JUL 21, 1961	1470.0	Second manned suborbital flight with <i>Friend 1</i> Gerson. After landing, spacecraft was set out for 32 days in a desert from surface of water. Missions of 15 days and 32 seconds.
Explorer 12 (S-3) (S)	Thor-Delta (9) (S)	Aug 16		DOWN SEP 1963	37.8	First of series to investigate solar winds, interplanetary magnetic fields, and energetic particles. Identified the Van Allen Belts as a magnetosphere.
Ranger 1 (U)	Atlas-Agena B Pm 1	Aug 23		DOWN AUG 30, 1961	306.2	Flight test of lunar spacecraft carrying experiments to investigate cosmic rays, magnetic fields, and energetic particles. Agena failed to restart, resulting in low Earth orbit.
Explorer 13 (U)	Scout 6 (U)	Aug 25		DOWN AUG 28, 1961	84.8	Evaluate launch vehicle, investigate macrometeoroid impact and penetration. Third stage failed to ignite.
Mercury (MAA-4) (S)	Atlas 88 (S)	Sep 13		DOWN SEP 13, 1961	1224.7	Orbital test of Mercury capsule to test systems and ability to return capsule to predetermined recovery area after one orbit. All capsule tracking and telemetry systems failed.
A-Alpha 1 (S)	Scout 7 (S)	Oct 19		SUBORBITAL FLIGHT		Orbital test of Scout 7 vehicle. Reached altitude of 4,261 miles; provided electron density measurements.
Saturn Test (S)	Saturn I (S)	Oct 27		SUBORBITAL FLIGHT		Suborbital launch vehicle development test of S-1 booster propulsion system; verification of aerodynamic/structural design of entire vehicle.
(SA-1) (S)	AF 692A Blues Scout (U)	Nov 1		DID NOT ACHIEVE ORBIT	97.1	Orbital test of the Mercury Tracking Network. First Stage exploded 26 seconds after liftoff; other three stages destroyed by Range Safety Officer 44 seconds after launch.
Ranger II (U)	Atlas-Agena B A-1176a 1	Nov 18		DOWN NOV 20, 1961	306.2	Flight test of spacecraft systems designed for future lunar and interplanetary missions. Inoperative roll gyro prevented Agena restart resulting in a low Earth orbit.
Mercury (MAA-5) (S) A-1176a 1	Atlas 82 (S)	Nov 29		DOWN NOV 29, 1961	1315.4	Final flight test of all spacecraft systems prior to manned orbital flight. Final payload of 100 lbs on board. Spacecraft and chimpanzee recovered after two orbits.
1962						
Echo (AV-1) (S)	Thor 338 (S)	Jan 15		SUBORBITAL FLIGHT	256.0	Suborbital Communications Test. Canister ejection and opening successful, but 135-foot sphere ruptured.
Ranger III (U) Alpha 1	Atlas-Agena B 121 (U)	Jan 26		HELICOENTRIC ORBIT	329.8	Fourth and instrumented capsule on the Moon. Booster malfunction resulted in the spacecraft missing the Moon by 22,862 miles and going into solar orbit. TV pictures were unusable.

B-79

NASA Major Launch Record

1962

MISSION Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS
				Apoapse (km)	Perigee (km)	Incl (deg)		
Tiros IV (S) Beta 1	Thor-Delta (7) (S)	Feb 8	99.9	81.2	684	48.3	129.3	(All Launches from ESIMC, unless otherwise noted) Continued research and development of meteorological satellite system. U.S. Weather Bureau initiated international radio facsimile system.
Mercury (MA-6) (Friendship 7) (S) Gamma 1	Atlas (09) (S)	Feb 20		LANDED FEB 20, 1962			1354.9	First U.S. manned flight. John P. Glenn, Jr. made three orbits of the Earth. Capsule reentered after 2 1/2 minutes in the water. Mission Duration 4 hours 55 minutes 23 seconds.
Heintz 1 (U)	Scout 8 (S)	Mar 1		SUBORBITAL FLIGHT			207.7	Launch vehicle development test/Reentry test. Desired speed was not achieved.
GSO-1 (S) Zeta 1	Thor-Delta (8) (S)	Mar 7		DOWN OCT 8, 1961			331.1	Carried 13 instruments to study Sun-Earth relationships. Transmitted almost 1,000 hours of information on solar phenomena, including measurements of 75 solar flares.
Probe B (P-21a) (S)	Scout 9 (S)	Mar 29		SUBORBITAL FLIGHT				Suborbital vehicle test/scientific geoprobe. Reached an altitude of 3,910 miles, provided electron density measurements.
Ranger 4 (J) Mu 1	Atlas-Agena B (S)	Apr 23		IMPACTED MOON ON APR 26, 1962			86167.0	Second attempt to rough and instrumented capsule on Moon. Failure of computer and sequencer system rendered experiments useless. Instrumentation on board for 84 hours.
Saturn Test (SA-2) (S)	Saturn I (S)	Apr 25		SUBORBITAL FLIGHT			59.9	Suborbital launch vehicle test on speed 95 stages which was released at an altitude of 65 miles to observe its effect on the upper region of the atmosphere (Project High Water).
Atlas I (S) Omega 1	Thor-Delta (9) (S)	Apr 26		DOWN MAY 24, 1978				Carried six British experiments to study the ionosphere, solar radiation, and cosmic rays. First International Satellite. Cooperative with UK.
Centaur Test 1 (AC-1)(U)	Atlas-Centaur (E-1) (U)	May 8		SUBORBITAL FLIGHT			1349.5	Launch vehicle development test. Centaur exploded before separation.
Mercury (MA-7) (Aurora 7) (S) Tau 1	Atlas 107 (S)	May 24		LANDED MAY 24, 1962			129.3	Second orbital Manned Flight with M. Scott Carpenter. Reentered under manual control after three orbits. Mission Duration 4 hours 56 minutes 3 seconds.
Tiros V (S) A-Alpha	Thor-Delta (S)	Jun 19	99.4	869	573	58.1	77.1	Continued development of meteorological satellite system. Extended observations to higher latitudes. Observed ice breakup in northern latitudes and storm development in the mid-latitude zone.
Telstar 1 (S) A-Epsilon	Thor-Delta (10) (S)	Jul 10	157.8	5642	347	44.8	256.0	First privately built satellite to conduct communication experiments. First telephone and TV experiments transmitted. Reimbursable (A7.8.1).
Echo (ATV-2) (S)	Thor-Delta (11) (S)	Jul 18		SUBORBITAL FLIGHT				Suborbital communications test. Inflation successful, radar indicated that the sphere surface was not as smooth as planned.

MISSION/ Initl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS Apogee (km)	Perigee (km)	Incl (deg)	WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
Tanager I (P-27)(U)	Atlas-Agena B 145 (U)	Jul 22					202.8	Venus Flyby. Vehicle destroyed by Range Safety Officer about 250 seconds after launch when it veered off course.
Mariner II (P-98) (S)	Atlas-Agena B 179 (S)	Aug 27					202.8	Second Venus Flyby. First successful interplanetary probe. Passed Venus on December 14, 1962, at 21,548 miles; 109 days after launch. Provided data on solar wind, cosmic dust density, and particle and magnetic field variations.
A. Pho 1								Freezing test at 25,000 fps. Late third stage ignition; desired speed was not achieved.
Reentry II (U)	Scout 13 (U)	Aug 31						First reentry test of the 1962 hurricane season. Returned high quality cloud cover photographs.
Troca VI (S)	Thor-Delta 122 (S)	Sep 18	97.6	652	635	58.3	127.5	Proved coverage of the 1962 hurricane season. Returned high quality electron density distribution. Returned excellent data to 13 Canadian, British, and U.S. stations. Cooperative with Canada.
Adventer I (S)	Thor-Agena B B Alpha 1	Sep 29	105.2	1022	987	80.5	145.2	Monitor trapped corpuscular radiation, solar particles, cosmic radiation, and solar winds. Placed into a highly elliptical orbit; excellent data received.
Explorer 14 (S-34)(S)	Thor-Delta (13) (S)	Oct 2					40.4	Manned Orbital Flight with Walter M. Schirra, Jr. Made six orbits of the Earth. Mission Duration 3 hours 13 minutes 11 seconds.
B-Gamma 1 Mercury(MA-B) (Sigma 7) (S)	Atlas 113 (S)	Oct 3					1380.8	LANDED OCT 3, 1962
B-Delta 1 Ranger V (U) B-Eta 1	Atlas-Agena B 215 (S)	Oct 18					342.5	HELIOCENTRIC ORBIT Rough land instrumented capsule on the Moon. Malfunction caused power supply loss after 8 hours 44 minutes. Passed within 450 miles of the Moon.
Explorer 15 (S-34)(U)	Thor-Delta (14) (S)	Oct 27					44.5	Study location, composition, and decay rate of artificial radiation belt created by high altitude nuclear explosion over the Pacific Ocean. Design device failed; considerable useful data transmitted.
B-Upsilon 1 Saturn (SA-3) (S)	Saturn I (15) (S)	Nov 16					86167.0	Suborbital launch vehicle development flight. Second Project High Water using 95 tons of water released at an altitude of 80,000 ft.
Relay I (S)	Thor-Delta (16) (S)	Dec 13	185.1	7436	1323	47.5	78.0	Test intercontinental microwave communication over 500 miles. First active repeater satellite. Initial power transmission successful.
Explorer 16 (S-35a) (S)	Scout 14 (S)	Dec 16	104.1	1159	745	52.0	100.7	Measure intercometary magnetic field and particle flux. First statistical sample; flux level found to be between estimated extremes. (WFF)
B-Chi 1

NASA Major Launch Record

1963

MISSION/ Initi Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (mins.)	CURRENT ORBITAL PARAMETERS	WEIGHT (kg)	REMARKS
				Apogee (km) Perigee (km) Incl. (deg)		(All Launches from ESMC, unless otherwise noted)
CURRENT ELEMENTS NOT MAINTAINED						
1963 Scout I (U) 1963 04A	Thor-Delta (16) (S)	Feb 14			39.0	1963 First test of a communication satellite in geosynchronous orbit. Initial communication tests successful; all contact was lost 20 seconds after command to fire apogee motor.
Scout Test (SA-4) (S)	Saturn I (S)	Mar 28		SUBORBITAL FLIGHT		Suborbital launch vehicle development test. Programmed in-flight cutoff of one of eight engines; successfully demonstrated propellant utilization system function.
Explorer 17 (SA-4) (S)	Thor-Delta (17) (S)	Apr 3		DOWN NOV 24, 1966	183.7	Measure density, composition, pressure and temperature of the Earth's atmosphere. Discovered a belt of neutral helium around the Earth.
1963 08A Telstar II (S)	Thor-Delta (18) (S)	May 7	225.3	10807 967	42.8	79.4 Communication experiments. Color and black and white television successfully transmitted to Great Britain and France.
1963 19A Mercury (MA-9) (F9-1) (S) 1963 15A	Atlas 130 (S)	May 15		LANDED MAY 16, 1963	1350.8	Fourth Orbital Manned flight with L. Gordon Cooper, Jr. Various tests and experiments were performed. Capsule reentered after 22 orbits. Mission Duration 34 hours 19 minutes 49 seconds.
RF0-1 (S)	Scout 18 (S)	May 22		SUBORBITAL FLIGHT	217.6	Suborbital reentry flight test; carried AEC Reactor mockup. Reimbursable (AEC).
Trios VII (S)	Thor-Delta (19) (S)	Jun 19	92.7	415 388	134.7	Continued meteorological satellite development. Furnished over 30,000 useful cloud cover photographs, including pictures of Hurricane Camille in the early stages in mid-October.
1963 24A CRL (USAF) (S) 1963 28A	Scout 21 (S)	Jun 28		DOWN DEC 14, 1963	99.8	Continued meteorological satellite development. Furnished over 30,000 useful cloud cover photographs, including pictures of Hurricane Camille in the early stages in mid-October. Reimbursable (AEC).
Reentry III (U)	Scout 22 (U)	Jul 20		SUBORBITAL FLIGHT		Suborbital reentry flight demonstration test of an ablation material at reentry speeds. Vehicle failed. (WFEE)
Syncom II (S)	Thor-Delta (20) (S)	Jul 26		CURRENT ELEMENTS NOT MAINTAINED	39.0	Geosynchronous communication satellite test. Voice teletype. (WFEE)
1963 31A Little Joe II Test (S)	Little Joe II #1 (S)	Aug 28		SUBORBITAL FLIGHT		Suborbital Apollo launch vehicle test. Booster qualification test with dummy payload. (White Sands)
Explorer 18 (S) (IMP-A) 1963 46A	Thor-Delta (21) (S)	Nov 27		DOWN DEC 30, 1965	62.6	First in a series of Interplanetary Monitoring Platforms to observe interplanetary space over an extended period of the solar cycle. Discovered a region of high-energy radiation beyond the Van Allen belts; observed laboratory shock wave created by the interaction of the solar wind and geomagnetic field.

NASA Major Launch Record

1963

MISSION/Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS	WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km) Perigee (km) Incl (deg)		
Centaur Test II (S) 1963 47A	Atlas-Centaur (AC-2) (S)	Nov 27	104.6	1485 488	4620.8	Launch vehicle development test. Instrumented with 2,000 pounds of sensors, equipment, and telemetry, performance and structural integrity test. Obtain long term atmospheric density data and study density changes. (VSMC)
Explorer 19 (AD-A) (S)	Scout 24 (S)	Dec 19		DOWN MAY 10, 1961	7.7	Sphere, 12 feet in diameter, was optically tracked after tracking season ended. (VSMC)
Thor VII (S) 1963 54A	Delta 22 (S)	Dec 21	98.5	711 663	58.5	Continued meteorological satellite development. Initial flight test of Automatic Picture Transmission camera system which made it possible to obtain local cloud cover pictures using independent ground stations. (VSMC)
1964						
Ranger II (S) 1964 03A	Delta 23 (S)	Jan 21	194.7	7535 1966	85.3	Modified communication satellite with a capability of TV or 300 one-way voice transmissions or 12 two-way narrowband communication. Completed more than 250 demonstrations and tests; also obtained over 600 hours of adiabatic data. (VSMC)
Echo II (S) 1964 04A	Thor-Agena B (S)	Jan 25		DOWN JUN 7, 1969	348.4	Rigidized sphere, 135 feet in diameter, to conduct passive communication experiments (radio, typepassive). Good communication with USSR. (VSMC)
Saturn I (SA-1) (S) 1964 05A	Saturn I (S)	Jan 29		DOWN APR 30, 1966	17,554.2	Launch vehicle development test. Fifth flight of Saturn; first Block II Saturn; first line flight of the LOX/LH2 fueled second stage (S-IV). 11,146 measurements taken. (VSMC)
Ranger VI (U) 1964 07A	Atlas-Agena B (S)	Jan 30		IMPACTED MOON ON FEB 2, 1964	364.7	Photograph lunar surface before hard impact. No video signals received. Impacted on west side of Sea of Tranquility, within 20 miles of target, after 65.6 hour flight. (VSMC)
Beacon Explorer A (S-69) (U)	Delta 24 (U)	Mar 19		DID NOT ACHIEVE ORBIT	54.7	Photograph lunar surface before hard impact. No video signals received. Impacted on west side of Sea of Tranquility, within 20 miles of target, after 65.6 hour flight. (VSMC)
Aeneas II (UK) (S)	Scout 25 (S)	Mar 27		DOWN NOV 18, 1967	74.8	Conduct three Earth experiments to measure galactic radio noise. Tracking experiments. Vehicle third stage malfunctioned. (VSMC)
Gemini I (S) 1964 15A	Titan II (S)	Apr 8		DOWN APR 12, 1964	3175.2	Conductation of Earth spacecraft configuration/Gemini launch vehicle behavior to launch environment through orbital insertion phase. (VSMC)
Fire I (S) 1964 18A	Miss-Arietas (S)	Apr 14		SUBORBITAL FLIGHT	1965.8	Research Test to study the heating environment encountered by a body entering the Earth's atmosphere at high speed. (VSMC)
Apollo Abort A-001 (S)	SSS (S)	May 13		SUBORBITAL FLIGHT		Vehicle development test to demonstrate Apollo spacecraft atmospheric abort system capabilities. (White Sands)

B-83

NASA Major Launch Record

1964

MISSION Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS	WEIGHT (kg)	REMARKS
				Apogee (km) Perigee (km) Incl (Deg)		(All Launches from ESMC, unless otherwise noted)
Saturn I (SA-6) (S) 1964 25A	Saturn I (SA-6) (S)	May 28		DOWN JUN 1, 1964	17844.9	Vehicle development test. First flight of unmanned model of the Apollo spacecraft. 106 measurements obtained.
Centaur Test III (S)	Atlas-Centaur (AC-3) (S)	Jun 30		SUBORBITAL FLIGHT		Launch vehicle development test; performance and guidance
SERT (S)	Scout 28 (S)	Jul 20		SUBORBITAL FLIGHT		Test of escape performance in space. Confirmed that high prevalence ion beams could be detected by a sensitive (MFP) photomicrograph lunar surface before hard impact. The first high quality photographs showing amazing detail before impacting in Sea of Clouds. Flight time 68 hours 35 minutes 55 seconds.
Ranger VII (S) 1964 41A	Atlas-Agena B 250 (S)	Jul 28		IMPACTED MOON ON JUL 31, 1964	384.7	Reentry Test. Demonstrated the ability of the Apollo spacecraft to withstand reentry conditions at 27,850 fps.
Reentry IV (S)	Scout 29 (S)	Aug 18		SUBORBITAL FLIGHT		Experimental geosynchronous communications satellite. Provided live TV coverage of the Olympic games in Tokyo and conducted various communications tests.
Syncom III (S) 1964 47A	Delta 25 (S)	Aug 19		CURRENT ELEMENTS NOT MAINTAINED	85.8	Ionosphere explorer to obtain radio soundings of upper ionosphere
Explorer 20 (S) 1964 51A	Scout 30 (S)	Aug 25	103.6	855	44.5	Improved the Orbace Standard program.
Nimbus I (S) 1964 52A	Thor-Agena B (S)	Aug 28		DOWN MAY 18, 1974	376.5	Improved the APT system to permit it to provide complete global cloud cover images. Returned more than 27,000 photographs; APT system supplied daytime photos to low-cost ground stations.
OGO (U) 1964 54A	Atlas-Agena B 195 (S)	Sep 4		CURRENT ELEMENTS NOT MAINTAINED	487.2	Standardized spacecraft capable of conducting related experiments. Carried 20 instruments to investigate geophysical and solar phenomena
Saturn I (SA-7) (S) 1964 57A	Saturn I (S)	Sep 18		DOWN SEP 22, 1964		Boom deployment anomaly obscured horizon scanner's view of Earth. Varying quality data received from all experiments.
Explorer 21 (U) 1964 60A	Delta 26 (U)	Oct 4		DOWN JAN 30, 1966		Demonstrate Launch Vehicle/spaceship compatibility and test launch escape system. Telemetry obtained from 131 separate and continuous transmissions.
RFD-2 (S)	Scout 31 (S)	Oct 9				Interplanetary Monitoring Platform to obtain magnetic fields, radiation, and solar wind data. Failed to reach intended orbit due to bad data
Explorer 22 (S) 1964 64A	Scout 32 (S)	Oct 10	104.3	872	217.6	Reentry flight carried AEC Reactor Mockup. Returned 1000 AEC photographs.
				SUBORBITAL FLIGHT	79.7	Beacon Explorer, to provide data on variations in the ionosphere's structure and relate ionospheric behavior to solar radiation. Low-cost ground stations throughout the world received unencoded radio signals. Laser tracking accomplished on October 11, 1964. (WSMC)

B-84

NASA Major Launch Record

1964

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS	WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)		
Mars II (U) 1964 73A	Atlas-Agena D 288 (U)	Nov 5		HELIOCENTRIC ORBIT	250.8	Mars II (U). Fiberglass shroud failed to jettison properly, solar panels failed to extend. Sun and Canopus not acquired. Transmissions ceased 9 hours after launch.		
Explorer 23 (S-55C) (S)	Scout 33	Nov 6		DOWN JUN 29, 1983	133.8	Provided data on meteoroid penetration and resistance of various materials to penetration.		
1964 74A Explorer 24 (S)	Scout 34	Nov 21		DOWN OCT 18, 1968	8.6	First dual payload (Air Density/Height); two satellites provided detailed information on complex radiation-ear density relationships in the upper atmosphere.		
1964 76A Explorer 25 (S)			114.6	2894	522	81.3	34.0	Second of two 1964 Mars II (U) launches. Encounter occurred on July 14, 1965, with closest approach at 6,118 miles of the planet.
1964 78B Mars II (S)	Atlas-Agena D 288 (S)	Nov 28		HELIOCENTRIC ORBIT	250.8	Transmitted 22 pictures.		
1964 77A Apollo Abort A-002 (S)	Time Joe II (S)	Dec 8		SUBORBITAL FLIGHT	42593.0	First test of Apollo emergency detection system at about altitude (White Sands).		
1964 82A Saturn I (S)	Atlas-Centaur (A-C-4) (S)	Dec 11		DOWN DEC 12, 1964	29931.0	Vehicle development flight carried mass model of Surveyor spacecraft. Protonation and stage separation test.		
1964 84A Saturn I (S)	Scout 35 (S)	Dec 15		DOWN SEP 13, 1965	115.2	Flight test of satellite to launch data on air density and spacecraft characteristics. Cooperation provided by NASA; launched by Italian (WFF).		
1964 86A Explorer 26 (S)	Delta 27 (S)	Dec 21		CURRENT ELEMENTS NOT MAINTAINED	45.8	Empire State Explorer carried live experiments to provide data on high-energy particles.		
1965 Gemini II (S)	Titan II 2 (S)	Jan 19		SUBORBITAL FLIGHT	3133.9	Demonstrate structural integrity of reentry module heat protection during maximum heating rate reentry and demonstrate variable lift on reentry module.		
1965 04A Tosco IX (S)	Delta 28 (S)	Jan 22	118.9	2564	702	96.4	138.3	First "Caravelle" configuration for Weather Bureau's Operational system. Provided increased coverage of global cloud cover with pictures of excellent quality.
1965 07A OSO B-2 (S)	Delta 29 (S)	Feb 3		DOWN AUG 9, 1969	244.9	Second in a series to measure the frequency and energy of solar electromagnetic radiation in the ultraviolet, X-ray and gamma-ray spectra of the spectrum.		
1965 09A Pegasus I (S)	Saturn I (SA-9) (S)	Feb 16		DOWN SEP 17, 1978	14311.5	Obtained first engineering data on the magnitude and direction of meteoroids in near-Earth orbit.		

B-85

1965

MISSION Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS Apogee (km) Perigee (km) Incl (deg)	WEIGHT (kg)	REMARKS
Ranger VIII (S) 1965 10A	Atlas-Agena B 196 (S)	Feb 17		IMPACTED MOON ON FEB 20, 1965	364.7	(All Launches from ESAC, unless otherwise noted) Photograph lunar surface before hard impact. Transmitted 7,137 high quality photographs before impacting in the Sea of Tranquility. Flight time 64.54 hours.
Centaur Test (U)	Atlas-Centaur A(CS) (U)	Mar 2		SUBORBITAL FLIGHT	2548.0	Vehicle development test. Atlas stage failed 4 seconds after liftoff.
Ranger IX (S) 1965 23A	Atlas-Agena B 204 (S)	Mar 21		IMPACTED MOON ON MAR 24, 1965	364.7	Photograph lunar surface before hard impact. Transmitted 5,814 excellent quality pictures. About 200 pictures relayed live via commercial TV. Flight time 64.52 hours.
Gemini III (S) 1965 24A	Titan II 3 (S)	Mar 23		LANDED MAR 23, 1965	3228.9	First manned orbital flight of the Gemini program. with astronauts Virgil I. Grissom and Michael Smith. Mission Duration 4 hrs 55 mins. Commercial three orbits. Mission Duration 4 hrs 52 mins.
Inhaleat 1 (F-1) (S) 1965 28A	Delta 30 (S)	Apr 6		CURRENT ELEMENTS NOT MAINTAINED	38.5	First operational satellite for Comsat Corp. To provide commercial service.
Explorer 27 (S) 1965 29A	Scout 36 (S)	Apr 29	107.7	1312	41.2	Trans-Atlantic communications. Reimbursable (Comsat).
Atlas Report A-002 (U)	Atlas-Joe II (U)	May 19		SUBORBITAL FLIGHT	60.8	Bescon Explorer; obtained data on Earth's gravitational field. Also carried laser tracking experiments.
Fire II (S)	Atlas-Antares 264 (S)	May 22		SUBORBITAL FLIGHT	2005.8	Demonstration of abort capability of Apollo spacecraft. Launch escape vehicle at high altitude not accomplished due to malfunction of Little Joe II booster.
Pegasus II (S) 1965 39A	Saturn I (SA-9) (S)	May 25		DOWN NOV 3, 1979	1451.5	Second reentry test to study heating environment encountered by a vehicle on reentry into the atmosphere at high speed.
Explorer 28 (S) 1965 42A	Delta 31 (S)	May 29		DOWN JUL 4, 1968	59.0	Microweather observation experiment continued lower meteoroid density than expected.
Gemini IV (S) 1965 43A	Titan II 4 (S)	Jun 3		LANDED JUN 7, 1965	3537.6	Third Interplanetary Monitoring Platform, carrying eight scientific instruments, to measure magnetic fields, cosmic rays, and solar wind beyond the Earth's magnetosphere.
Tiros X (S) 1965 51A	Delta 32 (S)	Jul 1	100.1	807	98.8	Second manned Gemini flight with James A. McDivitt and Edward H. White. During flight, White performed a 22 minute EVA using the Zero-G Integral Propulsion Unit. Mission Duration: 97 hrs 55 mins 12 secs.
Pegasus III (S) 1965 60A	Saturn I (SA-10) (S)	Jul 30		DOWN AUG 4, 1969	127.0	First U.S. Weather Bureau-funded Tiros. Obtained maximum coverage of 1965 hurricane and typhoon season.
					1451.5	Third reentry test to study heating environment. Results of Pegasus program indicated that the flux of small particles was less than expected, and the flux of medium-sized particles was about as predicted.

NASA Major Launch Record

1965

MISSION Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS Apogee (km)	PERIGEE (km)	Incl (deg)	WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
Scout Test (S)	Scout 37	Aug 10	122.2	2419	1134	69.2	20.0	Vehicle development test; Carried U.S. Army Scout geosync satellite. Penetration (OOD).
1965 63A Scout (S)	Atlas-Centaur (KC-51)	Aug 11					982.6	Vehicle development test. Carried Surveyor dynamic model. Direct ascent test for guidance evaluation.
1965 64A Gemin V (S)	Titan II S	Aug 21					3175.2	Third manned orbital flight with T. Gordon Cooper and Charles Conrad, Jr. Ejected Rendezvous Evaluation Pod (REP) for simulated rendezvous maneuvers experiment; participated in communications and other on-board experiments. Mission Duration: 190 hours 55 minutes 14.8892008s.
1965 66C OSO-C (U)	Delta 33 (U)	Aug 25					281.2	Third in a series to maintain continuity of observations during solar activity cycle. Vehicle was designed to observe Earth space phenomena on an interdisciplinary basis. Failure of primary launch vehicle guidance resulted in higher than planned orbit. Nebulae experiments returned useful data. (WSMC)
OSO II (U)	Thor-Agena D	Oct 14					507.1	Agnes target vehicle. Simultaneous countdown of the Gemini spacecraft and Atlas-Agena Target Vehicle. Telemetry was lost 375 seconds after launch of the target vehicle; Gemini launch was terminated at 1:42 minutes. (WSMC)
1965 61A Gemin VI (U)	Atlas-Agena D 6301 (U)	Oct 25						DIQ NOT ACHIEVE ORBIT
1965 69A Explorer 29 (S)	Delta 34	Nov 6	120.3	2274	1113	59.4	174.6	GEOS-4, part of U.S. Geosync Satellite Program to provide new geosync data about the Earth. (WFF)
1965 69A Explorer 30 (S)	Scout 38	Nov 18	100.4	881	664	59.7	56.7	Vehicle development test for solid emissions during final portion of OSV. Data acquired by NRL and foreign stations in 13 countries. Cooperation with NRL. (WFF)
1965 69A Explorer 31 (S)	Thor-Agena B	Nov 28	120.0	2859	501	79.8	98.9	Mater related studies of ionospheric composition and temperature variations. Provided excellent data from regions of the ionosphere never before investigated. Cooperative with Canada. (WSMC)
1965 69B Adulne II (S)	Thor-Agena B	Nov 28	118.3	2706	501	79.8	146.5	Fourth manned mission with Frank Borman and James A. Lovell, Jr. Astronauts flew part of the mission without wearing pressure suits. Mission Duration: 330 hours 35 minutes 01 seconds. (WSMC)
1965 69C GEM 39 (U)	Titan II 6	Dec 4					3629.8	Study VLF wave propagation in the presence of magnetic storms and measure electron densities. Cooperative with France. (WSMC)
1965 101A French 1A (S)	Scout 39	Dec 6	98.8	708	696	75.9	71.7	Vehicle development test. Carried U.S. Army Scout geosync satellite. Penetration (OOD).

NASA Major Launch Record

1965

MISSION/ Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS
				Apogee (km)	Perigee (km)	Incl (deg)		
Gemini VII-A (S) 1965 104A	Titan II 7 (S)	Dec 15		LANDED DEC 16, 1965			3175.2	(All Launches from ESMC, unless otherwise noted) Fifth manned mission with Walter M. Schirra, Jr. and Thomas P. Stafford. First rendezvous in space accomplished with Gemini 10 spacecraft. Mission Duration 25 hours 51 minutes 24 seconds. Operated in solar orbit to provide data on solar wind, interplanetary magnetic fields, solar physics, and high energy charged particles and magnetic fields.
1966								
Rescue VI (S) 1965 105A	Delta 35 (S)	Dec 16		HELIOCENTRIC ORBIT			63.5	
Apollo Abort A-004 (S) ESSA I (S) 1966 08A	Little Joe II (S) Delta 36 (S)	Jan 20 Feb 3	99.7 806	SUBORBITAL FLIGHT			4989.0 138.3	Apollo development flight to demonstrate launch escape vehicle performance. Last unmanned ballistic flight. (White Sands) Sun-synchronous orbit permitted satellite to view weather in each area of the globe each day, photographing a given area at the same local time every day. First Advanced Vidicon Camera System provided valuable information about weather patterns and conditions. (WSMC) Reusable (NOAA)
Reentry V (S)	Scout 42 (S)	Feb 9		SUBORBITAL FLIGHT			95.0	Test to investigate the heating environment of a body reentering Earth's atmosphere at 27,000 fps.
Apollo Saturn (AS-201) (S) ESSA II (S) 1966 16A	Saturn IB (S) Delta 37 (S)	Feb 26 Feb 28	113.4 1412	SUBORBITAL FLIGHT			20820.1	Launch vehicle development flight; carried unmanned Apollo spacecraft
Gemini VIII (U) 1966 20A GATV (S) 1966 19A	Titan II 8 (S) Atlas-Agena D 5302 (S)	Mar 16 Mar 16		LANDED MAR 17, 1966 DOWN SEP 15, 1967			3788.0	Provided direct readout of cloud cover photos to local users. Along with ESSA I, completed the initial global weather satellite system. (WSMC) Agena Target Vehicle launched from Complex 14 and mated Gemini 10. First rendezvous in space. Astronauts Neil A. Armstrong and David R. Scott accomplished 28 orbits and docking. Altitude and maneuver thruster malfunction caused Agena to tumble. Astronauts separated the vehicles and terminated the mission. EVA was not accomplished. First Pacific Ocean landing. Mission Duration 10 hours 41 minutes 26 seconds.
Centaur Test (U) 1966 30A OAGI (U) 1966 31A Nimbus II (S) 1966 40A	Atlas-Centaur (AC-8) (U) Atlas-Agena D 5002C (S) Thor-Agena D D 5303 (S)	Apr 8 Apr 8 May 14	793 783 1174	DOWN MAY 5, 1966			784.7 1789.0 413.7	Centaur vehicle development flight; carried Surveyor model Second Launch vehicle development flight. Carried four experiments to study UV, X-ray and gamma-ray regions. Primary battery malfunctioned. Provided global weather photography on 24-hour basis for meteorological research and operational use. (WSMC)

NASA Major Launch Record

1966

MISSION/ Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (mins)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km)	Perigee (km)	Incl (deg)		
Gemini IX (U)	Atlas-Agena D	May 17		DID NOT ACHIEVE ORBIT			3252.0	Target vehicle for Gemini IX, vehicle failure caused by a short in the
Explorer 32 (S)	Delta 3B	May 25		DOWN FEB 22, 1965			224.5	Setback caused by engine failure. Carried 8 experiments to measure temperatures, composition, density and pressures in the upper atmosphere.
Surveyor I (S)	Atlas-Centaur (A-C-10) (S)	May 30		LANDED ON MOON JUN 2, 1966			965.2	Engineered soft lunar landing in Ocean of Storms. Performed engineering tests and transmitted photography. Landing pads generated the lunar surface to a maximum depth of 1 inch.
Gemini IXA (U)	Titan II 9	Jun 3		LANDED JUN 6, 1966			3705.3	Seventh manned mission with Thomas P. Stafford and Eugene A. Cernan. Target vehicle should have separated, docking was not achieved. EVA was successful, but evaluation of AMU was not achieved. Mission Duration 72 hours 20 minutes 50 seconds.
1966 47A GATV (U)	Atlas-Agena D	Jun 1		DOWN JUN 11, 1966				Carried 21 experiments to obtain correlated data on geophysical and solar phenomena in the Earth's atmosphere. First 19-day stabilization in Earth orbit.
1966 46A OSO III (S)	ESRO4 (S)	Jun 7		CURRENT ELEMENTS NOT MAINTAINED			514.8	First 19-day stabilization in Earth orbit.
1966 49A	Atlas-Agena B	Jun 7		DOWN JUN 11, 1966			5601 (S)	First 19-day stabilization in Earth orbit.
OV-3 (S)	Scout 46 (S)	Jun 9	142.9	4703	64.5	40.8	1733.0	Radiation research satellite for the USAF. Reimbursable (DOO). (WFFL)
1966 52A Pegasus I (S)	Thor-Agena D	Jun 23	177.0	5599	2553	84.5	56.7	Sphere, 100 feet in diameter, to determine the location of continents, land masses, and other geographic points using a world-wide triangulation network of stations. (WMSMC)
1966 56A	Delta 3B	Jul 1		CURRENT ELEMENTS NOT MAINTAINED			93.4	Interplanetary Monitoring Platform to study, at lunar distance, the Earth's magnetosphere and magnetic tail. Planned anchored lunar orbit was not achieved. Useful data obtained from Earth orbit.
1966 58A Explorer 33 (S)	Delta 3B	Jul 1		CURRENT ELEMENTS NOT MAINTAINED			93.4	Interplanetary Monitoring Platform to study, at lunar distance, the Earth's magnetosphere and magnetic tail. Planned anchored lunar orbit was not achieved. Useful data obtained from Earth orbit.
Apollo Saturn AS 203 (S)	Saturn IB (S)	Jul 5		DOWN JUL 5, 1966			2535.4	Lunar vehicle development flight to evaluate the S-1V9 stage vent and restart capability.
1966 59A Gemini X (S)	Titan II 10 (S)	Jul 18		LANDED JUL 21, 1966			3762.6	Eighth manned mission with John W. Young and Michael Collins. Performed first docked vehicle maneuvers; standup EVA of 89 minutes; umbilical EVA of 27 minutes. Mission duration 70 hours 46 minutes 39 seconds.
1966 60A GATV (S)	Atlas-Agena D	Jul 18		DOWN DEC 29, 1966				Photograph landing sites for Apollo and Surveyor missions from lunar orbit. Photographed over 2 million square miles of the Moon's surface; took the first two photos of the Earth from the distance of the Moon. Demonstrated maneuverability in lunar orbit.
1966 62A Atlas 2	Atlas-Agena D	Aug 10		DOWN OCT 28, 1966			385.6	Photograph landing sites for Apollo and Surveyor missions from lunar orbit. Photographed over 2 million square miles of the Moon's surface; took the first two photos of the Earth from the distance of the Moon. Demonstrated maneuverability in lunar orbit.
1966 72A	Atlas-Agena D	Aug 10		DOWN OCT 28, 1966			385.6	Photograph landing sites for Apollo and Surveyor missions from lunar orbit. Photographed over 2 million square miles of the Moon's surface; took the first two photos of the Earth from the distance of the Moon. Demonstrated maneuverability in lunar orbit.

NASA Major Launch Record

1966

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS		WEIGHT (kg)	REMARKS	
				Apogee (km)	Perigee (km)			Incl (deg)
Pioneer VII (S) 1966 75A	Delta 40 (S)	Aug 17				63.0	(All Launches from ESMC, unless otherwise noted) Second in a series of interplanetary probes to provide data on solar wind, magnetic fields, and cosmic rays.	
Apollo Saturn CS-202 (S) 1966 81A	Saturn IB (S)	Aug 25				25909.7	Apollo launch vehicle/Spacecraft development flight to test Command Module heat shield and obtain launch vehicle and spacecraft data.	
1966 81A	Titan II 11 (S)	Sep 12				3798.4	Ninth manned mission with Charles Conrad, Jr. and Richard F. Gordon, Jr. Rendezvous and docking achieved. Umbilical and standup EVA performed and as well as tethered spacecraft experiment. Mission duration 71 hours 17 minutes 8 seconds.	
1966 80A	Atlas-Agena D 5306 (S)	Sep 12					Second soft lunar landing planned. One vernier engine did not fire for midcourse correction, sending the spacecraft into a tumbling mode.	
1966 84A	Atlas-Centaur (AC-7) (S)	Sep 20				1000.2	Second in a series of flights in the Orion Operational Satellite (TOS) system.	
ESSA III (S) 1966 87A	Delta 41 (S)	Oct 2	114.5	1483	1384	147.4	Successful launch of the world's first weather pattern-recorder. Provided valuable information about the world's weather patterns.	
Centaur Test Aurora (S) 1966 85	Atlas-Centaur (AC-9) (S)	Oct 26				952.6	Launch vehicle development flight. Surveyor module injected into simulated lunar transfer orbit. Demonstrated two-burn parking orbit operational capability.	
1966 96A	Delta 42 (S)	Oct 26	717.7	37229	3123	16.9	Comsat commercial communications satellite. Apogee monitor malfunction resulted in elliptical orbit. Reburnable (Comsat).	
Lunar Orbiter 2 (S) 1966 100A	Atlas-Agena D 5802 (S)	Nov 6				87.1	Photographed lunar landing sites from lunar orbit, provided new data on lunar gravitational field; photographed Ranger VIII landing point and Apollo 11 landing site.	
Gemini XII (S) 1966 104A	Titan II 12 (S)	Nov 11				3762.1	Final Gemini mission. First rendezvous and German flight with James A. Lovell, Jr. and Edward S. White II. First rendezvous and long duration. Two EVAs performed. Mission duration 84 hours 34 minutes 31 seconds.	
1966 103A	Atlas-Agena D 5307 (S)	Nov 11					Perform various communication, meteorology, and control technology experiments and carry out scientific measurements of orbital environment. Experiments results outstanding. Spin-scan cloud camera photographed changing weather patterns; air-to-ground and air-to-air communications demonstrated for the first time.	
1966 110A	Atlas-Agena D 5101 (S)	Dec 7	1436.0	35817	35750	14.3	700.1	Carried biological specimens to determine the effects of the space environment on life processes. Reentry vehicle separated but rocket failed, leaving the capsule in orbit. No useful scientific data obtained.
Biosatellite I (U) 1966 114A	Delta 43 (S)	Dec 14				428.4		

B-90

NASA Major Launch Record

1967

MISSION/ Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS Apogee (km)	Perigee (km)	Incl (Deg)	WEIGHT (kg)	REMARKS (All Launches from ESIMC, unless otherwise noted)
1967 Inital I F-2 (S)	Delta 44 (S)	Jan 11		CURRENT ELEMENTS NOT MAINTAINED			87.1	Comsat commercial communication satellite. Reached intended orbit.
1967 01A								Isobellon on ESIMC 1430. Launch vehicle (Comsat).
ESSA IV (S)	Delta 45 (S)	Jan 26	113.4	1437		102.0	131.5	Replaced ESSA IV in orbit. Provided daily coverage of local weather photos to APT receivers. Shuttle malfunction rendered one camera inoperative. Flensburgable (NOAA). (WSMCC)
1967 06A								
Lunar Orbiter 3 (S)	Atlas-Agena D 5803(S)	Feb 5		DOWN OCT 9, 1967			395.6	Photographed lunar landing sites from lunar orbit; also returned 600,000 sq. m. of film and 250,000 sq. m. of back side lunar photography; provided gravitational field and lunar environment data.
OSO III (S)	Delta 46 (S)	Mar 8		DOWN APR 4, 1962			294.4	Carried 9 experiments to study structure, dynamics and chemical composition of the outer solar atmosphere through X-ray, visible, and UV radiation measurements.
1967 20A								
Inital II F-3 (S)	Delta 47 (S)	Mar 22		CURRENT ELEMENTS NOT MAINTAINED			87.1	Comsat commercial communication satellite. Completed Inital II system. Rebuilt and reactivated. Carried microwave test of a ground-based tracking system, carried microwave communications, meteorological cameras, and eight scientific experiments. Second stage failed to restart, resulting in an elliptical orbit. Limited data obtained.
1967 26A	Atlas-Agena D 5102 (U)	Apr 6		DOWN SEP 2, 1969			324.3	
ATS II (U)								
1967 31A								
Surveyor III (S)	Atlas-Centaur (A-C-12) (S)	Apr 17		LANDED ON MOON APR 20, 1967			1095.6	Vernier engines failed to cut off as planned; spacecraft bounced twice before landing. Surface sampler was used for pressing, digging, trenching, scooping, and depositing surface material in view of the camera. Returned over 6,300 photographs, including pictures of the Earth during lunar eclipse.
1967 35A								
ESSA V (S)	Delta 48 (S)	Apr 20	113.5	1419		102.0	147.4	Replaced ESSA IV in TOCS system. Furnished daily global coverage of weather photos to APT receivers. Flensburgable (NOAA). (WSMCC)
1967 36A								
San Marco II (S)	Scout 52 (S)	Apr 26		DOWN OCT 14, 1967			129.3	First European launch attempt from a mobile sea-based platform in the Indian Ocean; launched conducted by Italian crew. Provided continuous equatorial air density measurements. Cooperative with Italy. (SM)
1967 38A								
Lunar Orbiter IV (S)	Atlas-Agena D 5804 (S)	May 4		DOWN OCT 6, 1967			395.6	Lunar orbit achieved. Photographed 99% of the Moon's front side and additional back side areas.
1967 41A	Scout 53 (S)	May 5		DOWN DEC 14, 1970			102.5	First UK-built satellite to extend atmospheric and ionospheric investigations. Cooperative with UK. (WSMCC)
1967 42A (S)	Delta 49 (S)	May 24		DOWN MAY 3, 1969			73.9	Film in Interplanetary Monitoring Platform series to study Sun-Earth relationships. Elliptical orbit achieved. Useful data returned. (WSMCC)
1967 51A								

B-91

NASA Major Launch Record

1967

MISSION/ Intl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS		WEIGHT (kg)	REMARKS
				Apogee (km)	Perigee (km) Incl (deg)		
ESRO II A (U)	Scout 55 (U)	May 29		DID NOT ACHIEVE ORBIT		89.1	(All Launches from ESMC, unless otherwise noted) Cameo 7 experiments to study solar and cosmic radiation. Third stage detached during cooperative with LESRO. (WSMC)
Martner V (S)	Atlas-Agena D	Jun 14		HELIOCENTRIC ORBIT		244.9	Validated data on planet's atmosphere, radiation, and magnetic field. (WSMC)
1967 60A	5401 (S)						
Surveyor IV (U)	Atlas-Centaur	Jul 14		IMPACTED MOON ON JUL 17, 1967		1037.4	Lunar soft landing mission. All systems were normal until 2 seconds before retro rocket burnout (2-1/2 minutes before touchdown) when the signal was abruptly lost.
1967 68A	(AC-11) (S)						
Explorer 35 (S)	Delta 50	Jul 19		SELENOCENTRIC ORBIT		104.4	Interplanetary Monitoring Platform to study solar wind and interplanetary fields at lunar distances. Lunar orbit achieved. Results indicated no shock front precedes the Moon; no magnetic field, no radiation belts or evidence of lunar ionosphere.
1967 70A	(S)						
OGO IV (S)	Thor-Agena D	Jul 28		DOWN AUG 16, 1972		551.6	Study relationship between Sun and Earth's environment. Near-polar orbit achieved. 3-axis stabilized. (WSMC)
1967 73A	(S)						
Lunar Orbiter V (S)	Atlas-Agena D	Aug 1		DOWN JAN 31, 1968		385.6	First mission to photograph potential landing sites from lunar orbit. Increased resolution. (WSMC)
1967 75A	5805 (S)						
Biosatellite II (S)	Delta 51	Sep 7		DOWN SEP 9, 1967		425.4	Carried 13 experiments to investigate biological effects in low Earth orbit. Reentry initiated 17 orbits early because of communications difficulties and storm in recovery area. Air recovery successful.
1967 88A	(S)						
Surveyor V (S)	Atlas-Centaur	Sep 8		LANDED ON MOON SEP 11, 1967		1006.1	Lunar soft landing accomplished; returned TV photos of lunar surface and data on chemical characteristics of lunar soil.
1967 94A	Delta 31 (S)						
Intersat II (S)	Delta 32	Sep 28		CURRENT ELEMENTS NOT MAINTAINED		87.1	Comsat commercial communications satellite to provide 24-hour transpacific service. Reimbursable (Comsat).
1967 84A	(S)						
OSO-IV (S)	Delta 53	Oct 18		DOWN JAN 15, 1982		276.7	Continuation of OSO program to better understand the Sun's structure and determine the solar influence upon the Earth. Obtained first pictures inside of the Sun in extreme ultraviolet.
1967 100A	(S)						
RAM C-1 (S)	Scout 57 (S)	Oct 19		SUBORBITAL FLIGHT		116.6	Research to investigate communications problems experienced during reentry. (WFF)
1967 111A	(S)						
ATS III (S)	Atlas-Agena D	Nov 5	1436.1	35844	14.2	714.0	Further development of experiments and concepts in useful applications of space technology to communications, meteorology, navigation, and Earth resources management.
1967 111A	5100 (S)						
Surveyor VI (S)	Atlas-Centaur	Nov 7		LANDED ON MOON NOV 10, 1967		1008.3	Lunar soft landing achieved; pictures and soil analysis data transmitted. Vernier engines restarted; lifting spacecraft 10 feet from the surface and landing 8 feet from the original landing site, performing the first rocket- powered takeoff from the lunar surface.
1967 112A	(AC-15) (S)

MISSION/ Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS	WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)			
Apollo 4 (S)	Saturn V	Nov 9		DOWN NOV 9, 1967	45306.0	Lunar vehicle/spacescraft development flight. First launch of the Saturn V. Carried Apollo Command/Service Module.			
1967 113A	AS-501 (S)	Nov 10	114.8	1482	1407	102.2	1937.7	Rehearsal of Apollo 4. Carried Agena D and Agena Target Vehicle (ATV). (WSMC)	
ESNA VI (S)	Delta 54	Nov 10						Rehearsal of ESNA VI and ESNA IV in the TOS system; used in central analysis of global weather. Remotely piloted (NOAA). (WSMC)	
1967 114A	Delta 55	Dec 13						Third in a series of interplanetary probes to provide data on the solar wind, magnetic fields, and cosmic rays. Carried TETRA-1, the first NASA piggyback payload. (WSMC)	
Pioneer VIII (S)	Delta 55	Dec 13						Third in a series of interplanetary probes to provide data on the solar wind, magnetic fields, and cosmic rays. Carried TETRA-1, the first NASA piggyback payload. (WSMC)	
1967 123A	Delta 55	Dec 13						Third in a series of interplanetary probes to provide data on the solar wind, magnetic fields, and cosmic rays. Carried TETRA-1, the first NASA piggyback payload. (WSMC)	
TETRA-1 (S)	Delta 55	Dec 13						Third in a series of interplanetary probes to provide data on the solar wind, magnetic fields, and cosmic rays. Carried TETRA-1, the first NASA piggyback payload. (WSMC)	
1967 123B	Delta 55	Dec 13						Third in a series of interplanetary probes to provide data on the solar wind, magnetic fields, and cosmic rays. Carried TETRA-1, the first NASA piggyback payload. (WSMC)	
1968									
Surveyor VII (S)	Atlas-Centaur	Jan 7						1040.1	Lunar soft landing achieved; provided pictures of lunar terrain, portions of spacescraft, experiment operations, stars, planets, crescent Earth as it changed phases, and first observation of artificial light from the Earth. GEOS spacescraft to provide precise navigation for Surveyor VII and other spacecraft. Carried the Lunar Module, Lunar Surface Experiment Package, and the Lunar Surface Descent Stage. (WSMC)
1968 01A	Atlas-Centaur	Jan 7						1040.1	Lunar soft landing achieved; provided pictures of lunar terrain, portions of spacescraft, experiment operations, stars, planets, crescent Earth as it changed phases, and first observation of artificial light from the Earth. GEOS spacescraft to provide precise navigation for Surveyor VII and other spacecraft. Carried the Lunar Module, Lunar Surface Experiment Package, and the Lunar Surface Descent Stage. (WSMC)
Explorer 36 (S)	Delta 56	Jan 11	112.2	1572	1079	105.8	212.3	Part of the Surveyor VII development program. Carried the Lunar Surface Experiment Package and the Lunar Surface Descent Stage. (WSMC)	
1968 02A	Delta 56	Jan 11	112.2	1572	1079	105.8	212.3	Part of the Surveyor VII development program. Carried the Lunar Surface Experiment Package and the Lunar Surface Descent Stage. (WSMC)	
Apollo 5 (S)	Saturn IB	Jan 22						42,505.0	Provided measurements of energy characteristics in the Earth's radiation belts; first evidence of electric fields in the bow shock. (WSMC)
1968 07A	AS-204 (S)	Mar 4						611.0	Provided measurements of energy characteristics in the Earth's radiation belts; first evidence of electric fields in the bow shock. (WSMC)
OCO D (S)	Atlas-Agena D	Mar 4						611.0	Provided measurements of energy characteristics in the Earth's radiation belts; first evidence of electric fields in the bow shock. (WSMC)
1968 14A	5020A (S)	Mar 5						89.8	Solar Explorer to provide data on selected solar X-ray and ultraviolet emissions. Cooperative with NRL. (WFF)
Explorer 37 (S)	Scout 60	Mar 5						89.8	Solar Explorer to provide data on selected solar X-ray and ultraviolet emissions. Cooperative with NRL. (WFF)
1968 17A	Scout 60	Mar 5						89.8	Solar Explorer to provide data on selected solar X-ray and ultraviolet emissions. Cooperative with NRL. (WFF)
Apollo 8 (U)	Saturn V	Apr 4						42856.0	Lunar vehicle and spacescraft development flight. Launch vehicle engine malfunctioned; spacescraft systems performed normally. (WSMC)
1968 23A	AS-402 (U)	Apr 4						42856.0	Lunar vehicle and spacescraft development flight. Launch vehicle engine malfunctioned; spacescraft systems performed normally. (WSMC)
1968 23B	AS-402 (U)	Apr 4						42856.0	Lunar vehicle and spacescraft development flight. Launch vehicle engine malfunctioned; spacescraft systems performed normally. (WSMC)
Henry VI (S)	Scout 61 (S)	Apr 27						272.0	Turbulent heating experiment to obtain heat transfer measurements at Mach 25. Carried a radio altimeter to study solar and cosmic radiation in the Earth's radiation belts. (WFF)
ESRO IIB (S)	Scout 62 (S)	May 17						89.1	Carried a radio altimeter to study solar and cosmic radiation in the Earth's radiation belts. (WFF)
1968 41A	Thor-Agena D	May 18						571.5	Experimental meteorological satellite; also carried Scout 10 (DOD) as a secondary payload. Cooperative with ESRO. (WSMC)
Nimbus B (U)	Thor-Agena D	May 18						571.5	Experimental meteorological satellite; also carried Scout 10 (DOD) as a secondary payload. Cooperative with ESRO. (WSMC)
Scout 10 (U)	Thor-Agena D	May 18						571.5	Experimental meteorological satellite; also carried Scout 10 (DOD) as a secondary payload. Cooperative with ESRO. (WSMC)
Explorer 38 (S)	Delta 57 (S)	Jul 4	224.2	5869	5825	120.8	275.4	Radio Astronomy Explorer to monitor low-frequency radio signals originating in our own solar system and the Earth's magnetosphere and radiation belts. (WSMC)	
1968 55A	Delta 57 (S)	Jul 4	224.2	5869	5825	120.8	275.4	Radio Astronomy Explorer to monitor low-frequency radio signals originating in our own solar system and the Earth's magnetosphere and radiation belts. (WSMC)

NASA Major Launch Record

1968

MISSION/ Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS		WEIGHT (kg)	REMARKS
				Apogee (km)	Perigee (km)		
Explorer 33 (S) 1968 66A	Scout 63 (S)	Aug 8	117.9	2464	677	80.7	(All Launches from ESMC, unless otherwise noted) Dual payload (Air Density/Injun Explorers) to continue the detailed scientific study of the density and radiation characteristics of the Earth's upper atmosphere. (WSMC)
Explorer 40 (S) 1968 66B	Scout 63 (S)	Aug 8	117.9	2464	677	80.7	
ATS IV (U) 1968 66A	Atlas-Centaur (AC-17) (U)	Aug 10					DOWN OCT 17, 1968
ESSA VII (S) 1968 68A	Delta 58 (S)	Aug 16	114.9	1471	1428	101.4	Evaluate gravity-gradient stabilization, simultaneous transmission of voice, TV, telegraph, and digital data. Critical path engine for second burn; spacecraft remained in parking orbit after launch.
RAM CII (S) 1968 68A	Scout 64 (S)	Aug 22					Replaced ESSA V as the primary stored data satellite in the TOS system. Reimbursable (NOAA). (WSMC)
Inhelsat III F.1 (U)	Delta 58 (U)	Sep 16					Measure electron and ion concentrations during reentry. (WIFF) Reimbursable (Comsat).
ESRO IA (S) 1968 84A	Scout 65 (S)	Oct 3					Carried eight experiments to measure energies and pitch angles of particles impinging on the polar ionosphere during magnetic storms and solar flares. (WSMC)
Apollo 7 (S) 1968 89A	Saturn IB AS-205 (S)	Oct 11					First manned flight of Saturn IB spacecraft, with Walter M. Schirra, Jr., Donn F. Eisele, and Walter Cunningham. Performance excellent. (WSMC)
Pioneer IX (S) 1968 109A	Delta 80 (S)	Nov 8					Deep space probe to collect scientific data on the electromagnetic and plasma properties of interplanetary space. Carried TEITR 2 as a secondary payload.
TEITR 2 (S) 1968 100B	Delta 61 (S)	Dec 5					Study interplanetary magnetic fields and solar cosmic ray particles. Reimbursable (ESA).
HEOS A (S) 1968 109A	Delta 61 (S)	Dec 5					Study interplanetary magnetic fields and solar cosmic ray particles. Reimbursable (ESA).
OAO II (S) 1968 110A	Atlas-Centaur (AC-16) (S)	Dec 7	99.9	759	750	35.0	Photometry investigations of celestial objects in the ultraviolet region of the electromagnetic spectrum.
ESSA VIII (S) 1968 114A	Delta 62 (S)	Dec 15	114.6	1461	1411	101.8	Metereological satellite for ESSA. Reimbursable (NOAA). (WFF)
ESSA IX (S) 1968 114A	Delta 62 (S)	Dec 15	114.6	1461	1411	101.8	Metereological satellite for ESSA. Reimbursable (NOAA). (WFF)
Apollo 8 (S) 1968 118A	Saturn V AS-504 (S)	Dec 18					Initial increment of first global commercial communications satellite system for Comsat. Reimbursable (Comsat).
Apollo 9 (S) 1968 118A	Saturn V AS-504 (S)	Dec 21					First manned Saturn V flight with Frank Borman, James A. Lovell, Jr., and William A. Anders. First manned lunar orbit mission; provided a close-up look at the Moon during 10 lunar orbits. Mission Duration 147 hours 0 minutes 42 seconds.

B-94

NASA Major Launch Record

1969

MISSION Int'l Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS		WEIGHT (kg)	REMARKS		
				Apogee (km)	Perigee (km)			Incl (deg)	
Apollo 11 (S) 1969 58A	Saturn V SA-506 (S)	Jul 16				51655.0	(All Launches from ESAC; unless otherwise noted) First manned lunar landing and return to Earth with Neil A. Armstrong, Michael Collins, and Edwin A. Aldrin. Landed in the Sea of Tranquility on July 20; deployed TV camera and EASEP experiments on the lunar surface. EVA performed. EVA returned lunar soil samples. Mission duration 195 hours 18 minutes 35 seconds.		
Intellert III F-5 (U) 1969 64A	Delta 71 (S)	Jul 26				146.1	Fourth increment of Comsat's international commercial communication satellite system. Third stage malfunctioned; satellite did not achieve desired orbit. Reimbursable (Comsat).		
OSO V (S) 1969 68A PAC (S) 1969 68B	Delta 72 (S)	Aug 9				173.7	Continuing study of Sun's X-rays, gamma rays, and radio emissions. Carried PAC experiment to stabilize spent Delta stage.		
ATS V (U) 1969 69A	Atlas-Centaur (AC-18) (S)	Aug 12	1447.5		35996	13.9	432.7	Evaluate gravity-gradient stabilization for geosynchronous satellites. Anomaly after apogee motor firing resulted in counterclockwise spin; gravity-gradient booms could not be deployed. Nine of 13 experiments returned useful data.	
Pioneer E (U) (TETR C) (U)	Delta 73 (U)	Aug 27					67.1	Deep space probe to study magnetic disturbances in interplanetary space. Vehicle malfunctioned; destroyed 8 minutes 3 seconds into powered flight by Range Safety Officer.	
ESRO 1B (S) 1969 83A	Scout 66 (S)	Oct 1					85.9	Fourth European-designed and built satellite to study ionospheric and auroral phenomena over the northern polar regions. Reimbursable (ESA).	
GRS-A (S) 1969 97A	Scout 67 (S)	Nov 7	110.8		2155	371	102.8	72.1	Study the inner Van Allen belt and auroral zones of the Northern Hemisphere. Cooperation with Germany. (MSMC)
Apollo 12 (S) 1969 99A	Saturn V SA-507 (S)	Nov 14					51655.0	Second Manned lunar landing and return with Charles Conrad, Jr., Richard F. Gordon, and Alan F. Bean. Landed in the Ocean of Storms on November 19, 1969; deployed TV camera and ALSEP experiments. Two EVAs performed; collected core sample and lunar materials; photographed and retrieved parts from Surveyor III spacecraft. Mission duration 244 hours 36 minutes 24 seconds.	
Skynet A (S) 1969 101A	Delta 74 (S)	Nov 21					242.7	Communication satellite for the United Kingdom. Reimbursable (UK).

MISSION Int'l Design	LAUNCH VEHICLE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS		WEIGHT (kg)	REMARKS
			Apogee (km)	Perigee (km) Incl (Deg)		
1970.06A TOS A (S)	Delta 81 (S)	Dec 11 144.8	1421	101.5	306.2	(All Launches from ESIMC, unless otherwise noted) To augment NOAA's satellite world-wide weather observation capabilities. Reimbursable (NOAA). (WSMC)
1970.107A Explorer 42 (S)	Scout 71 (S)	Dec 12	DOWN APR 5, 1979		142.0	Small Astronomy Satellite to catalog celestial X-ray sources within and outside the Milky Way. First X-ray satellite. (San Marco) 1971
1971 Intelsat IV F-2 (S)	Atlas-Centaur (AC-25) (S)	Jan 25	ELEMENTS NOT AVAILABLE		1387.1	Fourth generation satellite to provide increased capacity for Comsat's 3668 commercial communications network. Reimbursable (Comsat). (San Marco) 1971
1971.06A Apollo 14 (S)	Saturn V	Jan 31	LANDED FEB 8, 1971		51655.0	Third manned lunar landing with Alan B. Shepard, Jr., Stuart A. Roosa, and Edgar D. Mitchell. Landed in the Fra Mauro area on February 5, 1971; performed EVA, deployed lunar experiments, returned lunar samples. Mission duration 216 hours 1 minute 58 seconds.
1971.08A NATOSAT 2 (S)	Delta 82 (S)	Feb 2 1436.1	35744	13.7	242.7	Second communications satellite for NATO. Reimbursable (NATO)
1971.08A Explorer 43 (S)	Delta 83 (S)	Mar 13	DOWN OCT 2, 1974		288.0	Second generation Interplanetary Monitoring Platform to extend man's knowledge of solar-lunar relationships.
1971.08A ISIS B (S)	Delta 84 (S)	Mar 31 1133.5	1421	8.2	264.0	Study electron production and loss and large scale transport of ionization in the ionosphere. Cooperative with Canada. (WSMC)
1971.24A San Marco C (S)	Scout 72 (S)	Apr 24	DOWN NOV 29, 1971		163.3	Study atmosphere drag, density, neutral composition, and temperature. Cooperative with Italy. (SM)
1971.36A Mariner H (U)	Atlas-Centaur (AC-24) (U)	May 8	DID NOT ACHIEVE ORBIT		967.9	Mariner Mars 71 Orbiter mission to map the Martian surface. Centaur stage malfunctioned shortly after launch. (SM)
1971.051A Mariner J (S)	Atlas-Centaur (AC-23) (U)	May 30	AEROCENTRIC ORBIT		967.9	Second Mariner Mars 71 Orbiter mission to map the Martian surface. Achieved orbit around Mars on November 13, 1971. Transmitted 6,876 pictures. (SM)
1971.051A PAET (S)	Scout 73 (S)	Jun 20	SUBORBITAL FLIGHT		62.1	Test to determine the structure and composition of an atmosphere from a probe entering at high speed.
1971.06A Explorer 44 (S)	Scout 74 (S)	Jul 8	DOWN DEC 15, 1978		115.0	Solar radiation spectrometer to monitor the Sun's X-ray and ultraviolet emissions. Cooperative with NRL. (WFF)
1971.06A Apollo 15 (S)	Saturn V	Jul 26	LANDED AUG 7, 1971		51655.0	Fourth manned lunar landing with David R. Scott, Alfred M. Worden, and James B. Irwin. Landed at Hadley Rille on July 30, 1971; performed EVA with Lunar Roving Vehicle; deployed experiments. PAF Subsatellite being launched from SM in lunar orbit. Mission duration 285 hours 11 minutes 58 seconds.
1971.06D P&F Subsat (S)	SM	Aug 4	IMPACTED MOON JUL 30, 1971		38.3	PAF Subsatellite being launched from SM in lunar orbit. Mission duration 285 hours 11 minutes 58 seconds.

1971 80A	(S)				20.4	Cooperative with Germany
ETM4 (S)	Delta 86 (U)	Oct 21		DOWN JUL 21, 1972	31.7	To augment NOAA's satellite world-wide weather observation capabilities. Second stage labeled Reinburzshale (NOAA). (W/MC)
1971 83B	(U)					Small Scientific Satellite to study magnetic storms and acceleration of charged particles within the inner magnetosphere. (San Marco)
TOS B (U)	Scout 77 (S)	Nov 15		DOWN JAN 10, 1992	50.0	Study the interactions between plasma and charged particle streams in the atmosphere. Cooperative with UK. (W/MC)
1971 91A	(S)				102.4	Fourth generation satellite to provide increased capacity for Comsat's global commercial communications network. Reinburzshale (Comsat). (W/MC)
Explorer 45 (S)	Scout 78 (S)	Dec 11		DOWN DEC 12, 1978	1387.1	Fourth generation satellite to provide increased capacity for Comsat's global commercial communications network. Reinburzshale (Comsat). (W/MC)
1971 88A	(S)					
UK-4 (S)	Atlas-Centaur (S)	Dec 20	1445.5	38013 35828 10.3	1387.1	Fourth generation satellite to provide increased capacity for Comsat's global commercial communications network. Reinburzshale (Comsat). (W/MC)
1971 109A	(S)					
1971 116A	(AC-28) (S)					
1972						
1972 03A	Atlas-Centaur (S)	Jan 22	1442.4	35921 35996 9.7	1387.1	Fourth generation satellite to provide increased capacity for Comsat's global commercial communications network. Reinburzshale (Comsat). (W/MC)
HEOS A-2 (S)	(AC-28) (S)	Jan 31		DOWN AUG 2, 1974	117.0	Fourth generation satellite to provide increased capacity for Comsat's global commercial communications network. Reinburzshale (Comsat). (W/MC)
1972 05A	(S)					organizations to investigate particles and micrometeorites in space. Reinburzshale (ESA). (W/MC)
Pioneer 10 (S)	Atlas-Centaur (S)	Mar 2		SOLAR SYSTEM ESCAPE TRAJECTORY	258.0	Jupiter flyby. First spacecraft to flyby Jupiter and return scientific data.
1972 12A	(AC-27) (S)	Mar 11		DOWN JAN 9, 1980	470.8	Western European satellite to obtain data on high-energy emissions from stellar and galactic sources. Reinburzshale (ESA). (W/MC)
TD-1 (S)	Delta 88 (S)	Apr 16		LANDED APR 27, 1972	5655.0	Fifth manned lunar landing mission with John W. Young, Kaz 1 (W/MC) and Charles M. Duke. Landed at Oceanus on Apr 20, 1972. Deployed camera and experiments, performed lunar surface geology and photography. Sent 3500 photographs and 11000 TV pictures to Earth. Mission Duration 285 hours 51 minutes 53 seconds.
1972 14A	Scout V (S)	Apr 16		IMPACTED MOON MAY 29, 1972	36.3	Deployed first 3500 photographs and 11000 TV pictures to Earth. Mission Duration 285 hours 51 minutes 53 seconds.
1972 15A	SA-511 (S)	Apr 16				Third generation satellite to provide increased capacity for Comsat's global commercial communications network. Reinburzshale (Comsat). (W/MC)
1972 31D	SM					
Theosal IV F-6 (S)	Atlas-Centaur (S)	Jun 13	1438.6	35858 35871 10.7	1387.1	Fourth generation satellite to provide increased capacity for Comsat's global commercial communications network. Reinburzshale (Comsat). (W/MC)

B-99

NASA Major Launch Record

1972

MISSION/ Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS
				Apogee (km)	Perigee (km)	Incl (deg)		
1972 59A	Delta 89 (S)	Jul 23	103.0	906	896	89.3	941.0	(All Launches from ESMC, unless otherwise noted)
Explorer 46 (S)	Scout 79 (S)	Aug 13		DOWN NOV 2, 1979			206.4	Demonstrate remote sensing technology of the Earth's surface on a global scale and on a repetitive basis. (WSM/C)
OSG 3 (S)	Atlas-Centaur (AC-23) (S)	Aug 21	99.2	725	713	35.0	2200.0	Meteoroid Technology Satellite to measure meteoroid penetration rates and velocity. (WFF)
1972 85A	Scout 80 (S)	Sep 2	89.9	796	707	90.0	94.0	Study interstellar absorption of common elements in the interstellar gas, and investigate ultraviolet radiation emitted from young hot stars.
1972 89A	Scout 80 (S)	Sep 22						Navigation Satellite for the U.S. Navy. Reimbursable (DOD). (WSM/C)
Explorer 47 (S)	Delta 90 (S)	Sep 22					375.9	Interplanetary Monitoring Platform, an automated space physics lab to study interplanetary radiation, solar wind, and energetic particles.
1972 73A	Delta 91 (S)	Oct 15	114.9	1453	1446	102.0	34.5	To study the aurora and auroral-weather observation capabilities. Oscar as a piggyback. Reimbursable (ITOS/NOAA, Oscar/AMSAT). (WSM/C)
1972 82A	Delta 92 (S)	Oct 15	114.9	1452	1446	102.0	15.9	First of a series of domestic communications satellites for Canada. Reimbursable (Canada). (WSM/C)
1972 82B	Delta 92 (S)	Nov 9	1457.1	36258	36136	10.8	544.3	Small Astronomy Satellite, carried a gamma ray telescope in a bulbous dome to study gamma rays. Launched by an Italian crew from San Marco. (SM)
1972 80A	Scout 81 (S)	Nov 15		DOWN AUG 20, 1980			186.0	Carried five experiments to investigate the ionosphere, the near magnetosphere, auroral, and solar particles. Reimbursable (ESA). (SM)
Explorer 48 (S)	Scout 82 (S)	Nov 21		DOWN APR 15, 1974			114.0	Carried five experiments to investigate the ionosphere, the near magnetosphere, auroral, and solar particles. Reimbursable (ESA). (SM)
1972 91A	Scout 82 (S)	Nov 21		DOWN APR 15, 1974			114.0	Carried five experiments to investigate the ionosphere, the near magnetosphere, auroral, and solar particles. Reimbursable (ESA). (SM)
ESRO IV (S)	Scout 82 (S)	Nov 21		DOWN APR 15, 1974			114.0	Carried five experiments to investigate the ionosphere, the near magnetosphere, auroral, and solar particles. Reimbursable (ESA). (SM)
1972 92A	Scout 82 (S)	Nov 21		DOWN APR 15, 1974			114.0	Carried five experiments to investigate the ionosphere, the near magnetosphere, auroral, and solar particles. Reimbursable (ESA). (SM)
Apollo 17 (S)	Saturn V (AS-512)GSM- 114LM-12)	Dec 7		LANDED DEC 19, 1972			51685.0	Sixth and last manned lunar landing mission in the Apollo series. (WSM/C)
1972 96A	Scout 83 (S)	Dec 11	107.1	1089	1088	99.8	716.8	Eugene A. Cernan, Ronald E. Evans, and Harrison H. Schmitt. Landed at Taurus-Littrow on Dec 11, 1972. Deployed camera and experiments; performed EVA with lunar roving vehicle. Returned lunar samples. Mission duration 301 hours 51 minutes 59 seconds. (WSM/C)
Nimbus F (S)	Delta 89 (S)	Dec 11	107.1	1089	1088	99.8	716.8	Stabilized, Earth-oriented platform to test advanced systems for collecting meteorological and geological data. (WSM/C)
1972 97A	Scout 83 (S)	Dec 16		DOWN AUG 22, 1973			125.7	Study the state and behavior of the upper atmosphere and ionosphere. Cooperative with Germany. (WSM/C)
AEROS (S)	Scout 83 (S)	Dec 16		DOWN AUG 22, 1973			125.7	Study the state and behavior of the upper atmosphere and ionosphere. Cooperative with Germany. (WSM/C)
1972 100A	Scout 83 (S)	Dec 16		DOWN AUG 22, 1973			125.7	Study the state and behavior of the upper atmosphere and ionosphere. Cooperative with Germany. (WSM/C)
1973								
Pioneer G (S)	Atlas-Centaur (AC-30) (S)	Apr 5		SOLAR SYSTEM ESCAPE TRAJECTORY			259.0	Investigate the interplanetary medium beyond the orbit of Mars, the Asteroid Belt, and the near-Jupiter environment. (WSM/C)
1973 19A	Atlas-Centaur (AC-30) (S)	Apr 5		SOLAR SYSTEM ESCAPE TRAJECTORY			259.0	Investigate the interplanetary medium beyond the orbit of Mars, the Asteroid Belt, and the near-Jupiter environment. (WSM/C)

MISSION/ Initl Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS	WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
				Apogee (km) Perigee (km) Incl (deg)		
Ticard B (AMIK2) (S)	Delta 94	Apr 20	1443.0		544.3	Second domestic communications satellite for Canada.
1973 22A	Delta 94	Apr 20	1443.0		3597.0	Reimbursable (Canada).
Skylab Workshop (S)	Saturn V	May 14		DOWN JUL 11, 1979	71500.0	Unmanned launch of the first U.S. Space Station. Workshop incurred damage during launch. Skylab 2 mission ended in failure on reentry mission.
1973 27A	SA-513 (S)	May 25		LANDED JUN 22, 1973	29750.0	First manned visit to Skylab workshop with Charles (Pete) Conrad, Jr., Joseph P. Kennew, and Paul J. Weitz. Deployed parachute thermal blanket to protect the hull and reduce temperatures within the workshop; freed solar wing that was jammed with debris. Mission duration 672 hours 49 minutes 49 seconds.
206/CSM-116 (S)	Saturn IB	May 25		LANDED JUN 22, 1973	29750.0	Radiation astronomy Explorer to measure low frequency radio noise from galactic and extragalactic sources and light intensity and ultraviolet radiation from stars and galaxies. Reimbursable (NOAA). (WSM/C).
1973 32A	SA-206 (S)	May 25		LANDED JUN 22, 1973	29750.0	Second manned visit to Skylab Workshop with Alan L. Bean, Owen K. Garriot, and Jack R. Louman. Performed systems and operational tests, conducted experiments, deployed thermal shield. Mission Duration 1416 hours 11 minutes 9 seconds.
Explorer 49 (S)	Delta 85	Jun 10		SELENOCENTRIC ORBIT	328.0	Radio Astronomy Explorer to measure low frequency radio noise from galactic and extragalactic sources and light intensity and ultraviolet radiation from stars and galaxies. Reimbursable (NOAA). (WSM/C).
1973 39A	Delta 85	Jun 10		SELENOCENTRIC ORBIT	328.0	Radio Astronomy Explorer to measure low frequency radio noise from galactic and extragalactic sources and light intensity and ultraviolet radiation from stars and galaxies. Reimbursable (NOAA). (WSM/C).
TTOS E (U)	Delta 96	Jul 16		DID NOT ACHIEVE ORBIT	333.8	Adopted NOAA satellite. Reimbursable (NOAA). (WSM/C).
Skylab 3	Saturn IB	Jul 28		LANDED SEP 25, 1973	29750.0	Second manned visit to Skylab Workshop with Alan L. Bean, Owen K. Garriot, and Jack R. Louman. Performed systems and operational tests, conducted experiments, deployed thermal shield. Mission Duration 1416 hours 11 minutes 9 seconds.
207/CSM-117 (S)	SA-207 (S)	Jul 28		LANDED SEP 25, 1973	29750.0	Second manned visit to Skylab Workshop with Alan L. Bean, Owen K. Garriot, and Jack R. Louman. Performed systems and operational tests, conducted experiments, deployed thermal shield. Mission Duration 1416 hours 11 minutes 9 seconds.
1973 50A	SA-207 (S)	Jul 28		LANDED SEP 25, 1973	29750.0	Second manned visit to Skylab Workshop with Alan L. Bean, Owen K. Garriot, and Jack R. Louman. Performed systems and operational tests, conducted experiments, deployed thermal shield. Mission Duration 1416 hours 11 minutes 9 seconds.
Tomtekt IV F-7 (S)	Atlas-Centaur	Aug 23	1452.4		1387.1	Fourth generation satellite to provide increased capacity for Constar's global commercial communications network. Reimbursable (Constar).
1973 58A	Delta 97	Oct 25		ELEMENTS NOT AVAILABLE	397.2	Last interplanetary mission. Reimbursable (NOAA). (WSM/C).
Explorer 50 (S)	Delta 97	Oct 25		ELEMENTS NOT AVAILABLE	397.2	Last interplanetary mission. Reimbursable (NOAA). (WSM/C).
1973 21A	Scout 84	Oct 30	106.2		885	Navigation satellite for the U.S. Navy. Reimbursable (DOD). (WSM/C).
1973 81A	Scout 84	Oct 30	106.2		885	Navigation satellite for the U.S. Navy. Reimbursable (DOD). (WSM/C).
1973 81A	Scout 84	Oct 30	106.2		885	Navigation satellite for the U.S. Navy. Reimbursable (DOD). (WSM/C).
Mariner 10 (S)	Atlas-Centaur	Nov 3		HELIOCENTRIC ORBIT	504.0	Venus and Mercury flyby mission; first dual-planet mission. Photographed the Earth and the Moon on its flight to Venus; Venus encounter (at 5,800 km) on February 5, 1973; Mercury flyby (at 704 km) on March 16, 1974; third Mercury encounter (at 48,069 km) on March 16, 1975. Engineering tests conducted before attitude control gas was depleted and transmitter commanded off on March 24, 1975.
Mariner 10 (S)	Atlas-Centaur	Nov 3		HELIOCENTRIC ORBIT	504.0	Venus and Mercury flyby mission; first dual-planet mission. Photographed the Earth and the Moon on its flight to Venus; Venus encounter (at 5,800 km) on February 5, 1973; Mercury flyby (at 704 km) on March 16, 1974; third Mercury encounter (at 48,069 km) on March 16, 1975. Engineering tests conducted before attitude control gas was depleted and transmitter commanded off on March 24, 1975.
1973 85A	Atlas-Centaur	Nov 3		HELIOCENTRIC ORBIT	504.0	Venus and Mercury flyby mission; first dual-planet mission. Photographed the Earth and the Moon on its flight to Venus; Venus encounter (at 5,800 km) on February 5, 1973; Mercury flyby (at 704 km) on March 16, 1974; third Mercury encounter (at 48,069 km) on March 16, 1975. Engineering tests conducted before attitude control gas was depleted and transmitter commanded off on March 24, 1975.
TTOS F (S)	Delta 98	Nov 6	118.1		1499	Navigation satellite for the U.S. Navy. Reimbursable (NOAA). (WSM/C).
1973 86A (S)	Saturn IB	Nov 16		LANDED FEB 8, 1974	29,750.0	Third manned visit to Skylab Workshop with Gerald P. Carr, Edward G. Gibson, and William H. Pogue. Performed flight experiments; gathered medical data on crew; performed four EVA's. Mission duration 2019 hours 11 minutes 19 seconds.
1973 90A	SA-206 (S)	Nov 16		LANDED FEB 8, 1974	29,750.0	Third manned visit to Skylab Workshop with Gerald P. Carr, Edward G. Gibson, and William H. Pogue. Performed flight experiments; gathered medical data on crew; performed four EVA's. Mission duration 2019 hours 11 minutes 19 seconds.

NASA Major Launch Record

1973

MISSION/ Intr Design	LAUNCH VEHICLE	PERIOD (mins.)	CURRENT ORBITAL PARAMETERS		WEIGHT (kg)	REMARKS	
			Apogee (km)	Perigee (km)			Incl (deg)
Explorer 31 (S) 1973 10/A	Delta 99 (S)	Dec 16	DOWN DEC 12, 1978		683.0	(All Launches from ESMC, unless otherwise noted) Atmosphere Explorer, carried 14 instruments to study energy transfer, atomic and molecular processes, and chemical reactions in the atmosphere. (WSMC)	
1974							
Skynet II A (U) 1974 02A	Delta 100 (U)	Jan 18	DOWN JAN 25, 1974		435.5	Communications satellite for the United Kingdom. Short circuit in electronics package caused vehicle failure. Reimbursable (UK).	
Centaur Proof Flight (U)	Titan III E Centaur (76) (U)	Feb 11	DID NOT ACHIEVE ORBIT			Launch vehicle development test of the Titan III E/Centaur (TC-1). Carried simulated Viking spacecraft and Sphinx. Liquid oxygen boost pump failed to operate during Centaur starts. Destruct command sent 748 seconds after liftoff.	
San Marco C-2 (S) 1974 08A	Scout 85 (S)	Feb 18	DOWN MAY 4, 1976		170.0	Measure variations of equatorial neutral atmosphere density, composition, and temperature. Cooperative with Italy. (San Marco)	
UK-X4 (S) 1974 13A	Scout 86 (S)	Mar 8	100.3	667	97.8	91.6	Three-axis stabilized spacecraft to demonstrate the technology involved in the design and manufacture of this type platform for use on other spacecraft. Reimbursable (UK).
Westar A (S) 1974 13A	Delta 101 (S)	Apr 13	1441.6	35907	8.1	571.5	Domestic communications satellite for Western Union. Reimbursable (MU).
SMS A (S) 1974 35A	Delta 102 (S)	May 17	ELEMENTS NOT AVAILABLE		628.0	Geostationary environmental satellite to provide Earth imaging in visible and IR spectrum. First weather observer to operate in fixed geosynchronous orbit about the Equator. Cooperative with NOAA signals to small, inexpensive ground receivers. Carried over 20 technology and science experiments.	
ATS F (S) 1974 38A	Titan III C Centaur 79 (S)	May 30	1412.1	35440	12.5	1403.0	Applications Technology Satellite capable of providing good quality TV technology and science experiments.
Explorer 52 (S) 1974 40A	Scout 87 (S)	Jun 3	DOWN APR 28, 1978		26.6	"Hawkeye" spacecraft to investigate the interaction of the solar wind with the Earth's magnetic field. (WSMC)	
AEROS B (S) 1974 55A	Scout 88 (S)	Jul 16	DOWN SEP 25, 1975		125.7	German-built satellite to study the state and behavior of the upper atmosphere and ionosphere. Reimbursable (Germany). (WSMC)	
ANS A (S) 1974 70A	Scout 89 (S)	Aug 30	DOWN JUN 14, 1977		129.8	Study the sky in ultraviolet and X-ray from above the atmosphere. Cooperative with the Netherlands. (WSMC)	
Westar B (S) 1974 75A	Delta 103 (S)	Oct 10	1442.2	35828	8.9	571.5	Domestic communications satellite for Western Union. Reimbursable (MU).
UK-5 (S) 1974 77A	Scout 90 (S)	Oct 15	DOWN MAR 14, 1980		130.3	Measure the spectrum, polarization and pulsar features of non-solar X-ray sources. Cooperative with UK. (San Marco)

NASA Major Launch Record

1975

MISSION/ Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS		WEIGHT (kg)	REMARKS
				Apogee (km)	Perigee (km) Incl (deg)		
Arenus F (S)	Delta 111 (S)	Jun 12	107.4	1111	1098	827.0	(All Launches from ESMC, unless otherwise noted) Stabilized, Earth-oriented platform to test advanced systems for collecting meteorological and geological data.
1975 52A							Observe active physical processes on the Sun and how it influences the Earth and its space environment.
1975 57	Delta 112	Jun 21				1088.4	Manned Apollo spacecraft with Thomas P. Stafford, Vance D. Brand and Donald K. Slayton. Rendezvoused and docked with Soyuz 19 spacecraft (also launched July 15, 1975) with Aleksey Leonov and Valery Kubasov on July 17, 1975. Mission Duration 217 hours 28 minutes 23 seconds.
Apollo Soyuz Test Project (S)	Shuttle (S)	Jul 15				14,856.0	Cosmic ray satellite to study extraterrestrial gamma radiation. Reimbursable (ESA).
1975 86A	SA-210 (S)						Mars Orbiter and Lander mission to conduct systematic investigation of Mars. US first attempt to soft land a spacecraft on another planet achieved on July 20, 1976. First analysis of surface material on another planet.
COS B (S)	Delta 113 (S)	Aug 8				277.5	Second joint French-German communications satellite to serve North America, Europe, Africa and the Middle East. Reimbursable (France/Germany).
1975 72A	Triun III (S)	Aug 20				2324.7	Second Mars Orbiter and Lander mission to conduct systematic investigation of Mars. Soft landed on Mars on September 3, 1976. Returned excellent scientific data.
1975 75A	Centaur 88 (S)					571.5	Improved satellite with double the capacity of previous releases for Comsat's global commercial communications network. Reimbursable (Comsat).
1975 75C	Delta 114 (S)	Aug 23	1440.4	35860	35861	402.0	Atmosphere Explorer to investigate chemical processes and energy transfer mechanisms which control the Earth's atmosphere. (WSMC)
1975 77A	Delta 114 (S)	Aug 23	1440.4	35860	35861	402.0	Second in a series of improved navigation satellite for the U.S. Navy. Reimbursable
Viking B Orbiter (S)	Triun III (S)	Sep 9				2324.7	First operational satellite in NOAA's geosynchronous weather satellite system. Reimbursable (NOAA).
1975 83A	Centaur 89 (S)					571.5	Atmosphere Explorer to investigate the chemical processes and energy transfer mechanisms which control Earth's atmosphere.
Viking B Lander							
1975 83B							
1975 83C							
1975 91A	Atlas-Centaur (AC-30) (S)	Sept 25	1441.0	35914	35852	8.1	1515.0
Explorer 54 (S)	Delta 115 (S)	Oct 6				675.0	Atmosphere Explorer to investigate chemical processes and energy transfer mechanisms which control the Earth's atmosphere. (WSMC)
1975 96A	Scout 92 (S)	Oct 12				161.9	Second in a series of improved navigation satellite for the U.S. Navy. Reimbursable
Transit (S)	Delta 116 (S)	Oct 16	1435.7	35601	35756	688.0	First operational satellite in NOAA's geosynchronous weather satellite system. Reimbursable (NOAA).
1975 99A							
SMS-C/GOES A (S)	Delta 117 (S)	Nov 20				719.6	Atmosphere Explorer to investigate the chemical processes and energy transfer mechanisms which control Earth's atmosphere.

NASA Major Launch Record

1978

MISSION/ Initi Design	LAUNCH VEHICLE	PERIOD DATE	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS
			Apogee (km)	Perigee (km)	Incl (deg)		
ISEE-1 (S)	Delta 140	Apr 7	1435.2	35796	11.0	865.0	(All Launches from ESMC, unless otherwise noted)
1978 38A							Japan's Broadcasting Satellite/Experimental for conducting TV broadcast experiments. Reimbursable (Japan).
HCMAR/44A (S)	Scout 8B	Apr 26	DOWN DEC 22, 1981			134.3	Heat Capacity Mapping Mission to test the feasibility of measuring variations in the Earth's temperatures. (WSMC)
1978 41A							Orbital Test Satellite to conduct communications experiments for ESA. Reimbursable (ESA)
OTS-B (S)	Delta 141	May 11	1452.6	36092	8.5	865.0	One of two Pioneer flights to Venus in 1978; was placed in orbit around Venus for remote sensing and direct measurements of the planet and its surrounding environment.
1978 44A							Part of NOAA's global network of geostationary environmental satellites to provide Earth imaging, monitor the space environment, and relay meteorological data to users. Reimbursable (NOAA).
Pioneer/Venus-A (Orbiter) (S)	Atlas-Centaur (AC-50) (S)	May 20	ELEMENTS NOT AVAILABLE			562.0	Dedicated vehicle for monitoring of oceanographic phenomena and features for 60 days of orbiting data. Contact was lost when a short circuit drained all of the batteries. (WSMC)
1978 51A							Third domestic communications satellite for Comsat. Reimbursable (Comsat).
GOES-C/NOAA (S)	Delta 142	Jun 16	1436.0	35808	9.1	635.0	Positioned on magnetic field lines to study the magnetosphere and correlate data with ground station, balloon, and sounding rocket measurements. Reimbursable (ESA).
1978 62A							Second Pioneer flight to Venus in 1978 to determine the nature and composition of the atmosphere of Venus. All four probes and the bus probe went dead upon impact; the day probe continued to transmit for 68 minutes after impact.
Sasat-A (S)	Atlas-F (S)	Jun 26	100.1	765	108.0	2300.0	Monitored the characteristics of solar phenomena about 1 hour before ISEE-A and B to gain knowledge of how the Sun controls the Earth's near space environment. The spacecraft was renamed ICE in 1985 and its orbit was changed to encounter the Comet Giacobini-Zinner on September 11, 1985. Cooperative with ESA.
1978 64A							Third generation polar orbiting environmental spacecraft to provide improved meteorological and environmental data. Operated by NOAA. (WSMC)
Comstar C (S)	Atlas-Centaur (AC-41) (S)	Jun 29	1451.8	36181	6.3	1516.0	Third domestic communications satellite for Comsat. Reimbursable (Comsat).
1978 68A							Positioned on magnetic field lines to study the magnetosphere and correlate data with ground station, balloon, and sounding rocket measurements. Reimbursable (ESA).
GEOS-B/ESA (S)	Delta 143	Jul 14	1449.1	36056	11.1	575.0	Second Pioneer flight to Venus in 1978 to determine the nature and composition of the atmosphere of Venus. All four probes and the bus probe went dead upon impact; the day probe continued to transmit for 68 minutes after impact.
1978 71A							Monitored the characteristics of solar phenomena about 1 hour before ISEE-A and B to gain knowledge of how the Sun controls the Earth's near space environment. The spacecraft was renamed ICE in 1985 and its orbit was changed to encounter the Comet Giacobini-Zinner on September 11, 1985. Cooperative with ESA.
Pioneer/Venus-B (Multiprobe)	Atlas-Centaur (AC-51) (S)	Aug 8	PROBES LANDED DEC 9, 1978			904.0	Third generation polar orbiting environmental spacecraft to provide improved meteorological and environmental data. Operated by NOAA. (WSMC)
1978 79A							Monitored the characteristics of solar phenomena about 1 hour before ISEE-A and B to gain knowledge of how the Sun controls the Earth's near space environment. The spacecraft was renamed ICE in 1985 and its orbit was changed to encounter the Comet Giacobini-Zinner on September 11, 1985. Cooperative with ESA.
ISEE-C (S)	Delta 144	Aug 12	HELIOCENTRIC ORBIT			479.0	Third generation polar orbiting environmental spacecraft to provide improved meteorological and environmental data. Operated by NOAA. (WSMC)
1978 79A							Monitored the characteristics of solar phenomena about 1 hour before ISEE-A and B to gain knowledge of how the Sun controls the Earth's near space environment. The spacecraft was renamed ICE in 1985 and its orbit was changed to encounter the Comet Giacobini-Zinner on September 11, 1985. Cooperative with ESA.
ICE (S)							Third generation polar orbiting environmental spacecraft to provide improved meteorological and environmental data. Operated by NOAA. (WSMC)
Tiros-N (S)	Atlas-F (S)	Oct 13	101.7	845	98.7	1405.0	Third generation polar orbiting environmental spacecraft to provide improved meteorological and environmental data. Operated by NOAA. (WSMC)
1978 86A							Third generation polar orbiting environmental spacecraft to provide improved meteorological and environmental data. Operated by NOAA. (WSMC)

1990 STS-32 (S) 1990 24 Syncom IV-5 (S) 1990 2B	Shuttle (S) (Columbia)	Jan 8	1436.2	36815 35759	2.7 6953.4	Tenth Columbia flight with Daniel C. Broussard, James D. Wetters, Bonnie J. Dunbar, Melissa S. York and Mission Specialist Ellison S. Sizemore. Also commander Gregory B. Boush and payload specialist Judith A. A. Aronson. Deployed Syncom IV-5 (reimbursable) communications satellite for the U.S. Navy. Also commander Ronald D. Dyer and payload specialist Ellison S. Sizemore. Mission Duration: 261 hrs 0 min 37 sec.
STS-36 (S) 1990 19A DOD (S) 1990 19B Pegasus (S) 1990 28A	Shuttle (S) (Atlantis)	Feb 28		LANDED AT EAFB MAR 4, 1990 ELEMENTS NOT AVAILABLE		Star Atlantic flight with John D. Creighton, John H. Casper, David C. Hillers, Richard M. Mulane and Pierre J. Thuid. DOD Mission. Mission Duration: 106 hours 18 minutes 22 seconds.
STS-31 (S) 1990 37A HST (S) 1990 37B	Shuttle (S) (Discovery)	Apr 24	94.1	589 410	94.1	A 50-foot rocket (Pegasus), dropped from the wing of a B-52 aircraft flying over the Pacific Ocean, launched the Pegasus satellite in the first demonstration flight of the Pegasus launch vehicle. The Pegasus investigations are part of the Gamma and Pegasus and Radiation Effects Satellite (CHRES) program with Loren J. Striner, Charles F. Bolton, Bruce McCandless, Steven A. Hawley, and Kathryn D. Sullivan. Deployed the Edwin P. Hubble Space Telescope (HST) astronomical observatory. Designed to operate above the Earth's turbulent and obscuring atmosphere to observe celestial objects at ultraviolet, visible and near-infrared wavelengths. Joint NASA/ESA mission. Mission Duration: 121 hours 16 minutes 6 seconds.
Magellan (S) 1990 43A 1990 43B ROSAT (S) 1990 49A	Scout 113 (S) (S) Delta 2 (S)	May 9 Jun 1	98.3 98.3 95.6	755 752 557	601 600 542	Two Multiple Access Communications Satellites (MACSAT's) to provide global store-and-forward message relay capability for DOD Users (NAFBI Reimbursable (DOD)). Frontier Satellite (ROSAT), an Explorer class scientific satellite designed to observe the sky in the X-ray region. ROSAT mission includes a large X-ray telescope to study X-ray emissions from non-stellar celestial objects. International cooperative program with NASA, Germany, and the UK.
CHRES (S) 1990 55A	Atlas Centaur (AC-99) (S)	Jul 25	614.4	34781 345	18.0	Combined Release and Radiation Effects Satellite (CHRES) which uses chemical releases to study the Earth's magnetic fields and the plasmas, or ionized gases, that travel through them. Joint NASA/DOD program.

NASA Major Launch Record

1990

MISSION/ Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS
				Apogee (km)	Perigee (km)	Incl (deg)		
STS-41 (S) 1990 90A Ulysses (S) 1990 90B	Shuttle (S) (Discovery)	Oct 6		LANDED AT EAFB OCT 10, 1990 HELOCENTRIC ORBIT			20079.5	(All Launches from ES/MC, unless otherwise noted) Eleventh Discovery flight with Richard N. Richards, Robert D. Cabana, Bruce E. Melnick, William M. Shepherd, and Thomas D. Alers. Deployed the Ulysses spacecraft, a joint NASA/ESA mission to study the poles of the Sun and the interplanetary space above and below the poles. Mission Duration: 86 hours 10 minutes 3 seconds. Seventh Atlantis flight with Richard O. Cowy, Robert C. Springer, Carl J. Meade, Frank L. Culbertson and Charles D. Gerner. DOD Mission. Mission Duration: 117 hours 54 minutes 27 seconds.
STS-38 (S) 1990 97A DOD (S) 1990 97B	Shuttle (S) (Atlantis)	Nov 15		LANDED AT KSC NOV 20, 1990 ELEMENTS NOT AVAILABLE				
STS-35 (S) 1990 106A	Shuttle (S) (Columbia)	Dec 2		LANDED AT EAFB DEC 11, 1990				Eleventh Columbia flight with Vance D. Brand, John M. Lounge, Jeffrey A. Hoffman, Robert A. Parker, Guy S. Gardner, Ronald A. Parise, and Samuel T. Durrance. Carried Astro-1, a Space Shuttle attached payload to acquire high priority astrophysical data on a variety of celestial objects. Mission Duration: 215 hours 5 minutes 7 seconds.
1991								
STS-37 (S) 1991 27A GRO (S) 1991 27B	Shuttle (S) (Atlantis)	Apr 5	82.0	376	370	28.5	15900.0	Eighth Atlantis flight with Steven R. Nagel, Kenneth D. Cameron, Linda M. Godwin, Jerome Api, and Jerry L. Ross. An unplanned EVA took place to help with the deployment of GRO's high gain antenna. Also demonstrated were mobility aids which will be used on Space Station Freedom. Mission Duration: 143 hrs 32 min 45 sec.
STS-39 (S) 1991 31A IBSS (S) 1991 31B	Shuttle (S) (Discovery)	Apr 28		LANDED AT KSC MAY 6, 1991 DOWN MAY 6, 1991				Twelfth Discovery flight with Michael L. Coats, Blaine L. Hammond, Jr., Guion S. Bluford, Gregory J. Harbaugh, Richard J. Heib, Donald R. McKonagle, and Charles L. Veitch. Discovery performed dozens of maneuvers, deploying canisters from the cargo bay, releasing and relieving a payload with the RMS, allowing the Department of Defense to gather important plume observation data and information for the SDIO. Mission Duration: 198 hrs 26 min 17 sec.
NOAA-12 (S) 1991 32A	Atlas-E (S)	May 14	101.2	824	806	98.7	1418.0	Third-generation operational spacecraft to provide systematic global weather observations. Will replace NOAA-10 as the morning satellite in NOAA's two polar satellite system. Joint NASA/NOAA effort. (WSM/C)

NASA Major Launch Record

1991

MISSION/INITIAL DESIGN	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (mins)	CURRENT APOGEE (km)	ORBITAL PERIGEE (km)	INCL (deg)	WEIGHT (kg)	REMARKS
STS-40 (S) Space Shuttle (STS-1)	Shuttle (S) (Columbia)	Jun 5		LANDED AT EAFB JUN 14, 1991				(All Launches from ESMC, unless otherwise noted) Twelfth Columbia flight with Bryan D. O'Connor, Sidney M. Gutierrez, M. Rhea Seddon, James P. Baggett, Tanara E. Jernigan, F. Drew Gaffney, and Miles Hughes-Fuller. The first mission since Skylab to do intensive investigations into the effects of weightlessness on humans. Data returned from the flight will be used in NASA's planning for the Space Shuttle program. Mission duration: 218 hrs 15 mins, 14 secs.
REX (S) 1991 45A	Scout (S)	Jun 29	101.3	987	769	89.6	96.7	Radiation Experiment to do further research to overcome and understand the physics of the electron density irregularities that cause disruptive scintillation effects on transionospheric radio signals. (NAFBI) Reimbursable. DOD.
STS-43 (S) 1991 54A TDRS-E (S) 1991 54B	Shuttle (S) (Atlantis)	Aug 2	1436.1	35793	35779	0.0	2226.9	Ninth Atlantis flight with John E. Blaha, Michael A. Baker, James C. Adamson, G. David Low, and Shannon E. Lind. A TDRS satellite was deployed, keeping the network which supports Shuttle Mission and other spacecraft at full operational capability. Mission Duration: 213 hrs 52 mins 27 secs.
STS-48 (S) 1991 63A UARS (S) 1991 63B	Shuttle (S) (Discovery)	Sep 12	96.2	580	573	57.0	6532.2	Fourth Space Shuttle flight with John G. Creighton, Kenneth S. Rehrig, Mark F. Brown, James F. Buchli, and Charles D. Gemar. The Upper Atmosphere Research Satellite (UARS) will study physical processes acting within and upon the stratosphere, mesosphere, and lower thermosphere. Mission Duration: 128 hrs 27 mins 51 secs.
STS-44 (S) 1991 80A DSR (S) 1991 80B	Shuttle (S) (Atlantis)	Nov 24		LANDED AT EAFB DEC 1, 1991				Tenth Atlantis flight with Frederick D. Gregory, Terence T. Herndon, F. Story Musgrave, Mario Runco, Jr., James S. Voss, and Thomas J. Harner. A dedicated mission for the Department of Defense to gather data for their program. Deployed the first Defense program satellite (DSR) until failed on the sixth day of the mission. Mission Duration: 168 hrs 52 mins 27 secs.
1992 STS-42 (S) 1992 2A	Shuttle (S) (Discovery)	Jan 22		LANDED AT EAFB JAN 30, 1992				Fourteenth Discovery flight with Ronald J. Grabe, Steven S. Oswald, Norman E. Thagard, William F. Readdy, David C. Hinners, Roberta L. Bondar, and Jill D. Method. The International Microgravity Laboratory (IML-1) studied the effects of microgravity on living organisms and materials processes. Mission duration: 133 hrs 15 mins 43 secs.

B-123

1992

MISSION/ Intl Design	LAUNCH VEHICLE (S)	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS			WEIGHT (kg)	REMARKS
				Apogee (km)	Perigee (km)	Incl (deg)		
STS-45 (S) 1992 15A	Shuttle (S) (Atlantis)	Mar 24		LANDED AT KSC APR 2, 1992				(All Launches from ESMS, unless otherwise noted) Eleventh Atlantis flight with Charles F. Bolden, Bryan L. Duffy, Kathryn D. Sullivan, David C. Leestma, C. Michael Foster, Dirk D. Scobee, Ellison S. S. Onizuka, K. Lichtenburg. The Atmospheric Laboratory for Applications and Science (ATLAS 1) studied atmospheric science, solar science, space physics and astrophysics. Mission Duration: 214 hrs 10 mins 24 secs.
STS-49 (S) 1992 26A	Shuttle (S) (Endeavour)	May 2		LANDED AT EAFB MAY 16, 1992				First flight of Endeavour with Daniel C. Brandenstein, Kevin P. Chilton, Richard J. Heib, Bruce E. Melnick, Pierre J. Thout, Kathryn C. Thornton, and Thomas D. Akers. On orbit repair of the Intersat VI satellite and delivery of the payload to the Intersat VI satellite. Mission Duration: 213 hrs 17 mins 38 secs.
EUVE (S) 1992 31A	Delta II (S)	Jun 7	95.1	529	514	28.4	3250	The Extreme Ultraviolet Explorer (EUVE), designed to study the extreme ultraviolet (EUV) portion of the electromagnetic spectrum as well as selected EUV targets, in order to create a definitive map and catalog of nearby sources.
STS-50 (S) 1992 34A	Shuttle (S) (Columbia)	Jun 25		LANDED AT KSC JUL 9, 1992				Twelfth Atlantis flight with Richard N. Richards, Kenneth D. Bowersox, Ronald J. Curcio, and Michael J. Smith. The first flight of the Shuttle-Delta II combination. The first United States Microgravity Laboratory (USML-1) studied scientific and technical questions in materials science, fluid dynamics, biotechnology and combustion science. Mission duration: 331 hrs 30 mins 4.8 secs.
SAMPX (S) 1992 38A	Scout (S)	Jul 3	96.6	679	509	81.7		First of the Small Explorer (SMEX) fleet, carrying four cosmic ray monitoring instruments, to study solar energetic particles, anomalous cosmic rays, galactic cosmic rays, and magnetospheric electrons.
GEOTAIL (S) 1992 44A	Delta II (S)	Jul 24	4750.6	508542	41363	22.4	1009	Geotail will study the interaction between the United States and Japan to study the geomagnetic tail. Geotail will also measure the physics of the magnetosphere, the reconnection and neutral line formation to better understand magnetospheric processes.
STS-48 (S) 1992 49A EURECA 1992 49B	Shuttle (S) (Atlantis)	Jul 31		LANDED AT AUG 8, 1992				Twelfth Atlantis flight with Loren J. Shriver, Andrew M. Allen, Jeffrey A. Hoffman, Franklin R. Cheng-Diaz, Claude Nicollier, Marsha S. Ivins, and Franco Malenba. Deployed ESA's European Retrievable Carrier (EURECA), a platform placed in orbit for 6 months offering conventional experiments. Teased Enhanced Satellite System (TSS-1), a joint program between the United States and Italy. Mission duration: 191 hrs 16 mins 7 secs.

NASA Major Launch Record

1992

MISSION Init Design	LAUNCH VEHICLE	LAUNCH DATE	PERIOD (Mins.)	CURRENT ORBITAL PARAMETERS Apogee (km)	Perigee (km)	Incl (Deg)	WEIGHT (kg)	REMARKS (All Launches from ESMC, unless otherwise noted)
STS-47 (S) (SpaceLab-J) 1992 61A	Shuttle (S) (Endeavour)	Sep 12		LANDED AT KSC SEP 20, 1992				Second Endeavour flight with Robert L. Gibson, Curtis T. Brown, Mark C. Lee, N. Jan Davis, Mae C. Jemison, Jerome Aji, and Ronald McNair. The SpaceLab J mission, a joint mission between the U.S. and Japan, performed a series of 43 extravehicular activities (EVAs) to maintain in the microgravity of space, and the study of 190 kg (420 lbs) of 23 sacs, organisms in the environment, duration 180 days. 23 sacs, U.S. French Satellite to help compare relationships between the Earth's oceans and climate. NASA mission.
Tesoro-Procedon (S) 1992 52A	Anane 42P (S)	Aug 10	112.4	1342	1390	66.0		U.S. French Satellite to help compare relationships between the Earth's oceans and climate. NASA mission.
Mars Observer (S) 1992 63A	Titan III (S)	Sep 25		TRANS-MARTIAN TRAJECTORY				After an 11-month cruise, the Mars Observer (MO) will arrive at Mars and be placed into orbit to examine the surface for elemental and mineralogical composition, global surface topography, gravity field and magnetic field determination and climatological conditions. The Mars Balloon Release (MBR), on the Mars Observer, will relay communications from Mars landers that will be sent by the Russians in 1995.
STS-52 (S) 1992 70A LAGEOS (S) 1992 70B	Shuttle (S) (Columbia)	Oct 22	222.5	5860	5618	52.7		Thirteenth Columbia flight with James D. Weinberger, Michael A. Baker, William M. Shepard, Tamara E. Jernigan, and Charles L. Veach. The Laser Geodynamics Satellite (LAGEOS) is a cooperative mission of the U.S. and Italy to obtain precise measurements of the crustal movement and gravitational field. The U.S. Microgravity Payload 2 (USMP-2), carried in the cargo bay, is one in a series of payloads for scientific experimentation and material processing in a reduced gravity. Mission duration: 236 hrs 56 mins 13 secs.
MSTI-1 (S) 1992 72A STS-53 (S) 1992 80A	Scout (S) Shuttle (S) (Discovery)	Nov 21 Dec 2	91.2	378	282	96.7		DOD/SNO payload Fifteenth Discovery flight with David M. Walker, Robert Cabana, Guion S. Bluford, James Voss, and Al Richard Clifford. This was a DOD mission. Mission duration: 175 hrs 19 mins 47 secs.
